

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. REPORTS

OF

THE MAYOR, DIRECTORS

AND

CITY OFFICERS.

VIEW OF THE LAKE FRONT.

Showing Pile and Timber Protections at Erie Street Where Improvements Are Now in Progress.

Mayor's Message.

CLEVELAND, April 18, 1898.

To the Honorable Council:

GENTLEMEN.—It is wisely provided that at least once a year a statement shall be made to you and through you to the public reciting the condition of our municipality, its departments and institutions, and communicating such plans and recommendations as may be formulated by the executive branch of the City Government for your future consideration and the mutual advantage of your various constituencies. The city is a business corporation in which every taxpayer is a stockholder, each sharing alike the privileges of citizenship and having a like voice, regardless of wealth or distinction, in directing the general management of affairs. Only when this broad view is taken can any city administration accomplish proper results, and only on this basis can all the people receive that to which they are justly entitled.

The past year has been one of substantial progress for Cleveland. No city in the United States, I believe, can show a better record for industrial and commercial growth, for interior improvements or for the rapid accumulation of civic strength. Cleveland has been favored with a revival in business which has benefited alike the manufacturers, the merchants and the toilers. The health of the people has been good, statistics showing a marked decrease in the mortality lists. Our population has steadily increased until there can be no doubt that this city is the metropolis of Ohio, and is fast approaching in importance and greatness the first cities of the land.

The attention of the City Administration during the year has been directed largely to the pushing of work on the important

municipal enterprises started by it early in its career, among which are the widening and deepening of the Cuyahoga river and improvements on the lake front, the building of the new east side water tunnel, the construction of the intercepting and Walworth Run sewers, the provision of a sanitary system of garbage disposal, the building of the Willson avenue viaduct and the Willow street bridge and other notable undertakings, all of which have for many years been agitated by the people and urgently demanded for the good of the city. The securing of legislation and the laying of plans for the commencement of work on a new City Hall is an accomplishment now assured as the result of patriotic assistance rendered the Administration by all public-spirited citizens. All of these subjects are, however, considered in detail in their proper order.

In concluding the work of the year, I would be ungrateful did I not express my thanks to the retiring members of the Council for the assistance they have rendered in the conduct of city business. It is my hope that the Administration during the coming year may merit and receive the friendship and aid of the new Council in promoting such measures as will be for the interest of the people and the continued and permanent advancement of our municipality.

PUBLIC FRANCHISES.

In my message, one year ago, special prominence was given to the subject of franchises, and as this continues to be the most vital of all the pending municipal issues, I will again give it the precedence which I believe it deserves. During the year the situation has materially improved in so far as the danger of the granting of a long-term franchise to the street railway companies is concerned, this improvement having been brought about by the repeal of the vicious Rogers' fifty-year franchise law at Columbus at the outset of the present session of the Legislature. The hearty support of the administration was given to the movement to wipe this law from the statute books, and it was done with unanimity, to the great satisfaction of the residents of Cleveland whose interests were directly affected. No attempt to re-enact the law or any similar measure has been made, so that it is

effectually killed. Had it not been for the vigorous opposition of the administration and the public generally to the application of this law to Cleveland, in other words, had the street railroads been given their way, this city would in all probability be now bound by a fifty-year mortgage of its public streets as is our sister city of Cincinnati.

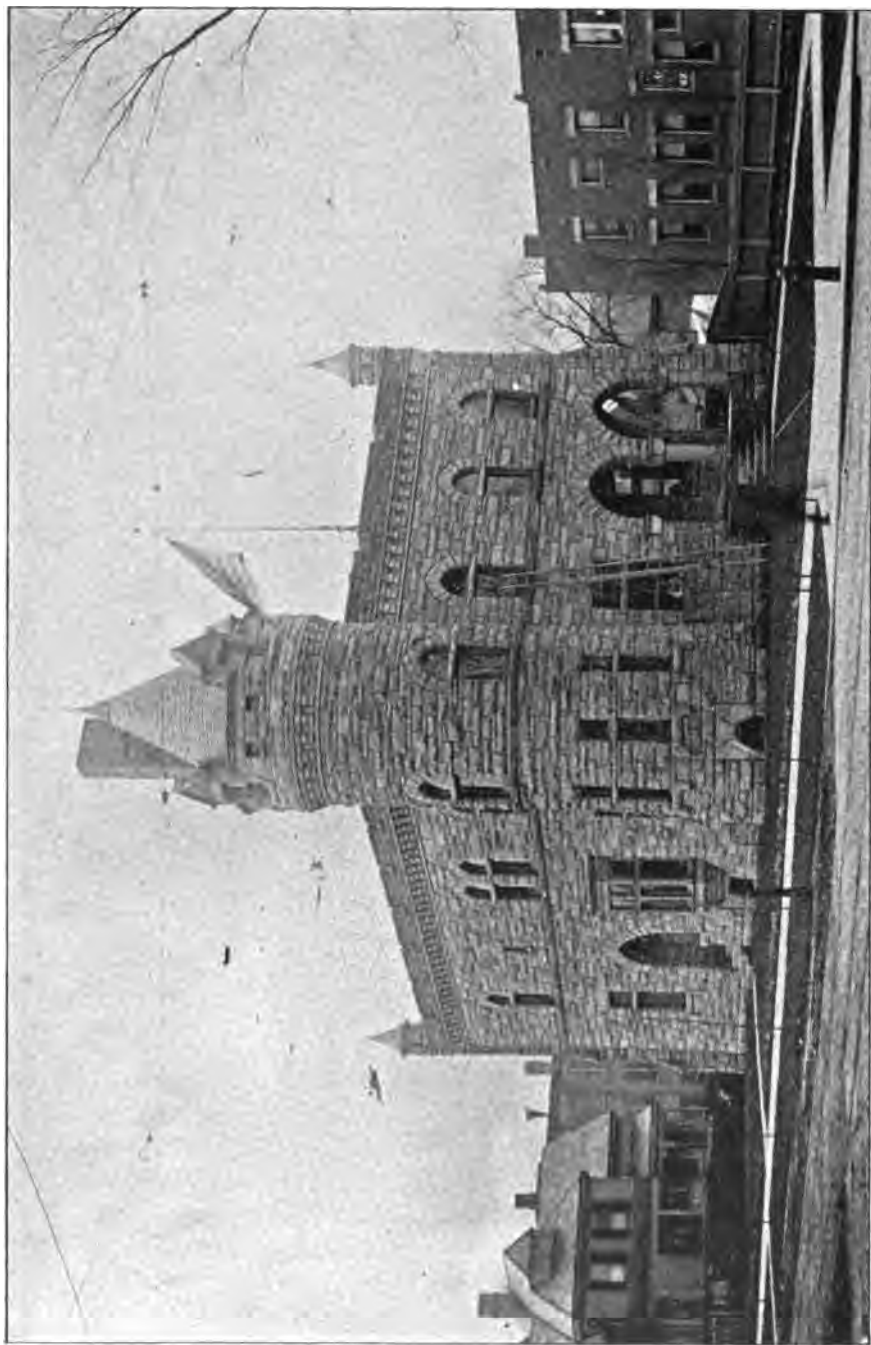

To obtain from the street railroad and other corporations a just return for the valuable privileges granted is, without question, the unanimous desire of the masses of the people. This was the most important question the retiring Council had to consider and will probably be the most important to come before the Council which has just been seated. Corporations are naturally anxious to hold fast all they have received, no matter how freely it has come, and to reach out for all they can get regardless of popular rights. Every effort to oppose this policy is met with all the power which they are capable of wielding. This fact was clearly demonstrated during the last year in what was the most remarkable campaign ever waged in this city for lower street car fares. Believing that the people were entitled to better arrangements with the street railroad companies than now exist, such belief being founded upon reservations made in the original grants to the companies which gave the city the right to reduce fares, an ordinance was introduced in the Council last August to lower the rate of fare on the Woodland avenue line, the intention being to follow this with other ordinances under similar reservations. The ordinance provided originally that the cash fare should be four cents, except between 5 and 8 o'clock in the morning, and 4:30 and 7 o'clock in the evening when it should be three cents. The companies, by the terms of the ordinance, were to sell eight tickets for twenty-five cents between 5 and 8 o'clock in the morning and 4:30 and 7 o'clock in the evening, and six tickets for twenty-five cents at other times. A substitute ordinance, was, however, drawn to comply with the ruling of the Law Department that different rates of fare could not be legally fixed under existing grants for different hours, and this substitute was pronounced legal. It provided for a four cent cash fare and the sale of seven tickets for twenty-five cents. Great public interest was manifested in the progress of the measure, meetings being held nightly in various parts of the

MAKING CITY LAND ON THE LAKE FRONT AT ERIE STREET.

city. While the ordinance was pending, a committee was appointed by the Council to investigate the books of the Cleveland City Railway Company, and having done so to make a report. A joint committee of the Council and Board of Control was also constituted to consider the ordinance, and held numerous meetings attended by representatives of the railway companies. Owing to the reported disposition of the companies to compromise with the city and yield a just return for its privileges, a special committee consisting of the Mayor, Director of Law, Director of Accounts and three members of the Council was appointed to receive propositions. It was soon found that no concessions would be made by the companies on any basis except that of a new franchise covering all lines for twenty-five years from date. The report of the committee's deliberations with certain correspondence relating thereto was made to the Council on October 4, 1897, when a vote was finally taken on the ordinance. Notwithstanding the public demand for the passage of the measure it was lost by a tie vote. An effort was made to reconsider the vote at a subsequent session and again on October 18, but those efforts likewise failed by a tie vote, the reasons for which were apparent to all.

The city was then put on the defensive by the introduction of a most iniquitous ordinance late in October, providing for the granting of a twenty-five-year franchise, the companies to sell six tickets for twenty-five cents and pay a percentage of gross receipts into the City Treasury, namely, three per cent. for the first eight years, four per cent. for the eight years following, and five per cent. for the concluding nine years, the city, however, to relieve the companies from all paving obligations. So great was the opposition among the people to the passage of this ordinance that it was withdrawn and referred on December 13, 1897, to a Commission to be composed of representatives from the Chamber of Commerce, the City Government and the street railways. The Chamber of Commerce and City Government appointed their representatives, but the street railways refused to co-operate. A second low-fare ordinance was introduced in the Council on November 8, 1897, relating to the Euclid avenue and Cedar avenue lines, but action on this was also delayed pending the outcome of the joint committee's investigation.

NEW FOURTH PRECINCT POLICE STATION, CORNER WILLSON AVENUE AND PERKINS AVENUE.
(This Station Was Built Within Estimate and Appropriation.)

There seems to be no valid reason why the city should not test its rights under existing franchises, which are subject to the State law, and thus settle the question once for all whether the companies are absolute in their control of affairs or whether the people's rights shall not prevail. I trust that steps will again be taken at the proper time to do this, believing that the people are looking to the present Council, which was elected mainly on this issue, for better results than have heretofore been obtained. There should not, in my judgment, be granted any extension or renewal of the present franchises until the expiration of the shortest one in 1904. Then, if renewed, all should expire at the same time. The reasons for this are many and have been clearly exploited heretofore. As for the policy of the Administration during the coming year it is perhaps only necessary to say that it will be the policy which has always been maintained, namely, that no new franchise shall be granted by the city without an adequate return, and that each citizen shall be accorded every benefit obtainable under those now existing. In the latter connection I believe the companies should be compelled to run sufficient cars to provide seats for each passenger and abolish the pernicious custom of overcrowding.

In the four years which this subject has been under my special thought and observation, I have concluded that it would be well for the Council to consider whether the time has not come when the city should prepare to own the roadbed and tracks in its streets and lease the use of the same to the bidder which will give the most for the privilege and render the best service. Many cities are now considering this question, realizing that franchises are among the most valuable rights any city can possess, and that if properly handled for the general welfare, instead of the private enrichment of the few, a great deal of benefit may accrue to every citizen. If thus put up at public auction and sold to the highest competitive bidder, the franchises of the City of Cleveland, instead of bringing \$6,600 by way of car licenses as now, would undoubtedly yield over a million dollars annually, to say nothing of the advantage of lower fares and the marked reduction in the general tax rate which this income would allow.

Although the street railroad companies have complied quite generally with the demand that their cars be equipped with vestibules for the protection of motormen and gripmen, it was found in February that some cars were still running without such equipment. These cases were investigated and reports were made to the Prosecuting Attorney of the County with a view to securing indictments against the companies, should the law not be immediately complied with. The procedure had the desired effect, the cars having been equipped with vestibules at once so that now the vestibuling of cars may be said to be entirely complete.

The recognized wisdom of establishing a comprehensive and complete underground conduit system for police, fire alarm, telegraph and telephone wires leads me to advise that steps be taken at once for the construction of such system by the city to be owned by it, and space therein to be leased at fixed rentals to the Companies desiring to share its use. It is necessary that this matter should receive attention without delay if it is to be properly handled. Practically all of the wires in the down-town district are now underground, and as the city grows and expands the need of an adequate conduit system becomes more and more apparent. In addition, I believe the city can and should receive a return from this class of corporations for use of the streets as well as from the surface railroads.

THE LAKE FRONT CASES.

In order to terminate, if possible, the long-standing dispute between the city and various railroad corporations over the ownership and control of a portion of the lake front, the administration early in August decided upon a plan which was submitted to your Honorable Body in a special message, in which you concurred, providing for the appointment of a special legal commission, consisting of Judge George L. Phillips and Hon. James Lawrence to co-operate with the Law Department and proceed with the settlement of the differences, and forever establish the rightful ownership of the lake front property. These attorneys at once entered upon the duties assigned them and have made monthly reports to the Council indicating the pro-

gress made. After careful deliberation it was decided to take up the case involving the tract of land constituting a part of Bath street and lying east of the Cuyahoga river and press it for trial in the Court of Common Pleas. In the spirit of fairness, however, counsel for the Pennsylvania Company, the Lake Shore R. R. Co., the C. C. C. & St. L. R. R. Co., and the Cleveland and Pittsburgh R. R. Co., defendants, were invited to a conference to see if an amicable adjustment could be made. The result of this conference was unsatisfactory and preparations were continued for a trial of the case. A few days prior to the day set for the hearing, without notice to the city, the Pennsylvania Company filed in the United States Court a petition and affidavits for the removal of the case to that Court for trial, and such request was granted, the defendants alleging that because of prejudice and local influence it could not obtain justice in the State Courts. An application was made by the City's attorneys to remand the case to the State Courts, but this was refused, and it will therefore be necessary to try the case in the Federal Courts. Whatever the outcome, it is important that the rights involved may be settled once for all. It is expected that a decision may be reached within the next few months and this troublesome question be disposed of.

FINANCIAL STATEMENT.

The past year has been one of great financial gain to our city, and it affords the administration no little pleasure to be able to make so good a report. With a cash balance at the opening of the current year of \$1,988,126.37; with Sinking Funds whose par value amounts to \$2,156,820.90; with a net excess of assets over all liabilities of \$28,633,578.60; with all bills paid and no floating indebtedness or overdrawn accounts, Cleveland is to-day looked upon from all quarters as an example of a gilt edge municipality. This fact is clearly shown by the activity which bond buyers from all over the country have displayed in bidding for the city's bonds when such have been placed on sale. Cleveland bonds are four-per-cents, while only a few years ago all bonds were sold at par with an interest charge of from six to seven per cent. Cleveland bonds are not "payable in gold" as are the bonds

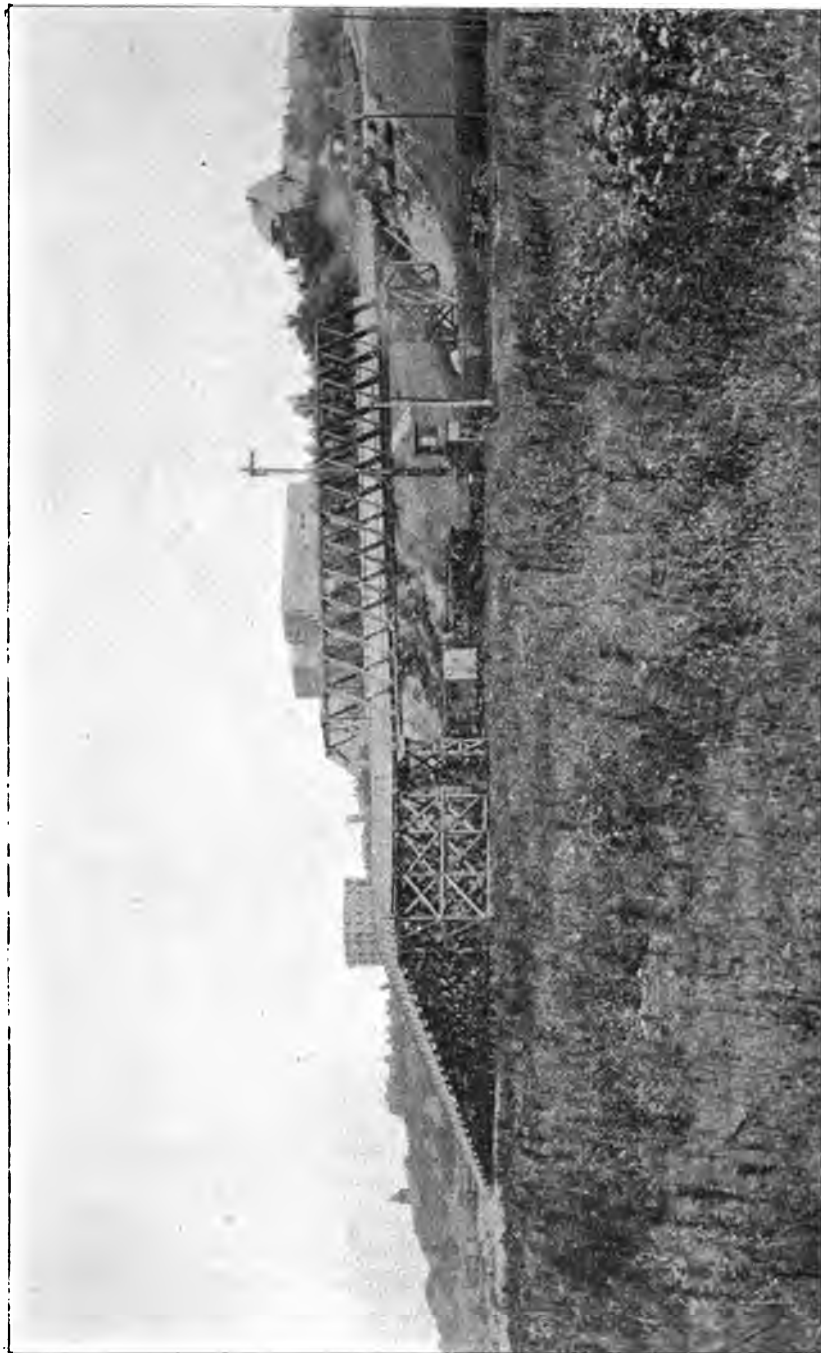

NEW ENGINE HOUSE No. 26, KINSMAN STREET.
First Engine House Built in This City Within Estimate and Without "Extras."

of many of the other American cities, but are sustained by the faith and credit of our city alone. Nevertheless, the premiums offered upon them have been such as to bring the net rate of interest to be paid upon them down to $3\frac{1}{2}$ per cent. Particular notice is called to the fact that while our bonds are selling at premiums requiring that we pay only $3\frac{1}{2}$ per cent. interest, yet the depositories in which the city funds are placed are paying us 3.26 per cent. interest on the average daily cash balances in bank, and after the first of July next under our contract made in December, 1897, the interest rate will be 3.37 per cent. on same, or, in other words, *we are earning a greater rate of interest on the money which the city has on deposit than the city is required to pay on the bonds which it has issued.* In this respect Cleveland occupies a unique and gratifying position.

The Auditor's report shows an increase in the Treasury cash balance at the end of the year of \$178,023.44; an increase in the Sinking Funds of \$148,015.84; an increase in the total assets of the city of \$2,981,340.09. By way of explanation it may be said that while bonds and notes *for public improvements* were issued to the amount of \$2,111,960.00, yet at the same time it has been the policy of the administration to pay off maturing obligations instead of refunding them as has been the usual custom heretofore. Old bonds and notes were redeemed and cancelled in 1897 amounting to \$786,594.66, so that the excess of assets over all liabilities at the close of the year is \$28,633,578.60, as formerly stated, or a net gain during the year of \$1,653,430.75. The issue of bonds and notes above mentioned were as follows:

For Extension of Water Works Tunnel and Plant,	\$ 200,000.00
For River Widening.....	250,000.00
For Intercepting Sewer, Walworth Sewer and other	
Main Sewers.....	498,000.00
For Construction and Re-construction of Bridges..	244,000.00
For Park Purposes	600,000.00
For Street Improvements, (paving, sewers, etc.)...	319,960.00
	<hr/>
	\$2,111,960.00

There has been a systematic and persistent cutting down of expenses in every department and a large increase in the earnings or income of the city outside of taxes. Notwithstanding

WOODEN BRIDGE TO THE LAKE AT SENECA STREET.

Used For Passage of Carts and Wagons to the Location Where the Filling is Under Way.

the fact that the water works plant has been largely increased, entailing an additional expense of nearly \$15,000 that the increase to the Police Force necessitated an annual additional expense of \$25,000, and that the increase in the annual expense of maintenance of parks was over \$42,000, all of which was necessary, nevertheless this has been fully offset by the lessening of expenses in other directions. There has been a marked decrease in the cost of operating the Bridge, Market, Sanitary, House of Correction and other departments, despite the gradual increase in population of the city and the consequent increase of demands made upon these departments, this being clearly indicated by reference to a few of the departments where important reductions are now permanently established. The House of Correction still continues to be more than self-supporting, showing a profit for the year 1897 over and above all expenses of \$4,813.81. The Water Works yielded a net profit of \$370,029.92; the markets a profit of \$38,231.07, and the cemeteries a profit of \$2,591.93.

The amount paid for interest in 1897 (deducting accrued interest received on sale of bonds) was \$484,563.91, as against \$476,638.29 in 1896; \$528,747.96 in 1895, and \$533,255.37 in 1894. In 1898 the interest to be paid will be \$468,197.90, or a smaller amount than for any of the years named, notwithstanding the fact that during the last three years more and greater public improvements have been made than for twenty years previous. It will be seen by this that no increase of the tax rate on account of interest, as has been suggested by some of the opponents of the large public improvements now under way, need be feared or expected. During the last three years bonds and notes have been redeemed and paid amounting to \$4,264,237.98, nearly all of which have been bearing 5 and 6 per cent. interest, and some as high as 7 per cent. The class of bonds which have been issued during the present administration have been for permanent public improvements and are at a low rate of interest and made payable in from 20 to 30 years, while heretofore bonds were largely issued for general purposes and at higher rates of interest. The burden upon the people, as was stated in the last Annual Message, will not be increased to any appreciable extent on account of such improvements.

At this point I desire to contradict certain false statements made by opponents of these improvements to the effect that the administration has caused the tax rate to rapidly increase. It is only necessary to refer to the facts in the case to disprove such claims. In making the analysis of the present tax rate of \$29.30 per \$1,000 valuation it should be borne in mind that it is the *composite rate* for state, county, school, library and city purposes, and that the administration is concerned only in the levy for *municipal purposes*. The comparisons of the municipal levy show that the tax rate for municipal purposes *has been cut down* the past year from \$13.75 per \$1,000 valuation on the duplicate in 1897, to \$13.60 per \$1,000 valuation in 1898. *This is the lowest levy for municipal purposes in 20 years except the rate in 1886 and 1892.* In 1886 bonds were issued for paving, while in 1892 no levy was made for paying off any of the bonded indebtedness. The increase in the total levy has come from county and school and library sources. In proof of this the following table is presented giving a comparison of the levies for the past 18 years :

Year.	State Levy per \$1000.	County Levy per \$1000.	School and Library Levy per \$1000.	City Levy per \$1000.	Total Levy per \$1000.
1880.....	\$2 90	\$2 90	\$4 75	\$15 75	\$26 30
1881.....	2 90	2 90	4 75	14 05	24 60
1882.....	2 90	3 00	4 75	14 15	24 80
1883.....	2 90	2 90	6 25	15 75	27 80
1884.....	2 90	2 30	6 20	14 20	25 50
1885.....	2 90	2 60	6 25	14 35	26 00
1886.....	2 90	2 50	6 25	13 15	24 80
1887.....	2 90	2 80	6 45	16 15	28 30

1889.....	2 70	2 80	6 45	16 45	27 90
1890.....	2 70	2 80	8 35	15 45	28 30
1891.....	2 45	3 45	6 95	15 45	28 30
1892.....	2 75	3 85	7 45	13 45	27 50
1893.....	2 75	3 95	7 55	13 65	27 90
1894.....	2 75	4 05	7 65	13 65	28 10
1895.....	2 75	4 15	7 90	13 70	28 50
1896.....	2 84	4 18	8 50	13 70	29 20
1897.....	2 84	4 25	8 60	13 60	29 30

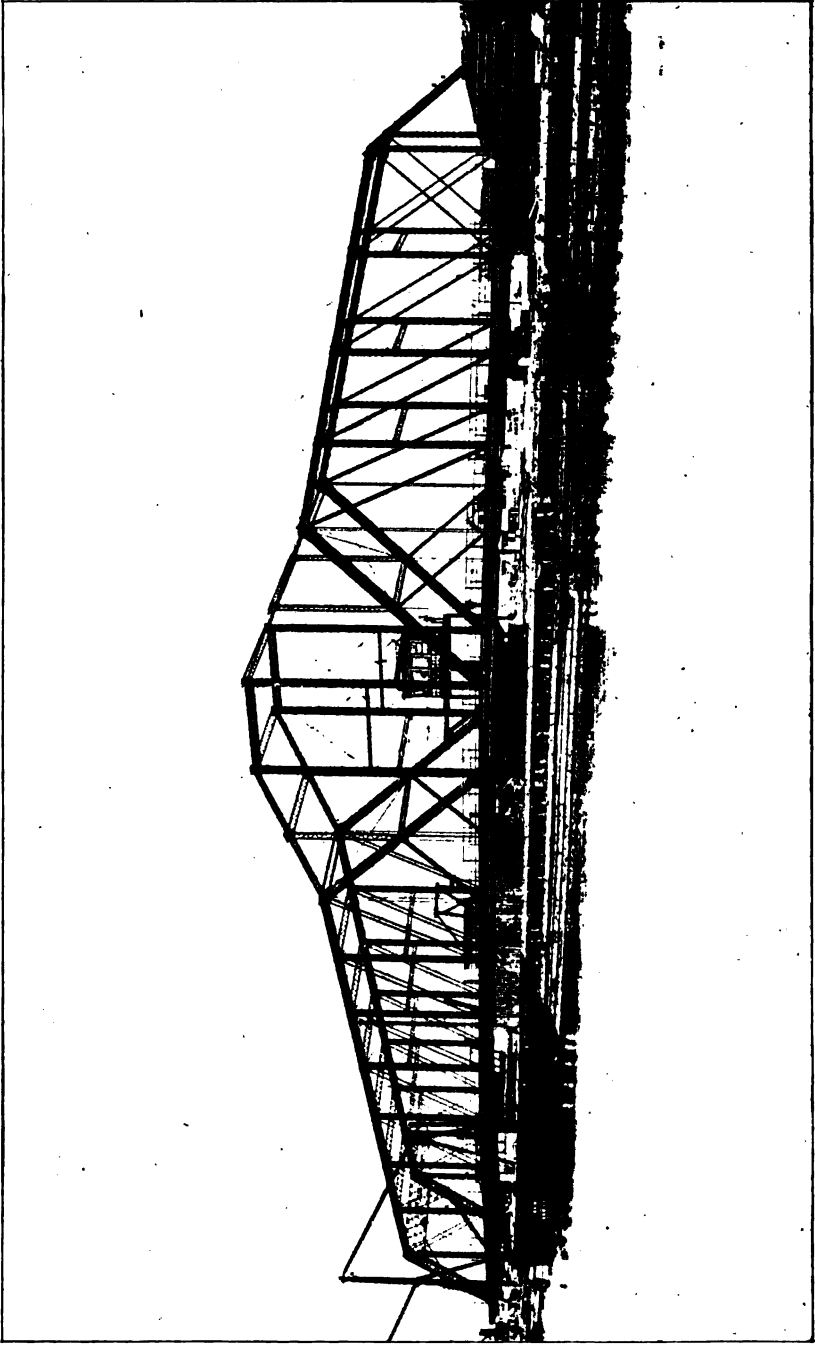

It will be noticed from the above that the total levy for 1898 is 29.30 as compared with 29.20 last year. While the county levy has increased \$.10 and the school levy \$.10 per \$1,000 of valuation the city levy has decreased \$.10, which kept the net increase down to \$.10. The total tax levy of \$29.30 is made up as follows, based on each \$1,000 of valuation: State purposes, \$2.84;

county purposes, \$4.26; school purposes, \$8.10; library purposes, \$.50, or a total of \$15.70, and for city purposes, \$13.60. The city levy of \$13.60 per \$1,000 of valuation is made up as follows: General, \$.85; bridge, \$.32; street, \$.89; police, \$1.58; sanitary, \$.28; fire, \$3.29; dredging, \$.10; lighting, \$1.55; street intersections, \$.44; interest, \$1.10; parks, \$1.00; paving, \$.40; general sinking fund, \$.85; viaduct sinking fund, \$.95. *The assertion that the City Administration has laid a heavier burden of taxes upon the people is therefore erroneous, misleading and unwarranted. If the improvements are carried on in the same business-like way as has characterized their conduct thus far, there is no reason why they should cause any increase in the tax rate, as we are paying off the city's obligations as they become due, and are issuing bonds for improvements only as the same progress.*

PUBLIC IMPROVEMENTS.

The era of needed public improvements for the City of Cleveland inaugurated by this administration in 1895 has been steadily advanced, the preceding year having been one of the most important in our city's history. The conduct of these improvements, being of such vital importance to the citizens at large and involving an expenditure of such a large amount of money, was recently submitted to a representative committee of tax payers for their investigation. This committee was organized at a meeting held on January 22, 1898, the following well-known business men being members: Messrs. Lea McBride, J. W. Conger, Henry W. S. Wood, A. A. Jackson, C. J. Manix, Milton Morton, Edward Wiebenson, T. W. Hill, John Meckes, L. N. Weber, Jacob Steinfeld, Wilson M. Day, Julius Feiss, C. W. Chase, Judge F. E. Dellenbaugh, Col. A. T. VanTassel, Hon. M. A. Foran, M. G. Watterson, Judge E. J. Blandin and N. A. Gilbert, Esq.

After some deliberation it was thought best to divide the examination into two parts and refer the question of river and lake front improvements and sewer improvements respectively to separate committees. This was done and after mature deliberation reports were presented, approving the expenditures made and ac-

THE NEW WILLOW STREET BRIDGE.
Showing Bridge as swung.

counting the results accomplished fully commensurate with the outlay of funds. Recommendations were then made for additional bond issues to continue these improvements and steps were forthwith taken in the General Assembly to obtain the necessary legislation. As the result of the joint efforts of the administration and these commissions, authority has been granted the city to issue bonds necessary for carrying on the work so that the coming season promises to be an exceptionally busy one in advancing these great enterprises and bringing most of them to completion. In the following statement an endeavor is made to outline what has been done up to date in reference to these improvements.

LAKE FRONT IMPROVEMENTS.

In recent years the demand for landing places on the Lake Front both east and west of the Cuyahoga river has been constantly increasing. In order to meet this demand and at the same time utilize what is considered the greatest natural advantage possessed by this city, the administration took this question up and worked out permanent plans which were approved by the River and Lake Front Commission and presented to the Council providing for the elaborate improvement of the eastern portion referred to. These plans comprised the building of a northern approach to the bridge across the railroad tracks at Erie street and the extension of a double pier out into the lake for a distance of about 1,300 feet ; the building of a bridge across the railroad tracks at the foot of Seneca street, fully half a mile west of Erie street and the construction of a pier also at this point; the connecting of the ends of these piers by pile and timber protections built parallel with the shore line, thus making a vast inclosure to be filled in with dirt and other refuse material hauled from various parts of the city in wagons across the bridges and dumped at the water's edge, the ultimate design being to some day have land which will be owned by the city extending from the present shore line northward to where will stand docks with slips between them sufficient for large vessels to lie alongside. Special progress has been made during the year in advancing these improvements at Erie street. The twenty-foot pier has been extended into the lake

along the easterly line of Erie street about 600 feet beyond the point where work was left off last year at a cost of \$17,531.96, and now ends about 1,144 feet from shore. The pile and timber protection has been completed from Erie street westerly to a point 731 feet west of Erie street; and is designed to protect the land being made at this point from being washed away and carried out into the harbor. This protection is a requirement of the government authorities. In the neighborhood of \$11,685.00 has been expended on the work, of which \$4,200 was applied to it last season. It is estimated that not less than 175,000 cubic yards of earth have been deposited in the lake at the foot of Erie street already, thus adding nearly four acres of valuable property to Lake View Park without cost to the city, except for labor in spreading the earth. The entire made land between the future docks and the present shore line will approximate $64\frac{1}{4}$ acres, and may eventually be made into a magnificent park or pleasure ground. It is the desire to continue the improvements at this point as rapidly as possible, and to this end special attention will be given to them during the coming season when an effort will be made to complete the extension of the pile protection to Seneca street and build two docks for the landing of excursion boats and other craft. The outlay of money required for this great undertaking, while considerable, will, nevertheless, be an investment which will more than pay the city in the great value of the land thus acquired for dockage purposes, to say nothing about the vast acreage which can be utilized for a Lake Front Park.

The building of docks at Willson avenue is another enterprise which it is hoped may be taken up during the coming year. The natural facilities at this point for both freight and passenger traffic are apparent at a glance and it would no doubt be very satisfactory if steps should be taken to supply the already pressing demand for access to boats by this route.

RIVER WIDENING.

The former cramped and narrow condition of the channel of the Cuyahoga river within the business district of the city is fast disappearing. With the aid of the last legislative appropriation the city has been enabled to prosecute extensive improvements

which have added greatly to the city's shipping facilities, and have placed Cleveland more nearly on a par with its maritime competitors.

The administration in accordance with its plans regularly adopted through the River and Lake Front Commission and approved by the Council, has proceeded to improve the channel section by section beginning at the river's mouth. It was early decided that it would be best to provide one large adequate outlet rather than continue the two smaller ones, this portion of the river being thronged and wholly overtaxed during the season of navigation by large ore and lumber vessels some of which pass through it on their way to the old river docks and others on their way to the lumber and ore docks farther up, and by the many passenger and merchant vessels and pleasure boats going to and fro on their daily trips. In carrying out this project the city has been aided by land conveyed to it by the Lake Shore & Michigan Southern Railway Company in connection with the railway bridge transaction at the old river bed. A great deal of time has been consumed and a large amount of money has been expended in the acquiring of other property at the mouth of the river desired for this improvement, but all the parcels except that owned by the Pennsylvania Company have been obtained by the city, and all land north of the Pennsylvania Company's section to the mouth of the river has been presented to the Government which is now ready to proceed through the Government Engineer, Col. Jared A. Smith, as soon as an opportunity will allow to extend the river mouth to twice its present width. The refusal of the Pennsylvania Company to make terms with the city for its parcel of land has resulted in much dissatisfaction and already we have started operations which are now pending in Washington, which may bring the matter to a successful issue. Extensive improvements in the old river bed are being made by the Lake Shore & Michigan Southern Railway Company, under an agreement with the city whereby the company is permitted to build a steel bridge and permanently maintain it instead of building a swing bridge as originally provided in an old ordinance passed by the Council. An opening has been made for this bridge over the channel to the lake and the bridge is now nearing completion. It will be 100 feet long, spanning a 60 foot channel for boats and

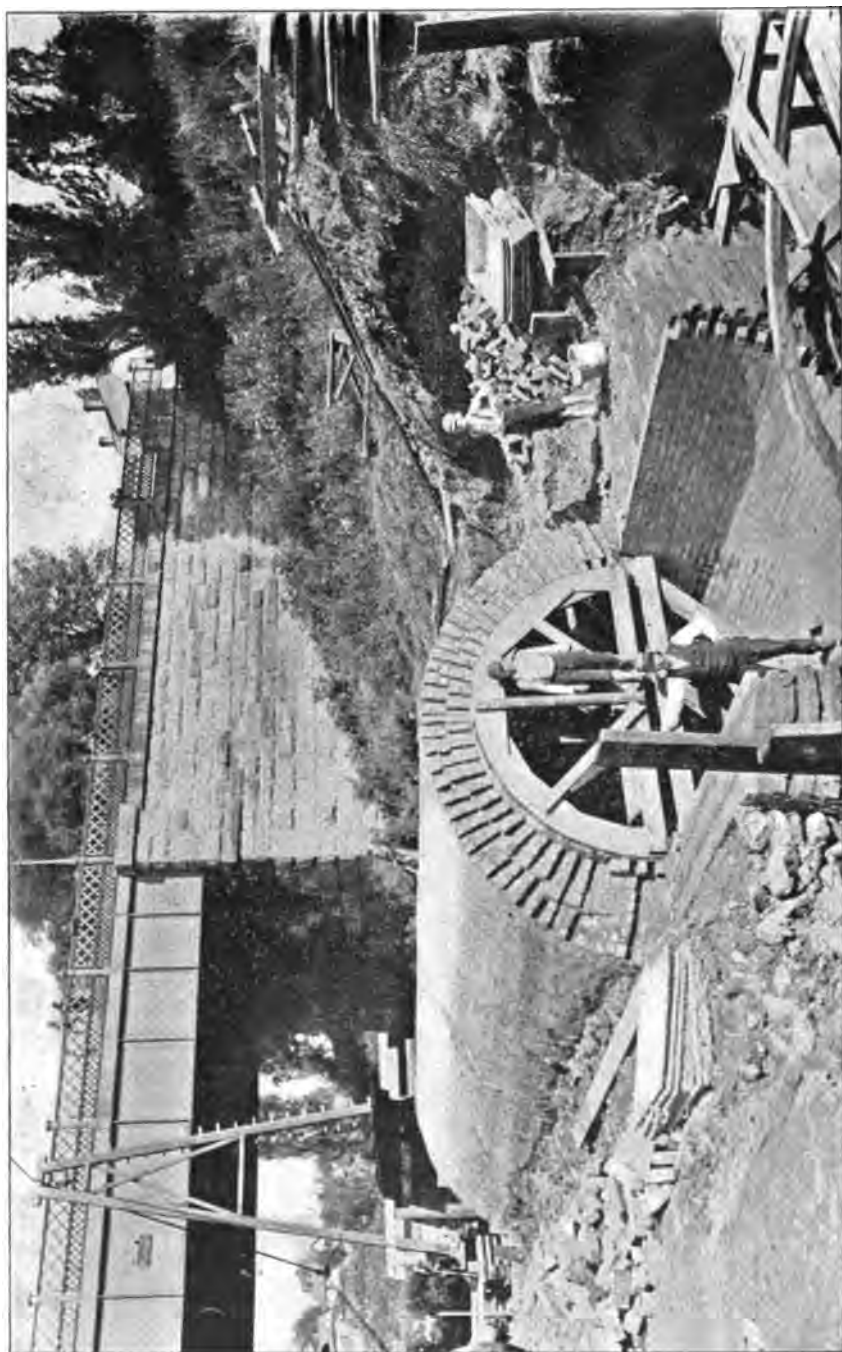

CUYAHOGA RIVER NORTH OF THE SUPERIOR STREET VIADUCT.
Extent of Widening Shown by New Dock and Remnant of Old on West Side of Channel.

a 40 foot passageway for public travel. Furthermore, the company is constructing a winding place for vessels 350 feet long and 150 feet wide with no expense to the city. The settlement of the controversy in regard to opening the old river bed into the lake by having a swing bridge near the lake nets the city \$377,000, and we believe the citizens quite generally approve the plan to have one wide and adequate mouth to the Cuyahoga river instead of two shallow and inadequate mouths. In addition to this the United States Government has already built one new dock on the east side of the mouth of the river and will build a new dock on the new west line, and will remove its harbor line some 450 feet farther up the river, thus saving the city over \$2,000.00 annually for dredging.

During the summer of 1897 the work of removing old docks and dredging the channel between Main street bridge and the Superior street viaduct was undertaken and completed, making the channel 86 feet wider for a distance of 400 feet, and an average of 60 feet wider for a distance of 480 feet. This means an average width of channel of 276 feet in comparison with 180 feet in the narrowest place as formerly. This section has been provided with new and improved docks and is now of sufficient width to allow several of the largest vessels to pass to and fro at one time in safety, thus relieving the congested condition in a portion of the channel which has been under public condemnation for many years, owing to its narrowness, and the danger of accident as well as the constant delay and annoyance to traffic.

In the upper river new docks have been built and the river widened and dredged between Seneca and Mahoning streets, making it an average of 142 feet wide instead of an average of 100 feet. The channel was also projected last year to a point farther up than ever before, enabling vessels to reach the docks of the various provision companies, an accomplishment appreciated by all concerned. The entire channel of the river from its mouth to the Jefferson street bridge on the south was dredged a foot deeper and from 30 per cent. to 50 per cent. wider in 1897 than ever before, greatly increasing its utility for the passage of vessels.

The work contemplated for next year comprises the completion of piers at and near the mouth of the river, land for which

SECTION OF WALWORTH SEWER.
View Showing Side of Structure.

is now practically acquired; the widening of the river from Center street under the Viaduct to the Old River Bed; the straightening of Collision Bend; the straightening of the channel at Jefferson street, and other minor improvements in the upper channel. With these accomplished no further improvements in the Cuyahoga river will probably be needed for many decades to come.

INTERCEPTING SEWER SYSTEM.

Marked progress has been made during the last year and a half in advancing work on the comprehensive intercepting sewer system recommended for the proper drainage of the city by the expert sanitary commission in 1895. This system is to consist of a large trunk sewer extending along the entire lake front from opposite limits of the city, and a central trunk sewer bisecting the city and connecting with the lake front interceptor, the outlet for the system being located east of the city and far removed from the source of the water supply. A portion of this great conduit known as the West End Interceptor was undertaken early last summer and completed from Alger street to Lake avenue, a distance of about a mile. This section is seven and a half feet in diameter.

It is proposed to complete the construction of the intercepting sewer on the West Side next season by continuing an additional section west from Alger street to Waverly avenue with a temporary outlet at Waverly avenue to Lake Erie. We are now ready to let the contract for the construction of the western terminus of the interceptor from the intersection of the Lake Shore & Michigan Southern Railway and Lake avenue, west on Lake avenue to the city limits. This interceptor will receive the output of a large number of lateral main sewers and will afford permanent relief to the overcrowded and inadequate sewer facilities for the entire section of the city west of Waverly avenue, as well as relieving a considerable section east of said street, in fact, all of that territory west of Pearl street and north of Lorain street, giving it permanent and adequate sewer privileges. In addition to the work contemplated on the West Side for the year 1898, the construction of a portion of the intercepting sewer east of the river will also be undertaken and completed.

Land for the terminal works several miles east of the city was acquired last winter, and the construction of the terminal facilities will be effected soon. The building of the interceptor from the city terminal point to Doan street will be pushed as rapidly as possible, and a lateral main interceptor will be constructed in Doan street from St. Clair street south, giving permanent relief to the entire eastern and southeastern sections of the city. Another section of the east interceptor which it is intended to build next season is that between Muirson and Water streets. This portion of the business section of the city has long been in need of relief, nearly all of the down-town sewers being wholly inadequate to the demands made upon them. By pushing to completion the sections of the intercepting sewer thus referred to a long stride will have been taken, and at the same time relief will be afforded, through the construction of lateral sewers, to those portions of the city which are now in greatest need of it.

WALWORTH SEWER.

While a portion of the money obtained from the bond issue authorized two years ago has been expended on the Western Interceptor, by far the greatest part has been devoted to the building of the Walworth street sewer. This sewer is to be three miles in length and for purposes of convenience in building has been divided into four sections, three of which are now under contract and partially completed. Its diameter will vary from 8 to 16½ feet, the sewer being designed to take storm water and sewage from a large part of the West and South Sides, or an area nearly one-sixth of the entire city. The foundation and a portion of the side walls are of concrete and the remaining parts of the sewer of brick. It will be interesting to our citizens generally to inspect this sewer and gain a correct idea of the benefit it will be to this thickly populated section of the city. The three sections will be finished, it is confidently expected, by the end of 1898. The cost of the entire improvement was originally estimated at nearly \$900,000.00, but bids have been much less and it is now estimated to cost about \$730,000.00. Owing to the magnitude of this sewer and the great volume of water that it will at times carry, the specifications call for better and different

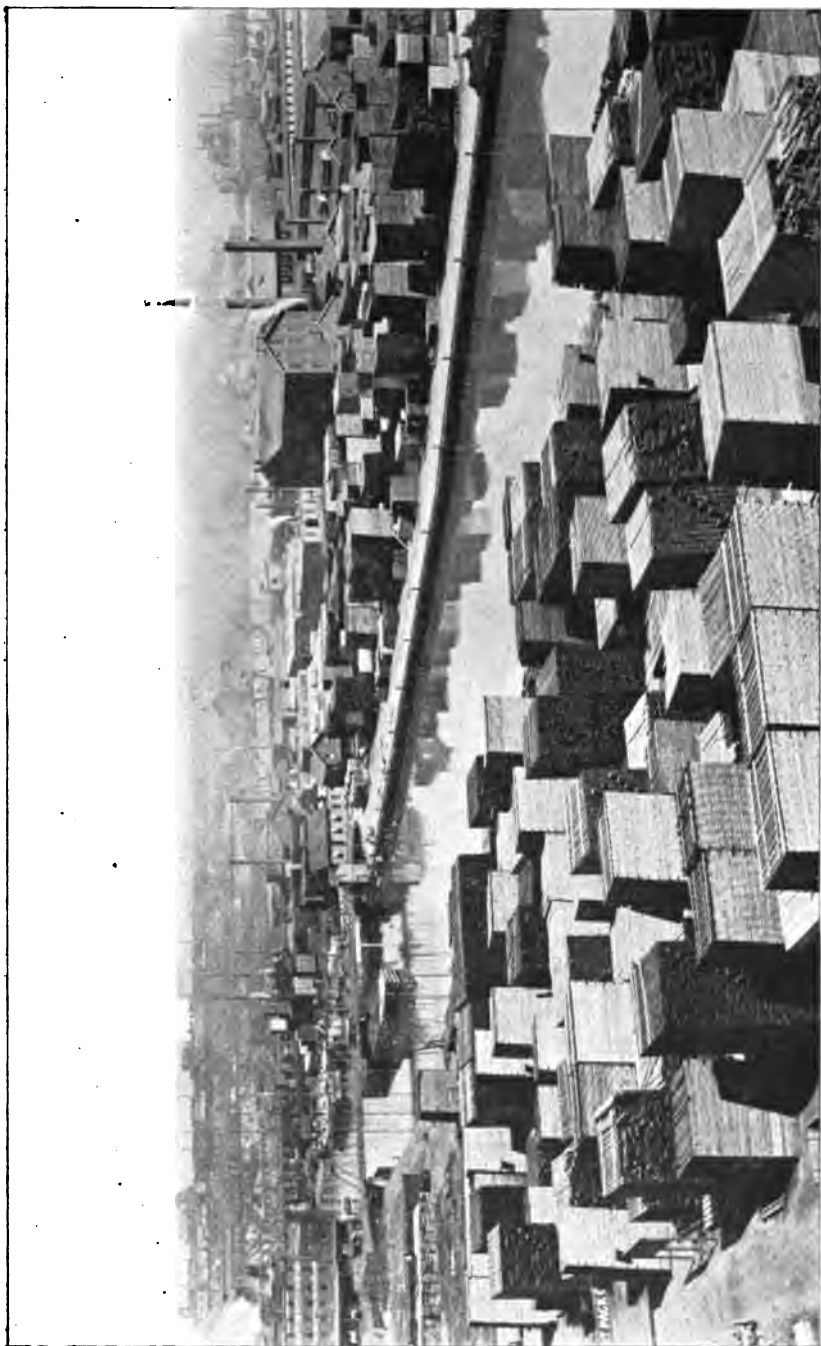

material and workmanship than has ever before been required on sewer work in this city. A testing laboratory has been opened in one of the rooms connected with the office of the City Engineer for testing all materials used in the work.

DIVERSION OF GIDDINGS BROOK.

One of the most troublesome problems with which the present administration has had to deal has been the affording of relief to the residence and business territory contiguous to Giddings Brook. Every spring and fall this stream has frequently overflowed its banks, flooding the neighboring cellars and highways, and menacing the public health in that section of the city as well as doing great damage to property. Various plans for doing away with this difficulty have been considered with the result that the Engineering Department has decided that the brook should be diverted into Doan Brook. In order to provide for the necessary funds, a bill was recently drafted and presented in the Legislature and passed authorizing a bond issue of \$50,000 for this purpose. It will be the aim of the administration to undertake and complete the work the present season, thus affording needed relief to the Cedar avenue, Woodland avenue, Euclid avenue, Superior street and St. Clair street sewers which are now taxed beyond their capacity. The cost of the improvement will be small compared with the increased value of the property affected as well as the general benefit to a valuable section of our city.

THE NEW WATER TUNNEL.

Authority was granted the city by the last legislature to build a new water tunnel in accordance with the recommendation of the expert sanitary commission for providing a purer supply and giving insurance against a possible water famine. A site of seven acres for a new pumping station was obtained at the foot of Coe street on the East Side, and bids were received for the tunnel to extend five miles into the Lake from this point. Work was commenced on October 10, 1896, and has been advanced at an average rate of ten feet per day from a shaft over 100 feet deep near the water's edge. In order to facilitate its construction a tem-

UPPER SECTION OF CUYAHOGA RIVER.

View of a Busy Manufacturing and Shipping Center.

(The Easterly Dock Has Been Set Back Thirty-five Feet Between Seneca Street and Mahoning Street.)

porary wooden crib filled with stone was sunk on May 27, 1897, at a distance of 11,600 feet from shore, and a similar crib likewise located on September 8, 1897. The contract for a steel inlet crib, which is to form the terminal facilities of the tunnel, was let in December and the crib is now nearing completion. The tunnel is 9 feet in diameter and work therein is conducted under air pressure. It is estimated by the contractor that a year and a half or two years at the farthest will be required for the completion of the tunnel. A portion of the expense of this improvement is being supplied from earnings of the Water Works Department, and it will not be necessary to ask for any additional legislation in its behalf. The building of the tunnel is of great importance to the health of our citizens, and they would be well repaid for a visit to it, the experience of traveling far out into the lake being at the same time novel and interesting.

GARBAGE DISPOSAL.

A great deal of attention has been given in recent years to the provision of a sanitary means of disposing of the garbage and refuse of Cleveland. The consideration of this problem has been in the hands of a committee of citizens, consisting of Mr. J. G. W. Cowles, Mr. J. W. Conger, Dr. W. H. Humiston, Mr. Kaufman Hays, Mr. Henry W. S. Wood, and Councilmen Palmer, Stinchcomb and McKenney.

A tour of inspection was made to other cities early in 1897 by a special committee which presented an exhaustive report on the result of its observations. Bonds were issued under authority granted by the last Legislature to the amount of \$100,000, and bids were three times received. On the first and second occasions, all bids were rejected, but on the third it was decided that the bid of The Buckeye Refuse and Destruction Company was as near satisfactory as could be obtained, and this Company will undertake to carry out a five years' contract with the city. Although the matter was handled very carefully some members of this Commission, namely. Mr. Cowles and the Mayor, were not entirely satisfied to permit the letting under the last bid, but it will doubtless work all right, as the city has the option of owning the plant at the expiration of the contract in 1903. Although

WILLSON AVENUE HIGH LEVEL VIADUCT AT NICKEL PLATE RAILWAY.

Eleven Hundred Feet Long. Total Cost \$108,000, of Which the Cleveland Electric Railway Company Paid \$10,000, the Nickel Plate Railway Company \$80,000, and the City \$8,000.

there has been little mention of the Company's intentions regarding their contract, assurances have been given the city that preparations are under way for beginning active operations, and that the collection, removal and disposition of garbage under the contract will be started before the opening of summer.

WILLSON AVENUE VIADUCT AND OTHER BRIDGES.

It is with considerable satisfaction that the Administration is able to announce the completion of the viaduct over the Nickle Plate tracks at Willson avenue, which the city has been attempting to build for twenty years. This viaduct is a steel and iron structure 1,100 feet long, extending from Francis to Julia street, and spanning a valley formerly traversed by thousands of pedestrians and teams each day. The Nickle Plate Railway Company was induced to construct the greater portion of this bridge, at a cost of \$90,000. The Cleveland Electric Railway Company also contributed \$10,000 towards the project, this company desiring to cross the bridge with its tracks.

Some delay in the completion of the bridge was necessitated by the failure of the contracting companies to obtain structural material, but this was quickly forgotten in the general feeling of happiness, when the bridge was formally opened for public travel on March 3, 1898.

The Willow street bridge, crossing the old river bed a short distance from its opening into the Cuyahoga river and connecting what is known as Whisky Island with the mainland, was also completed during the year. The new bridge replaced a temporary wooden structure built in 1889 and intended for a few years' use. The old bridge rested on a center pier near the middle of the channel and was only 6½ feet above the surface of the water. The new bridge rests on a pier located on the north side of the channel, leaving a clear opening of 138 feet for the passage of vessels as against 70 feet as formerly. It has a swing span of 295 feet and is operated by two thirty-five horse power motors, Its cost was \$67,000.00 with \$26,100 added for the purchase of land.

During the coming season it is intended to undertake the construction of the Willett street viaduct; the Martin Praha

street bridge; the Center street bridge; the Warner Road arch and culvert; and the reconstruction and repair of other bridges under the legislative appropriation of \$250,000.00 granted at this session of the General Assembly.

NEW CITY HALL.

After many years of waiting and almost despairing our citizens can soon point, we confidently expect, to a new and modern City Hall. No city improvement is more urgently needed than this. The present rented quarters are a disgrace, being illy fitted for the use to which they are put, and at the same time a source of great expense to the city. When it is understood that the plan adopted for the erection of the new building will relieve the taxpayers of any burden on this account the outlook is doubly gratifying.

Two years ago the people decided by vote to locate a City Hall on the northeast section of the Public Square, but the matter was almost immediately taken into Court by injunction suits, and finally the repeal of all legislation on the subject was obtained by the opponents of this site. Since that time negotiations have been in progress for the securing of another suitable location, and there is reason to believe that such site may be obtained without much difficulty. Already the arrangements are made under existing contracts and ordinances by which bonds issued for City Hall purposes may be cared for by the application of the receipts from the Gas Companies to the city.

In order that the entire matter might be carefully considered and discussed, a Committee on City Hall was recently appointed by the Mayor consisting of well known business men who held various meetings for deliberation. This committee consisted of Messrs, J. W. Conger, Jacob Perkins, Wilson M. Day, V. C. Taylor, T. W. Hill, W. J. Gleason, Henry W. S. Wood and Julius Feiss. The committee on February 28, 1898, unanimously adopted a report setting forth that the present rented quarters were wholly unfit to meet the demands of today, and that the unsafe condition of the public records demanded that immediate steps be taken to secure them against loss by fire

or other cause. It was also shown that the city had paid out for rents, taxes and repairs from 1874 to the present time over \$1,050,000,

In regard to the ways and means for obtaining a City Hall the committee advised that the receipts from the Gas Companies be applied to this purpose, stating that these receipts (provided equally as good a contract as the existing one could be made with the Company at the time the present contract expires in 1902) would be amply sufficient to pay interest and principal on a bond issue of \$1,500,000 if we should at the present time issue that amount bearing 4 per cent. interest and payable in 20 years. A bill was drawn in accordance with these conclusions, and was introduced in the General Assembly and passed on April 6, 1898. It provides for the appointment of a non-partisan commission, which shall have immediate control of the plans. Now that the way has been opened for supplying the city with a suitable municipal building, action should be taken at once to complete the steps necessary for the commencement of work, and every effort will be made to do this as rapidly as possible.

This is an improvement in which all classes of citizens feel a justifiable pride, the present City Hall having been an eye-sore for many years. The scheme of obtaining the funds will, I believe, also meet with general approval.

THE DEPARTMENTS.

Great care has been exercised by the heads of departments during the last year to cut down the city's running expenses and to increase the efficiency in all branches of the public service. Closer attention has been given by the Directors to these matters than ever before, as the result of which all of the departments are enabled to make an exceptional showing. It is due the members of the Board of Control that I should express my appreciation for their faithful application to duty and the interest they have manifested in the general conduct of administrative affairs. So far as I know matters have proceeded in perfect harmony, and still better results may be anticipated for the coming year.

The accomplishments in each of the departments are briefly outlined in the following review, based upon their annual statements.

DEPARTMENT OF LAW.

An unusually large amount of litigation has occupied the attention of the Law Department during the year. The volume of the city's legal business is constantly increasing, requiring the limit of effort on the part of the city's attorneys. The number of papers prepared and approved by the Department for the year ending December 31, 1897, was 1,937 as against 1,429 for the year previous. The number of cases disposed of during the year was 175, and the number of cases pending in the various courts January 1st, 1896, was 157 as against 148 for January 1st, 1897. The record of the Department in handling damage suits for the interest of the city was fully sustained, the amount received by claimants being only \$5,363, while the amount sought to be recovered was \$222,938.84.

DEPARTMENT OF PUBLIC WORKS.

The past year has been a very busy one in the Department of Public Works. Besides the supervising and managing of public improvements, comprising those on the lake front, river widening, the intercepting sewer, the Walworth sewer, the new water tunnel, the Willson avenue viaduct, the Willow street bridge and other undertakings heretofore referred to, this department has carried on a vast amount of general city work such as paving, sewer building, laying water pipe, street cleaning, etc. The most notable of all these accomplishments, however, has been the general reduction of contract prices, saving thousands of dollars to the tax payers. One year ago it was thought that the reduction then announced could hardly be improved upon, but it is a pleasure to again call the attention of citizens to still better tables of comparisons for the year just closed. The prices now being paid for various kinds of work and material are greatly reduced over those paid a few years ago, and are in keeping with the policy announced at the outset of this administration that special attention would be paid to this feature of the city's expenditures. In order that a proper idea of these reductions may be gained, the comparisons which I am about to give have been made to cover the three years of the present administration as compared

with the three years preceding it. Although the present administration came into power in 1895 some of the contracts under which it operated for that year were made under the preceding administration. One feature of public work in which the prices have been noticeably lessened is that of cleaning paved streets. Formerly the contract was let at so much per mile instead of per square of 10,000 square feet as at present. The comparisons have been figured on a basis of 17 squares to the mile, this being as near as it is possible for the engineers to get at the average squares to the mile of streets. Following is a statement showing the prices paid per square of 10,000 square feet for cleaning paved streets for the three years preceding this administration and the three years covered by this administration.

CLEANING PAVED STREETS.

Average price of wet cleaning per square for three years under contracts made by previous administrations (First District) \$3.34; (Second District) \$3.10; (Third District) \$2.88.

Average price of wet cleaning per square for three years under contracts made by present administration (First District) \$1.15; (Second District) \$1.24; (Third District) \$1.11.

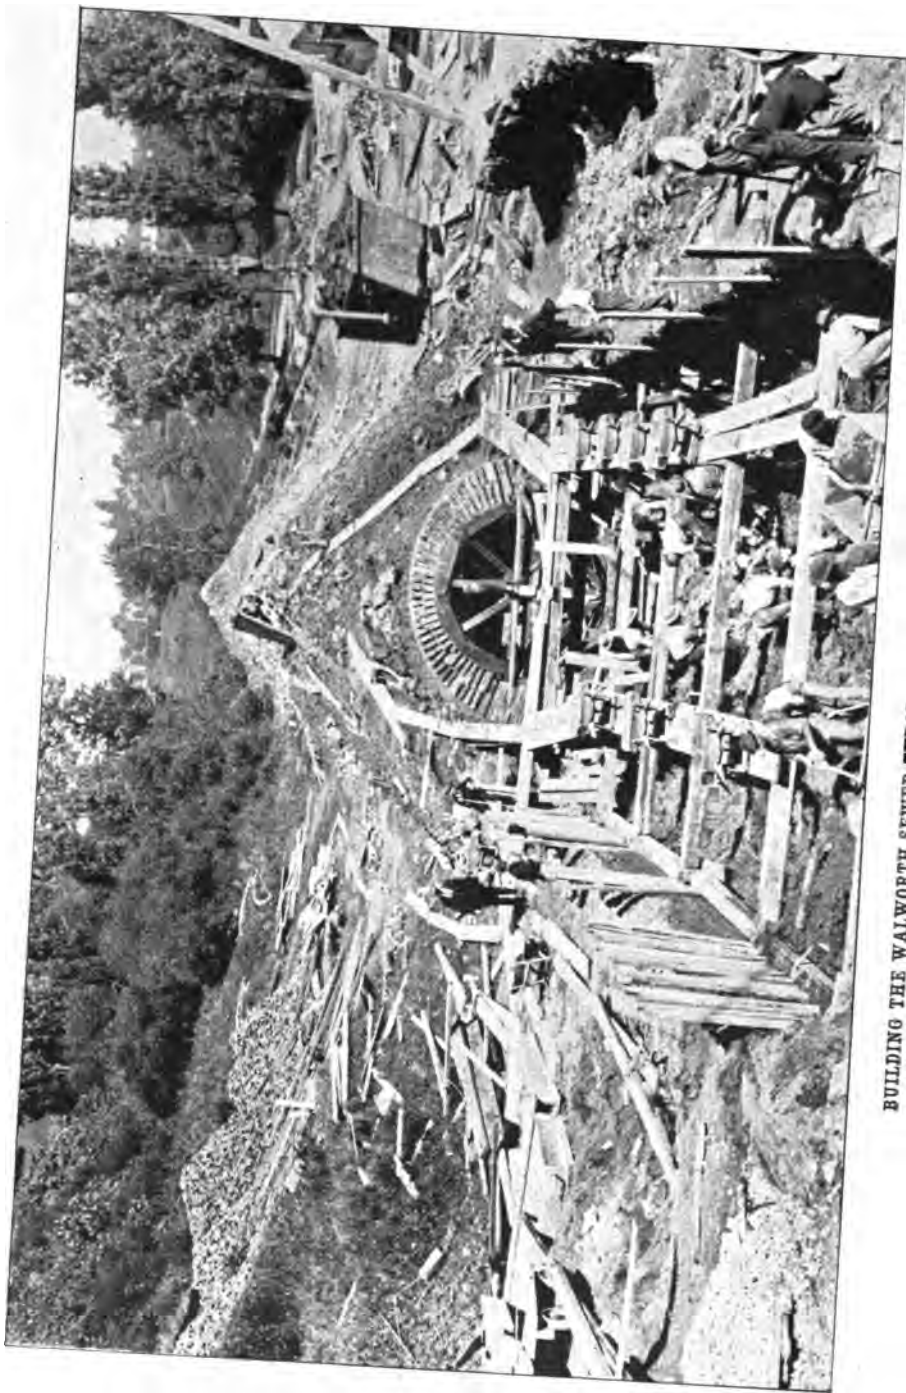

Average price of sweeping per square for three years under contracts made by previous administrations (First District) \$1.95; (Second District) \$1.88; (Third District) \$1.87.

Average price of sweeping per square for three years under contracts made by present administration (First District) \$1.08; (Second District) \$1.04; (Third District) \$1.07.

General average of price per square for cleaning and sweeping paved streets exclusive of gutter cleaning for three years under contracts made by former administrations, all Districts, \$2.50 per square.

General average of price per square for cleaning and sweeping paved streets, exclusive of gutter cleaning for three years covered by contracts made by present Administration, all districts, \$1.20,

Price of gutter cleaning per square for the year 1895 (no contracts were made for 1893 and 1894) under contract made by previous Administration, (First District) \$1.48; (Second District) \$1.00; (Third District) \$1.00.

BUILDING THE WALWORTH SEWER THROUGH THE VALLEY OF WALWORTH RUN.

Average price of gutter cleaning per square for three years under contracts made by present Administration, (First District) \$0.53; (Second District) \$0.61; (Third District) \$0.64.

The contract prices for 1898 are astonishingly low, being as follows: First District—Wet cleaning, \$0.20 per square; sweeping, \$1.00 per square; gutter cleaning, \$0.10 per square. Second District—Wet cleaning, \$0.49 per square; sweeping, \$0.87½ per square; gutter cleaning, \$0.35 per square. Third District—Wet cleaning, \$0.59; sweeping, \$0.95; gutter cleaning, \$0.42.

CLEANING CATCH BASINS.

Another department of city work in which a great saving has been rendered the public by the reduction of contract prices is that of cleaning catch basins, the prices for the last six years being shown in the following table:

	1893	1894	1895	1896	1897	1898
For each catch basin cleaned.....	\$0.81	\$0.79	\$0.70	\$0.60	\$0.49	\$0.47

The average cost for each catch basin cleaned for the three years under contracts made by former administrations was \$0.77, while that for the three years under the present administration was only \$0.52.

CAST IRON LAMP POSTS.

The following comparisons are given with reference to the cost of the cast iron lamp posts purchased by the city:

	1893	1894	1895	1896	1897	1898
Each.....	\$5.70	\$5.92	\$5.95	\$5.45	\$5.02	\$4.85

Average cost for three years under contracts made by former administrations, \$5.86.

Average cost for three years under contracts made by present administration, \$5.10.

ELECTRIC STREET LIGHTING.

The contract for electric street lighting was formerly made for only 2,300 hours per year, whereas the present Administration has operated under a schedule of illumination all night and every night of 3,760 hours. Under the former schedule the cost aver-

aged \$88.67, while under the present schedule for the three years it is given as follows, particular attention being called to the reduction of \$1.56 per lamp for the year 1898, as compared with the preceding years:

	1896	1897	1898
All night and every night, 3,760 hours,	\$94 80	\$94 80	\$93 24

VAPOR STREET LIGHTING.

The cost of vapor street lighting has also been greatly lessened, the price for 1897 having been the lowest in the city's history. How these reductions have been gradually made is shown in the following table:

1894	1895	1896	1897
\$18 25	\$18 25	\$17 95	\$13 98

CARE OF GAS STREET LAMPS.

In the care of gas street lamps there has been a steady hammering down of prices, as is shown by the following schedule for the years named:

	1893	1894	1895	1896	1897	1898
On East Side of the river	\$4 36	\$4 49	\$3 41	\$4 08	\$3 90	\$3 70
On West Side of the river	4 36	4 49	4 13	4 15	3 97	3 75

Average cost of care of gas street lamps on east side of the river for three years under contracts made by former Administrations, \$4.08.

Average cost for care of gas street lamps on east side of the river for three years under contracts made by present Administration, \$3.89.

Average cost for care of gas street lamps on west side of the river for three years under contracts made by former Administrations, \$4.33.

Average cost for care of gas street lamps on west side of the river for three years under contracts made by present Administration, \$3.95.

CAST IRON WATER PIPE.

An item of great expense to the city is that of cast iron water pipe. During 1894 and 1895 low prices were obtained on a quantity of pipe purchased at second hand from a Chicago company. Prior to the year of 1893 the price was almost \$7 per ton higher than that for the present year. The average cost of the three years under this administration, however, is \$18.77 per ton for all new pipe as compared with an average of \$19.69 for the years 1893, 1894 and 1895, the cost per year being as follows:

1893	1894	1895	1896	1897	1898
\$23 10	\$18 13	\$17 85	\$19 90	\$19 70	\$16 73

MEDINA DRESSED BLOCK STONE PAVING.

A notable reduction in the cost of stone paving was made last year, the price having been cut down to 25.20 cents per square foot making the average for the last two years 26.25 cents as compared with 29.64 cents for the preceding years, the cost per year being as follows:

	1894	1895	1896	1897
Average price per square foot....	28.50 cts.	30.79 cts.	28.71 cts.	25.20 cts.

Comparisons of the amount of work done by the department during the last year are equally interesting. The administration although handicapped by a discouraging lack of funds has, nevertheless, endeavored to improve the appearance of our streets by giving special attention to street cleaning. As a result of this we are able to announce that the department during 1897 cleaned 2,107.4 miles of pavement, making the total amount cleaned for the three years covered by this administration 3,823.4 miles, as compared with 1,879.5 for the three years previous. Still better results are expected for this year under the greatly reduced prices, it being possible under the new contracts to clean the streets in the down-town district much oftener than under former contracts, and also to increase the number of cleanings for the outlying districts. This city is still parsimonious with funds for street cleaning purposes, the amount appropriated annually being

very small in comparison with that for other cities of its size and importance. It is to be hoped that a very liberal view of this matter will be taken by the incoming Council as clean streets are essential to the proper appearance of our municipality. Not only this but to a large class of our citizens who use bicycles, cleaned streets are regarded as a positive necessity, as well as the proper sprinkling of the same, provision for which has been made through the passage of a law by the present session of the General Assembly. The street division cleaned and rounded up 842.6 miles of dirt streets for the year 1897, this being fully double the amount cleaned and rounded up annually during former administrations. The amount of crosswalks laid was 45,231 feet which was an increase almost as great as that of cleaning and rounding up streets. Thirty-nine streets were paved or repaved during the year, making a gain of 8.73 miles and plans were laid for paving at least fifteen miles of streets in 1898, legislation for which is all practically completed.

An almost unprecedented amount of sewer building was done in 1897, the amount expended being \$402,454.79, and including work on 79 sewers. This expenditure was 300 per cent. greater than in 1895, plans for which were laid under the preceding administration, and 200 per cent. greater than in 1894, the last year of the former administration. The character of the sewers and quality of workmanship have been better than ever before. A large number of the sewers built are located on the West Side, the administration desiring to fulfill the pledges made to West Cleveland when that village was annexed.

The management of the Water Works Department has been unusually successful, the net profits of the division being upwards of \$365,000. Forty miles of water pipe were laid, making the total for the three years of this administration 92½ miles, as compared with 66½ miles for the three years of previous administrations. There was an addition of 232 fire hydrants; a net gain of 1,818 water connections; a net gain of 99 water meters set; a total average of 48,397,837 gallons of water pumped, showing an average increase in consumption of 2,749,496 gallons per day over the preceding year, or an increase of 4.74 per cent. The cost of fuel for pumping a given quantity of water was considerably lessened,

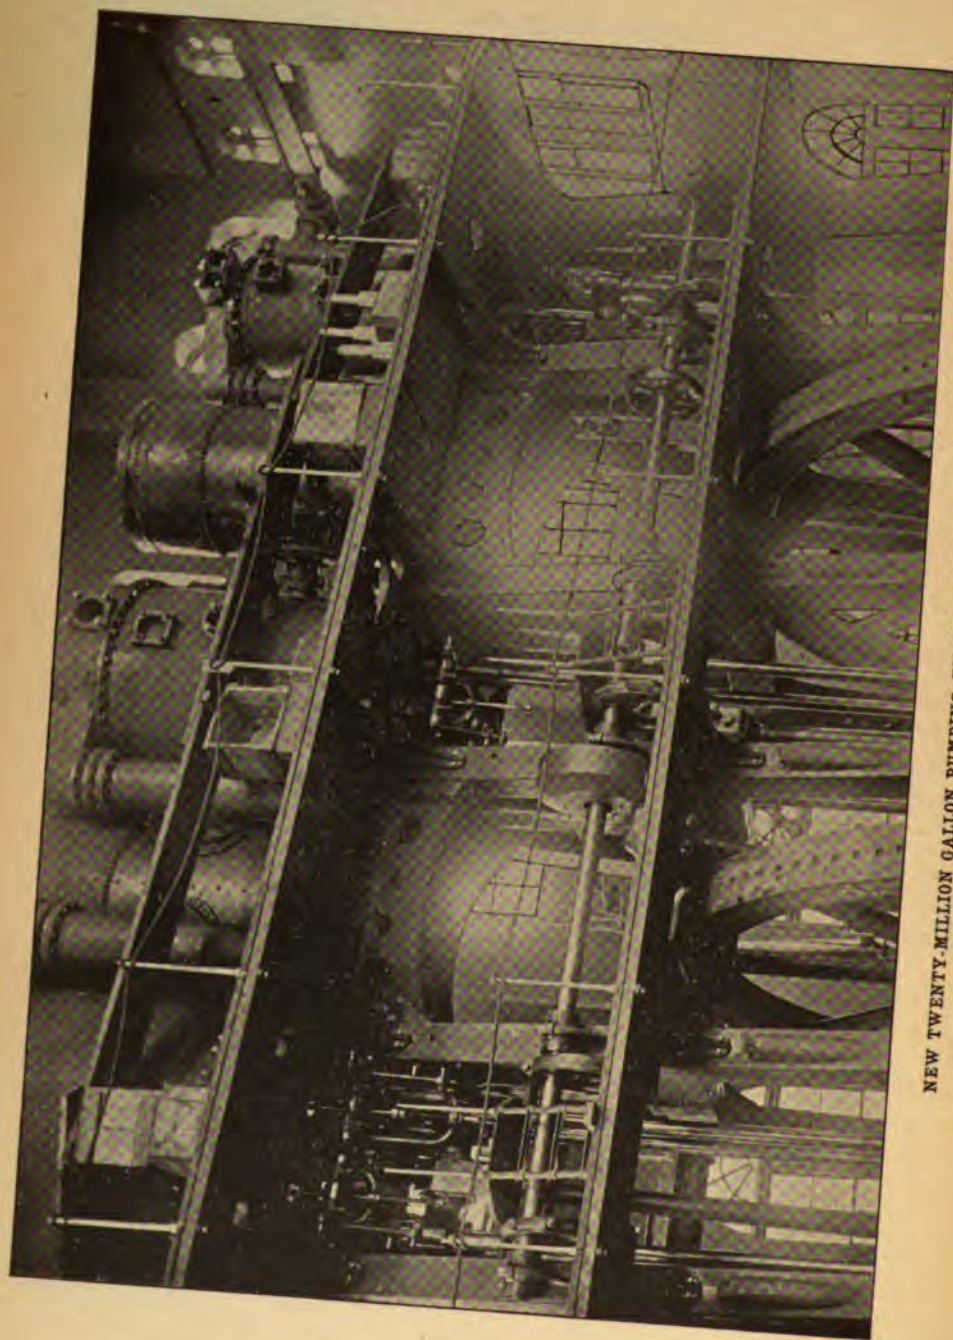

the average cost of coal being \$2.18 for pumping 1,000,000 gallons of water, as against \$2.40 in 1896, being a decrease of 11 per cent.

A new engine and boiler house at the Division street pumping station have been completed and contracts awarded for six water tube boilers which are now under construction. Five tubular boilers with stokers have been placed in the station during the year, and a new 20,000,000-gallon pumping engine is now being constructed in position.

The policy of the administration in extending electric lights wherever possible has been continued by this Department, the number of arc lights in use now being 1,000 as compared with 251 for 1895 when the present administration took hold. We are now happy to say that for the first time in the city's history substantial signs are placed on every street intersection, this being a practical and well-appreciated improvement.

DEPARTMENT OF POLICE.

The total expenditures of the Police Department during 1897 was \$397,922.55, as against \$402,161.11 for the previous year. This was the case notwithstanding an increase in the force of a Captain, two Lieutenants and 20 additional patrolmen by authority of the Council on January 5, 1897. This indicates the careful and economical management of the Department. The Department made 14,481 arrests in 1897, as compared with 13,491 in 1896, which indicates its growing efficiency and strict attention to duty. The total number of arrests made during the three years of the present Administration in bringing offenders against the law to justice has been 38,978, as compared with 29,836 for the three preceding years, or an increase of 9,142, which is about equal to the total number of arrests made in either 1893 or 1894. Rigid discipline has been maintained in the Department, and special efforts put forth by the police during the year to enforce all laws. Unusual attention has been paid to the lessening of the vice of immorality, the number of arrests on this charge having been increased nearly 100 per cent. The custom of holding an annual inspection of the force was introduced last summer

NEW TWENTY-MILLION GALLON PUMPING ENGINE—DIVISION STREET STATION.

with such satisfactory results that it has been decided to hold another inspection on May 28th, when the Fire Department will also appear with the police.

I concur in the recommendation of Director Abbott that the Police Patrol System should be extended to the third and fourth districts, and that two additional stations should be erected and equipped; and also that there should be a considerable addition to the present force of patrolmen, so that the city may compare favorably with other cities of its size, and that health and property may be better protected.

HEALTH DIVISION.

According to statistics prepared in the Health Office the death rate of our city has been reduced from 14.71 per 1,000 of population for 1896 to 14.30 per 1,000 of population for 1897. This is certainly very gratifying. The patronage of the public bath houses has shown a marked increase for 1897, it being estimated that fully 34,000 persons availed themselves of the privileges at Edgewater bath house, and 20,000 more at the Kirtland street bath house. The free public baths operated by the city should be increased and the facilities extended as rapidly as funds will allow, these resorts being both popular and beneficial to large numbers of our citizens. An effort was made during the year by this Department to abate the smoke nuisance, but the ordinance under which the city was operating was declared illegal in the Police Court, and the city is thus handicapped in proceeding with this reform.

FIRE DEPARTMENT.

The ability of the Cleveland Fire Department to cope with great conflagrations has been noticeably demonstrated on several occasions recently, much to the credit of the Department and its management. In spite of a number of large fires in the business section of the city the fire loss for 1897 was kept down to \$573,054.36 as against \$460,842.55 for 1896, and \$515,155.51 for 1895. The discipline and control of the force is excellent, and it is to be doubted whether any American city can show as efficient a Department considering the number of men employed.

In December the Director of Fire sent to the Council a communication containing an estimate of the cost of a new and improved fire alarm system, placing the total expense of such system at \$40,000. Unquestionably this improvement should be made at the earliest possible moment funds can be provided for it. Also a pipe line should be extended to Euclid avenue east of the Public Square in order that the fire boats may be used for that locality, the present pipes extending only to Ontario street. A new engine house of modern design was completed on Kinsman street during 1897 and was properly dedicated. It is the desire of the Department to erect this year a new engine house at the corner of Croton and Humboldt streets, and to replace the ill-fitted house at the corner of Abbey and Lorain streets. I would recommend that the fire limits be extended so as to increase the territory in keeping with the growth of the city.

The report of the City Electrician shows that the work of placing wires under ground goes steadily on. Prior to 1895, there were practically no poles removed and very little aerial wire. There has been removed from the streets by this administration during the last three years 500 poles and 5,832,560 feet of aerial wire, 73,618 feet of subway has been built containing 609,848 feet of ducts. The amount of cable placed under ground during the same time was 241,943 feet, containing 34,429,791 feet of wire or 6,520 miles, enough to reach almost twice the distance from New York to London. During the last year the amount of aerial wire removed was 1,087,780 feet and the amount of cable placed under ground was 117,759 feet. The number of poles removed was 101. Few aerial wires or poles are now left in the territory included in or contiguous to the business district of the city.

The report of the Building Inspector shows a healthy condition of that office. The fees collected in 1897 amounted to \$5,854.30, the expenditures \$6,322.50; while in 1896 the fees amounted to \$5,469.80, and the expenditures \$6,430.37, the excess of expenditures over fees in 1897 being only \$468.20 as compared with \$960.57 for the previous year. The number of permits issued in 1897 was 3,504 as against 3,338 in 1896. This office is now substantially on a self-supporting basis, while formerly considerable appropriations were needed each year to sustain it.

DEPARTMENT OF ACCOUNTS.

This department has maintained its excellent reputation in the careful and expeditious manner in which it has taken care of the municipal records and transacted the city's business the past year. In the disbursing division, 14,870 orders for goods for the various departments were certified and forwarded, bills for same examined and approved, and vouchers in payment to the number of 13,715, amounting to \$6,877,277.26 duly entered and disbursing warrants issued therefor; 3,286 receiving warrants were issued accounting for the receipt of \$7,203,256.54; 299 contracts certified; 1,478 resolutions and ordinances certified to the City Council; 4,552 reports from the departments to the Auditor were checked and approved; and 1,252 reports of the condition of the various funds were issued to the Council and departments.

The tax division prepared 66 estimated assessments for street pavings and made up tax lists for 404 street improvements on which the tax assessed amounted to \$619,692.54. This work occupies about 1,100 pages of duplicate, and involved the working up of over 27,000 pieces of property. One hundred and forty-three old street improvement funds were closed off the city's books, on which the surplus tax amounting to \$90,961.52 was refunded to the property owners.

The old city records from 1835 to 1891, have, during the past year, been taken from the old boxes and barrels in the attic and basement of the City Hall and have been carefully arranged, filed and indexed, in a room set apart for that purpose, called the Record Room, and are now in such condition that any paper or record can be found in a moment. Heretofore it has been a practical impossibility to obtain any information contained in these records except after long search in the dust and dirt of years' accumulation.

The old dockets and records of the Justices of the Peace have also been arranged in like manner in the same room. These records and papers are invaluable, being, as they are, the only documentary evidence of the city's disbursements and transactions for a long period of years. Provisions should be made at once for fire-proof vault accommodation for them. Scarcely a week passes but some of these records are needed to prove the

TERMINAL FACILITIES OF NEW WATER WORKS TUNNEL.
Foot of Coe Street, East Side.

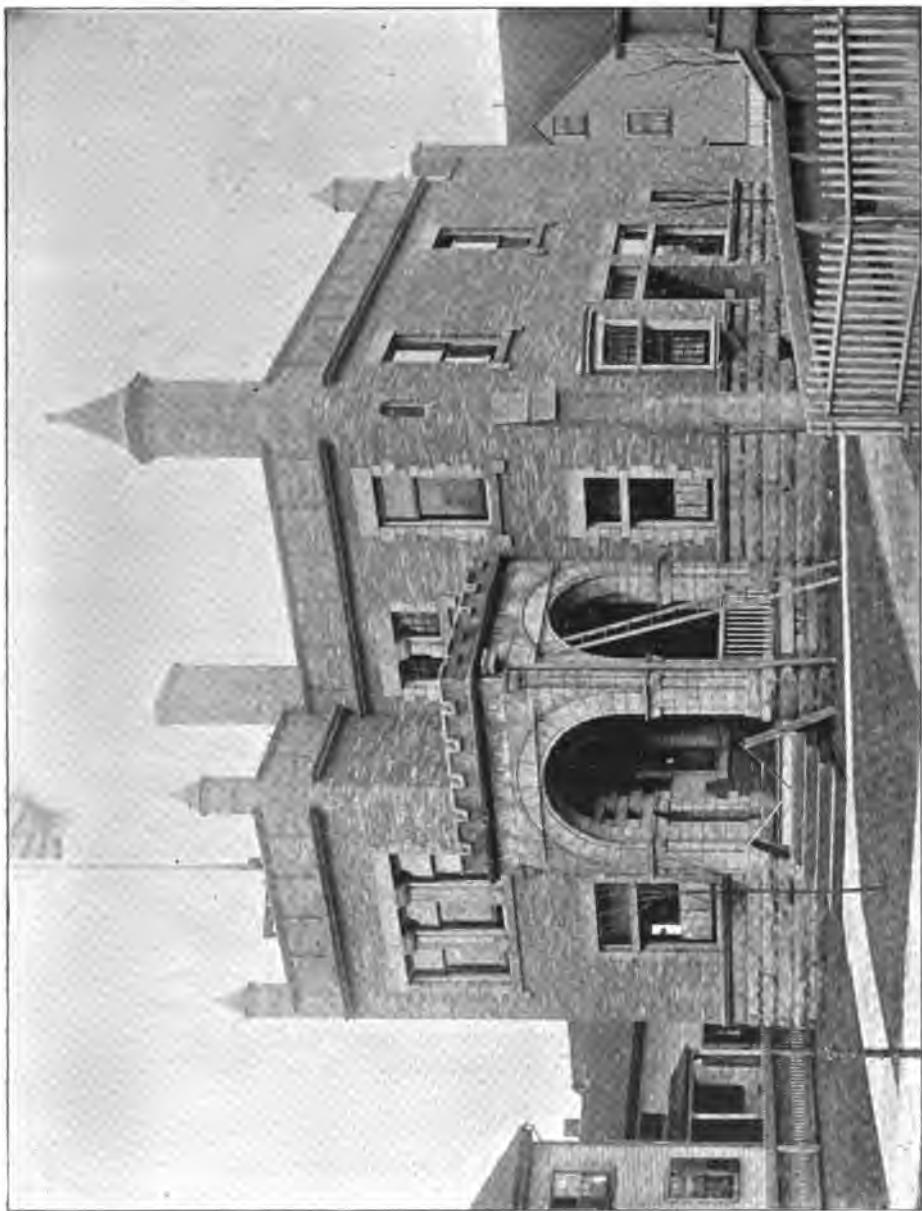

city's case in court, and a fire in the City Hall would sweep them all out of existence and prove of inestimable and irreparable loss to the city.

The books of the Auditor's office were closed for the year January 3, 1898, with all the city's bills paid in full, and a complete report of the year's transactions, consisting of 146 tables and covering three hundred pages of printed matter was ready January 21, 1898.

DEPARTMENT OF CHARITIES AND CORRECTION.

The management of the Department of Charities and Correction has been able and satisfactory. Its excellent financial standing has been sustained, there being left in the hands of the City Treasurer to the credit of the department at the close of the year \$51,605.51. This is so notwithstanding the fact that there is due the Division of Infirmary for the care of indigent insane patients nearly \$70,000.00 for the past quarter of 1896 and all of 1897, the Judge of the Probate Court having refused to sign the vouchers authorizing the payment of such claims, and also despite the fact that a special tax of \$6,190.50 was placed against the Infirmary property for the paving of Scranton avenue, and that an additional expenditure of \$5,200 was entailed for the repair of the breakage in the old brick culvert of Kingsbury Run.

The House of Correction, under the efficient Superintendent, Mr. Dorn, is still self-sustaining, notwithstanding the decreased population and consequent lessening of income, and the increased cost of food supplies. This institution while it is not intended as a profit making affair, nevertheless is enabled from its earnings to keep its buildings and fixtures in first-class repair and extend the facilities for the transaction of business. A number of improvements of a sanitary nature have been made at the institution during the past year. The roof of the main building has been placed in splendid repair and a large amount of new and improved machinery has been added. I concur in the movement placed under way by the director to provide a large dining room for the prisoners rather than to compel them to eat their meals in the sleeping rooms.

NEW FIFTH PRECINCT POLICE STATION, EAST MADISON AVENUE, NEAR WOODLAND AVENUE.
No "Extras," and the First Police Station Built for Less Than the Appropriation.

At the City Infirmary and Hospital the average daily population was 753, the largest in the history of this institution. The entire per capita cost of maintenance and attendance for the year was \$115.12 or a decrease of \$1.79 per capita over the year 1896. The building, furniture and fixtures of the institution were overhauled and placed in first-class condition, the interior of the Infirmary and Hospital being repainted throughout.

During last summer, necessary legislation was passed in the Council and contracts were let for the construction of the Children's Hospital which will be ready for occupancy by July 1st, 1898. When completed this building will accommodate 100 children and will be of great benefit to our city as well as a noble addition to our charities.

Strict economy has been exercised in the management of the Out-Door Relief Department by Superintendent Ricksecker. Rigid inspection into the condition of applicants for relief have been insisted upon, and where possible the heads of families have been required to work for their supplies. One result of this was to rid the books of a number of indolent and worthless characters who were unwilling to labor for what they received.

Through the efforts of Director Akers arrangements have been made for establishing a clearing house to which all the organizations dispensing charity will report the cases and thus prevent the duplication of relief. Over 150 societies and churches have signified their willingness to co-operate in this movement, and it is expected that the clearing house will be in operation very shortly.

In August last I sent to your Honorable Body a communication advocating the establishment of an institution for the care of incorrigible youth. There is no doubt that such an institution as was then recommended should be provided. It has been suggested that the building be erected upon the land purchased by the city for the Lorain street cemetery which has been changed. I sincerely hope that steps will be taken during this year to bring the matter to a culmination, deeming it essential to the proper management of juvenile incorrigibles in our city.

A large amount of work has been done during the last few months in beautifying the burial ground which will be known as West Park Cemetery. This property is admirably adapted for

the purpose to which it is to be applied and when once improved and opened there can be no question but that the West Side will possess one of the most beautiful and picturesque cemeteries to be found anywhere in the country. This cemetery will be formally opened during the coming summer.

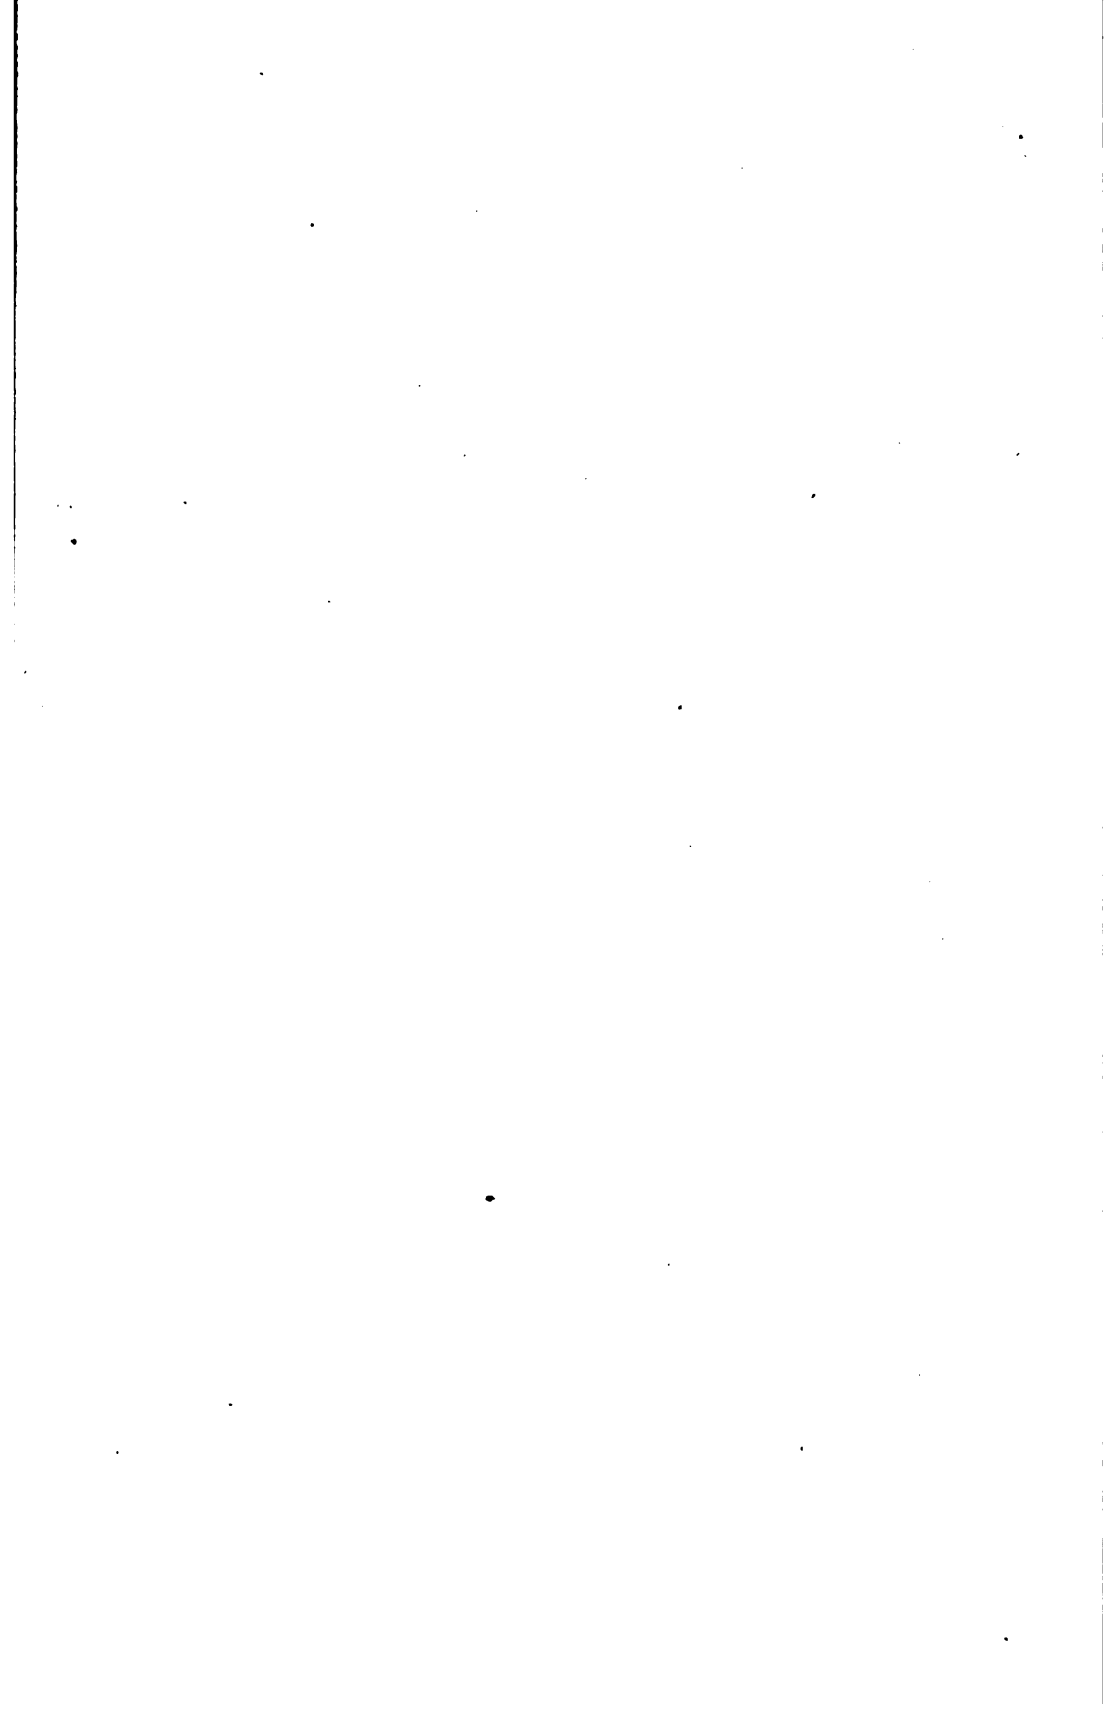

In concluding this communication I desire to say that it will be the aim of the Administration to push as rapidly and as wisely as possible the big improvements now under way for the benefit of the city, and to obtain the best results possible from each department of the public service. In this undertaking we will expect the co-operation of the Council. Let our municipal interests always be uppermost in our minds, and whether it be individual or corporate interests that come in contact with these, let the municipal rights be jealously protected, and that which belongs to the people be faithfully preserved. If your Honorable Body will plan carefully and well, great things can be accomplished for the good of the city next year. Cleveland is awakening out of the lethargy in which it has rested for a quarter of a century and is now advancing with rapid strides. Let us take up the questions which pertain to our municipal government and commercial prosperity in a thoughtful, business-like and earnest way, and by united work and co-operation push forward to still higher achievements.

Respectfully submitted,

Robert E. McKisson

Mayor.

REPORT
OF THE
CITY CLERK.

Report of the City Clerk.

January 15, 1898.

To the Council:

I submit herewith tables showing in condensed form the operations of the Legislative Department of the city for the year 1897. Under the operations of the Council the necessary ways and means have been granted the executive officers of the city for the carrying on of the tremendous improvements in our sewer systems, especially marked in the great Walworth Run interceptor, now well under way. The money provided for widening of the Cuyahoga River has resulted in valuable increase in our dock front and navigation facilities. Work is now contemplated for extensive improvements on the lake front which your honorable body will likely be called upon during the present year to consider. Improvements at Erie street have been extensive, and the recent additional appropriation of \$30,000.00 by the Council will undoubtedly complete the main dock and pier at that point. The contentions during the past year over a rational and businesslike settlement of the street railway question is still in abeyance, the matter being referred to the Chamber of Commerce, which body has practically promised to submit for your consideration an ordinance embodying provisions alike just to the corporations and the city.

The same unsatisfactory condition in regard to city licenses exists, the Executive Department not having enforced the license bill passed by the Legislature two years ago. Until this license

law is enforced, or some similar measure enacted and put in operation, unsatisfactory results may be expected. In the two years since the passage of the license bill the city would have received probably \$300,000 instead of \$60,000 had the measure been made operative by the Executive Department. It is hoped that a license bill will be enacted this winter and enforced immediately.

The following tables briefly enumerate the transactions of the Legislative Department.

Respectfully submitted,

HOWARD H. BURGESS,

City Clerk.

Respectfully submitted,

CHAS. W. CHASE,

City Treasurer.

Annual Report of the City Auditor.

CLEVELAND, O., January 26, 1898.

To the Hon. Robert E. McKisson, Mayor:

SIR:—As required by law, I herewith submit my annual report for the fiscal year ending December 31st, 1897, such report being set forth in tabulated form and arranged as shown in the following "Table of Contents:"

Your attention is especially called to the following items, viz :

a. During the year the assets of the city increased to the extent of \$2,981,340.09 (table No. 146); the liabilities increased \$1,327,909.34, making a net gain to the city of \$1,653, 430.75.

b. There is a net increase of Operating Expenses of \$82,-480.81, made up largely as follows (table No. 139):

Water Works...	\$14,584	27—	Due to increase of plant.
Park	42,685	46—	" " parks.
Police	24,954	10—	" " force.
Lighting	10,032	68—	" " lights.
Infirmary.....	15,261	89—	" large increase of inhabitants.

On the other hand, there will be noticed a marked decrease in the Operating Expenses in the Bridge, Market, Sanitary and House of Correction Departments.

c. There is an increase in the Income or earnings (table No. 140) of \$103,593.63, in spite of the fact that over \$50,000.00, due and payable from the County of Cuyahoga for care of Insane at Infirmery, has not as yet been paid.

d. The House of Correction still continues to be more than self-supporting, showing a profit over and above all expenses of \$4,813.81 (table 87). The Water Works yielded a net profit of \$365,052.92 (table 68); the Market Fund a profit of \$38,231.07, (table 79); and the Cemetery Fund a profit of \$2,591.93 (table 84). As soon as West Park Cemetery is ready to open this last item will increase largely, there being practically no city cemetery lots for sale this past year except in Woodland.

e. The City Tax Levy (table No. 142) was *cut down* from \$13.75 per \$1,000 on the duplicate in 1896 to \$13.60 per \$1,000 in 1897. This is the lowest rate of tax levy for city purposes since 1886, and the lowest rate but one since 1878.

f. Tables Nos. 137 to 146 of this report, giving comparisons for the last eighteen years of expenses, income, valuations, tax levies, receipts from various sources, assets and liabilities, should prove of considerable interest and value.

As to the work performed in the Department of Accounts, the "disbursing division" has during the year issued 13,715 disbursing warrants and 3,236 receiving warrants; 14,870 Orders for goods for the various departments have been certified and forwarded, 299 Contracts certified, 1,478 Resolutions and Ordinances certified to the City Council; 4,552 Reports from the Departments to the Auditor have been "checked up" and proven; 1,252 Reports have been issued to the City Council and Departments. The "tax division" has prepared 66 "Estimated Assessments" for street paving, and has made up tax lists for 404 street improvements, on which the tax assessed has amounted to \$619,692.54. This work occupies about 1,100 pages of Duplicate and involves the looking up of over 27,000 pieces of property. One hundred and forty-three old street improvement funds have been closed off the city's books, on which the surplus tax (amounting to \$90,961.52) was refunded to the property owners.

The old city records from 1835 to 1891 have during the past year been taken from the old boxes and barrels in the attic and basement of the City Hall, carefully arranged, filed and indexed in a room set apart for that purpose, called the "Record Room," and are all now in such condition that any paper or record can be found in a moment. Heretofore it has been a practical impossibility to obtain any information of that kind except after long search in dust and dirt of years' accumulation. The old dockets and records of the Justices of the Peace have also been arranged in like manner in the same room.

Respectfully submitted.

H. L. ROSSITER,
City Auditor.

THE STATE OF OHIO, }
COUNTY OF CUYAHOGA. } ss.

H. L. Rossiter, being first duly sworn, says that he is the duly appointed and qualified City Auditor of the City of Cleveland, and that the matters and facts set forth in the accompanying annual report are true, as he verily believes.

H. L. ROSSITER.

Sworn to before me by said H. L. Rossiter and by him subscribed in my presence this first day of February, A. D. 1898.

ALBERT F. CROSBY,
Notary Public.

PART II

ANALYSES IN DETAIL.

TABLE No. 6.
RECEIPTS IN DETAIL.
GENERAL TAX LEVY.

For condensed statement of taxes see table No. 2.)
(For comparison with former years see tables Nos. 141 and 142.)

NOTE.—This money is collected under authority of Title XII., Div. 9, Chapter 1 of the Revised Statutes of Ohio. The Treasurer of Cuyahoga County is the collector.

The value of all property within the City of Cleveland, as listed for taxation in 1896, was \$138,473,385.00, upon which the City Council, by Ordinance No. 11,921, levied a tax of \$13.25 per \$1,000 (less \$0.05 per \$1,000 deducted by County Auditor), and the Board of Park Commissioners levied a tax of \$0.50 per \$1,000 for interest on park bonds; a total of \$13.70 per \$1,000—\$138,473,385×.0137—levy of.....		\$1,897,085 37
Add delinquent taxes on real estate brought forward from the duplicate of 1895.....	\$76,450 68	
Add net collection of delinquent taxes on personal property.....	4,924 40	
Add levy on omitted property, and property whose valuation has been increased by Board of Equalization, placed upon the tax list by the County Auditor, under authority of §§1039-1040 R. S.	67,010 58	
Add penalties imposed for non-payment (§2844 R. S.).....	4,303 01	
Add one-half of county levy for county bridges collected within the city (§2824 R. S.).....	34,092 14	
		<hr/> 186,780 81
		\$2,083,866 18
Deduct tax abated by County Auditor on account of property whose valuation has been decreased by Board of Equalization (§1039 R. S.).....		\$31,415 49
Deduct tax refunded by County Auditor on account errors in duplicate (§1038 R. S.).....	4,893 85	
Deduct County Treasurer's fees for collection (77 O. L., 137, §1 and 88 O. L., 47, §§1-10).....	8,948 27

TABLE No. 7.
RECEIPTS IN DETAIL.
LIQUOR TAX.

(For condensed statement of taxes, see table No. 2.)

(For comparison with former years see table No. 145.)

NOTE.—This money is collected by the County Treasurer, under authority of an act of the General Assembly of the State of Ohio, passed May 14, 1886, entitled "An act to provide against the evils resulting from traffic in intoxicating liquors," (83 O. L. 157), as amended February 20, 1896, (92 O. L. 34), which act provides for the assessing a tax of \$350 per annum upon each place where the business of traffic in intoxicating liquors is carried on—\$105 for the use of the State of Ohio, and \$245 for the use of the City.

Balance unpaid at July, 1896 settlement, (see report of City Auditor for 1896, table No. 5).....	\$ 348,170 00
Assessment for 1896	623,500 00
Add subsequent additions on account of new businesses started.....	74,141 40
Add penalties for non-payment	6,668 09
Add net collection on real estate duplicate.....	103 74
	<hr/>
	\$1,062,583 23
Deduct tax abated on account of business discontinued.....	\$ 97,213 44
Deduct money refunded on account of business discontinued.....	32,808 34
Deduct County Treasurer's fees for collection, (83 O. L. 157, § 4) ..	4,374 88
Deduct Auditor's fees, (83 O. L. 157)	5,171 98
Deduct amount delinquent and carried to real estate duplicate...	1,752 25

CIGARETTE TAX.

(For condensed statement of taxes, see table No. 2.)
(For comparison with former years, see table No. 145.)

NOTE—This money is collected by the County Treasurer, under authority of an act entitled "Act to provide against the evils resulting from the traffic in cigarettes, cigarette wrappers, and packages containing the same, and to prevent the sale of the same, cigars and tobacco, to minors, as therein provided," passed May 18th, 1894, (91 O. L. 311) which assesses a tax of \$30.00 per annum on the wholesale traffic in cigarettes, and \$15.00 per annum on the retail traffic in same. One-half of said tax for the use of the State of Ohio, and one-half for the use of the City, to be divided equally between the "Police" Fund and the "Infirmary" Fund.

Infirmary fund— $\frac{1}{4}$ —(table No. 90)	1,181 98

TABLE No. 9.
RECEIPTS IN DETAIL.
SEWER DISTRICT TAX.

(For condensed statement of taxes see table No. 2.)

(For comparison with former years see table No. 143.)

(For statement of Sewer Districts and levy for 1897 see tables Nos. 134 and 136.)

NOTE.—This money is collected under authority of Section 2683 of the Revised Statutes and "An act to provide for the construction and repair of sewers in cities of the second grade of the first class." (80 O. L. 143.) The County Treasurer is the collector. For the purpose of building main or trunk sewers the city is divided into sewer districts. The boundaries of a district are fixed as nearly as may be by the limits of the territory drained by its main sewer. Upon all the property, *real* and *personal*, within a district, a tax (not exceeding \$3.00 on each \$1,000 of valuation) is levied for the purpose of keeping the sewers in the district clean and in good repair, and constructing such main sewers as may be necessary.

Levy of 1896, as per Ordinance No. 12,645.....		\$163,494 21
Add delinquent tax of former years.....		7,084 96
		<hr/> \$170,579 17
Deduct tax abated by County Auditor on account of changes in valuations.....	\$ 85 51	
Deduct County Treasurer's fees (7-10 of 1 mill) and County Auditor's fees (5-10 of 1 mill) for collection (77 O. L. 137 §4).....	1,931 20	
Deduct tax remaining unpaid.....	9,600 67

TABLE NO. 10.
RECEIPTS IN DETAIL.
SPECIAL ASSESSMENTS.

(For condensed statement of taxes, see table No. 2.)
(For comparison with former years, see table No. 137.)

NOTE.—This money is collected under authority of Title 12, Division 7, Chapter 4, of the Revised Statutes of Ohio, and by virtue of several ordinances passed by the city from time to time, providing for the grading, paving, draining, opening, sewerage or otherwise improving of the city's streets and public highways. The assessment is usually confined to the property immediately abutting upon the improvement, and is laid either according to the front foot of the abutting property or according to the benefits conferred by the improvement, the latter being determined by assessing boards duly designated for the purpose. Either the City or County Treasurer may collect.

Total assessments of 1896.....	\$ 617,004 74
Add delinquencies of former years.....	80,812 77
	<hr/> \$ 697,817 51
Deduct County Treasurer's fees, ($\frac{1}{2}$ of 1 mill) and County Auditor's fees ($\frac{1}{2}$ of 1 mill) for collection, (77 O. L. 137, § 4).....	\$ 7,346 90
Deduct tax remaining unpaid on August, 1897, settlement.....	88,145 02

TABLE No. 21.
RECEIPTS IN DETAIL.
DEPOSITS.

(For condensed statement of loans, see table No. 2.)

NOTE—This money is collected under a rule of the Water Works Division, requiring a deposit of \$1.00 for each foot of pipe laid at the request of property owners, in streets where the estimated revenue therefrom will not pay 8 per cent. per annum upon the cost of the pipe. When the revenue reaches an amount equal to 8 per cent. per annum the deposit is returned. During 1897 deposits were received as follows:

Depositor.	Street.	Amount.
L. A. Cobb.....	Prescott.....	\$2,418 00
L. A. Cobb.....	Matley.....	2,418 00
E. W. Andrews.....	Duluth.....	325 00
Theo. Kundts.....	Winslow, Center, Elm....	800 00
Total Deposits Received.....		\$5,961 00

DEPOSITS RETURNED.

(For condensed statement of loans paid, see table No. 2.).

NOTE.—Money is collected under a rule of the Water Works Division requiring a deposit of \$1.00 for each foot of pipe laid at the request of property owners in streets where the estimated revenue therefrom will not pay 8 per cent. per annum upon the cost of the pipe. When the revenue reaches an amount equal to 8 per cent. per annum the deposit is returned. During 1897, deposits were returned to depositors as follows:

Depositor.	Street.	Amount.
Eliza and John Stanley and Seabrook.....	Verona, Brags.....	\$ 825 00
Jos. Stanley estate.....	Renous.....	270 00
Curtiss & Ambler.....	Studley.....	717 00
Franz M. Pennndorf.....	Elsa Place.....	190 00
Sarah Francis.....	Phletus, Justus, Almond....	1,340 00
Homer Mireau.....	Scranton.....	75 00
Total Water Works deposits returned.....		\$3,417 00
On April 30, 1896, The Home Telephone Co. deposited with the City Treasurer the sum of \$5,000 as a guarantee of its fulfilling the provisions of its agreement with the city, according to Ordinance No. 9237B, § 11. On February 27, 1897, all the terms of above-mentioned agreement having been complied with, such deposit was returned to said Home Telephone Co., viz.....		5,000 00
Total deposits returned.....		\$8,417 00

TABLE No. 36.
ASSETS IN DETAIL.

CASH.

(For condensed statement of assets, see table No. 2.)

IN CITY TREASURY:

Balance in Depository No. 1 (Euclid Av. Nat. Bank) as per report of said bank for Dec. 31, 1897.....	\$723,486 76
Balance in Depository No. 2 (Dime Sav. and Bkg. Co.) as per report of said bank for Dec. 31, 1897.....	721,410 58
Balance in Depository No. 3 (State Nat'l Bank) as per report of said bank for Dec. 31, 1897.....	706,011 87
Cash deposited by City Treasurer January 3, 1898 (same being collections of Dec. 31, 1897, and a part of 1897 receipts) as per report of City Treasurer for January 3, 1897.....	16,524 91

TABLE NO. 51.

LIABILITIES IN DETAIL.

DEPOSITS.

(For condensed statement of liabilities, see table No. 2.)

A rule of the Water Works Division requires a deposit of \$1.00 for each foot of pipe laid at the request of the property owners in streets where the estimated revenue therefrom will not pay 8 per cent. per annum upon the cost of the pipe. When the revenue reaches an amount equal to 8 per cent. per annum the deposit is returned to the depositor. At the close of business on December 31st, 1897, there was on deposit under said rule \$26,450.78 as follows:

Name.	Street.	Amount.
H. P. McIntosh	Handy.....	\$ 1,082 98

NOTE.—This Fund represents the accretion of investments by the city of Cleveland in certain railroad stocks and bonds, which investments were made in order to bring such railroads into and through the limits of the city. Such investments and all business connected therewith were reorganized in 1862 by acts of the General Assembly of the State of Ohio passed March 28, 1862, and ordinances of the City Council in accordance therewith, and placed under the control of the "Sinking Fund Commission." Such laws and ordinances have been from time to time amended, and now stand as per Revised Ordinances, Chapter VII. Such funds may be used for the redemption of City of Cleveland Bonds not otherwise specially provided for. The amounts of such Funds are invested from time to time by the Sinking Fund Commissioners as shown above and in table No. 132.

NOTE.—Under the provisions of Section 2, of an ordinance passed June 13, 1892, by the City Council (Revised Ordinances, Chap. IV., subhead 3, § 2), The Cleveland Gas Light & Coke Co. and The People's Gas Light Co., in consideration of rights and privileges granted to said companies by such ordinance (franchise), said companies pay into the City Treasury, semi-annually, an amount equal to 6¼ per cent. of their gross receipts, for the period of ten years from and after the passage of such ordinance. The money thus raised, as above, is, under the provisions of ordinances passed June 27, 1892, and April 2, 1895, turned over to the Sinking Fund Commissioners, to be by them properly invested, under the title of the "New City Hall Sinking Fund." Such funds, together with all accretions thereto, to be used in the payment of bonds and interest "which may be issued for the purpose of paying the cost and expense of erecting and furnishing a City Hall for said city." (Revised Ordinances, Chap. VII., subhead 4, Div. 5 and 6, pages 549, 550.)

ART GALLERY FUND.—CLASSIFIED ANALYSIS.

Cash on hand January 1, 1897.....	\$5,000 00
RECEIPTS.	
No receipts	
DISBURSEMENTS.	
No disbursements	
Cash on hand January 1, 1898.....	\$5,000 00
ASSETS.	
Cash.....	\$5,000 00
LIABILITIES.	
Deposits	\$5,000 00

NOTE.—The above sum of \$5,000 was deposited in the City Treasury April 20, 1891, in accordance with the following resolution adopted by the Common Council May 6, 1887, viz:

"By Councilman Herriek: Whereas, the late Mary A. Warner of Painesville, Lake County, Ohio, by her last will and testament, of which she appointed Oliver K. Brooks to be the executor, left to the City of Cleveland \$5,000 towards the building of an art gallery and by the tenth clause thereof gave to said art gallery the following pictures called 'Spanish Flower Girl,' 'Vestal Virgin,' 'Peruvian School Girl,' a carving in ivory, two old views off coast of England and 'Tired of Knitting;' and whereas the said Oliver K. Brooks is anxious to deliver to the City of Cleveland the same at such times as may serve his convenience.

Resolved, That the City of Cleveland accepts said bequests for the said fine art gallery of the said \$5,000 and the said pictures and the Mayor of the City is hereby authorized to receive the same and receipt to the executor, Oliver K. Brooks, therefor.

The resolution was adopted."

Said sum is now held in trust for above purpose. The pictures alluded to in above resolution are in the custody of the Mayor.

No liabilities.....
Excess of assets.....	\$4,000 00

NOTE.—The sum of \$4,000 was set aside from the General Fund in 1892, by the City Council, to be used in the purchase of stationery and office supplies in quantities for the use of the departments of the city, thus obtaining the benefit of wholesale prices on such purchases. Such supplies are kept in the City Storeroom (Room 206 City Hall) and given out, as called for, to the departments, at cost price, on pass-books. When these pass-books are filled, vouchers are issued by the departments reimbursing the storeroom for such supplies furnished.

-----------------------	----	--------

NOTE.—When it is desired by private parties to tear up paved streets in order to repair sewer or gas pipes or lay conduits, or wires, such pavements must be relaid at the expense of the one making such opening under the direct supervision of the city. The inspectors supervising such work for the city are paid for their time from this "Inspection" Fund, and a bill rendered for same to the parties for whom such work was done. When such bills are paid the money is placed to credit of this "Inspection" Fund.

Cash on hand January 1, 1898.....	\$247 46
ASSETS.	
Cash.....	\$247 46
LIABILITIES.	
No liabilities.....
Excess of assets.....	<u>\$247 46</u>

NOTE.—Under authority of an act of the General Assembly, passed March 8, 1888, and § 108 of the Revised Ordinances of the City of Cleveland, amounts of tax refundings and un-called-for claims against the city, the address of the payee being unknown, are, after being "posted in a conspicuous place in the auditor's office for two years," paid into the "Unclaimed Money" Fund. Under the above authorities, such money in such fund may be used to advance temporarily to various funds which are "short" on account of delinquent taxes, which advances are returned to this fund when such delinquent tax is paid in. When the surplus in this fund exceeds the amount of \$2,000, such surplus is turned into the General Sinking Fund.

HOME TELEPHONE CO.—ANALYSIS.

Cash on hand January 1, 1897.....	\$5,000 00
RECEIPTS.	
No receipts.....	
DISBURSEMENTS.	
Returned deposit (see table No. 35).....	\$5,000 00
Cash on hand January 1, 1898.....	

NOTE.—On April 30, 1896, The Home Telephone Co. deposited with the City Treasurer the sum of \$5,000 as a guarantee of its fulfillment of the provisions of its agreement with the city regarding the introduction of its telephone system, as set forth in Ordinance No. 9287B, §11. This amount was held in trust as above until February 27, 1897, when, all the terms of such agreement having been complied with, such amount was returned to said Home Telephone Co.

TABLE No. 113.

GAS INSPECTION FUND.—CLASSIFIED ANALYSIS.

Cash on hand January 1, 1897.....	\$42 00
RECEIPTS.	
Received from fees for inspecting gas meters....	1 00
Total to be accounted for.....	\$43 00
DISBURSEMENTS.	
Paid transfer to Lighting Fund (Ordinance No. 18761).....	43 00
Cash on hand January 1, 1898.....	

NOTE.—Section 392 of the Revised Ordinances of the City of Cleveland provided that:

"Upon the written application of any consumer of gas within the city, made to the Director of Public Works and accompanied by an inspection fee of one dollar, the inspector of gas shall inspect and determine the correctness of any gas meter designated in such application. Upon the receipt of such consumer's application and fee the Director of Public Works shall require the gas company owning such meter to forthwith disconnect and remove the same under the supervision of the inspector of gas to the laboratory of said inspector, and, if necessary, supply such consumer with another meter for use during the time required for such inspection; and if upon such inspection the said inspector shall find such meter "fast" or that the same registers a greater volume of gas than actually passes it, the said inspection fee shall be returned to the person making the application, and in such event the gas company furnishing the gas to such meter shall pay into the City Treasury, upon demand of the Director of Public Works, the sum of fifty cents; provided that if upon such inspection the meter so inspected shall be found to register no greater volume of gas than actually passes it, the said inspection fee of one dollar shall be paid by the said Director into the City Treasury, and to the credit of a fund called the Gas Inspection Fund; provided, further, that for the expense of disconnecting and resetting each meter so as aforesaid inspected and found to register no greater volume of gas than actually passes it, such gas company shall receive and be paid from said fund the sum of fifty cents."

On December 13, 1897, the City Council passed Ordinance No. 18761, amending the above by striking out the words "a fund called the Gas Inspection Fund" and substituting therefor the words "the Lighting Fund," and by adding the following clause, viz:

SEC. 2. That the City Auditor be and he is hereby authorized to transfer the sum of \$43, which sum is the entire collection for "gas inspection" to date from the "gas inspection" fund to the Lighting Fund.

BROOKLYN FUNDS.—CLASSIFIED ANALYSIS.

Cash on hand January 1, 1897.....	\$	961 37
RECEIPTS.		
Received from special assessments.....	\$10,871 41	
Total tax.....		\$10,871 41
Received from transfer from paving fund.....	\$11,000 00	
Total transfers		11,000 00
Total receipts.....		21,871 41
Total to be accounted for.....		\$22,832 73
DISBURSEMENTS.		
Paid interest on Brooklyn Bonds.....	\$ 2,737 51	
Total fixed charges.....		\$ 2,737 51
Paid miscellaneous bills.....	\$ 242 56	
Total supplies.....		242 56
Paid Brooklyn bonds matured.....	\$ 9,716 66	
Total loans.....		9,716 66
Paid transfers to various street improvement funds (*)	\$ 7,585 33	
Paid transfer to general sinking Fund (†).....	2,550 72	
Total transfers.....		10,136 05
Total disbursements.....		22,832 73
Cash on hand December 31, 1897.....		

*By these transfers all Brooklyn street improvement funds were made city funds, and the so-called "Brooklyn Fund" wiped out.

†This transfer was a return of part of the advance made from General Sinking Fund to "Brooklyn Funds" in 1896 (see Auditor's report for 1896, table No. 122.)

NOTE.—Under the terms and conditions made at the annexation of Brooklyn village to the city of Cleveland said city of Cleveland took all assets and assumed all liabilities of said Brooklyn village. Among such liabilities were various overdrawn accounts of street improvement funds which it was impossible for the city of Cleveland to carry in that shape, on account of § 16 of the "Depositary Law" (89-O. L. 228—85-O. L. 197), providing especially against overdrawn accounts of any description. It was therefore agreed that all Brooklyn street improvement funds should be held as one city fund to be known as "Brooklyn Fund" (the total of such funds having a credit cash balance) until such time as incoming taxes or advances from the city general funds should make good such overdrafts. Such advances were made during the year 1897, and the Brooklyn street improvement funds embraced among the city of Cleveland street improvement funds (see tables Nos. 126, 127, 128, 129 and 131), thus wiping out the temporary "Brooklyn Fund."

Paid transfers to various Street Improvement Funds (*).....	3,300 69	
Total transfers	\$4,225 81	
Total disbursements.....		\$9,699 78
Cash on hand January 1, 1898.....	

* By these transfers all West Cleveland street improvement funds were made city funds, and the so-called "West Cleveland Fund" wiped out.

NOTE.—Under the terms and conditions made at the annexation of West Cleveland Village to Cleveland City, said City of Cleveland took all assets and assumed all liabilities of said Village of West Cleveland.

Among such liabilities were various overdrawn accounts of street improvement funds, which it was impossible for the City of Cleveland to carry in that shape on account of § 16 of the "Depositary Law" (89 O. L. 228, 85 O. L. 197), providing especially against overdrawn accounts of any description. It was therefore agreed that all West Cleveland street improvement funds should be held as one city fund, to be known as "West Cleveland Fund" (the total of all such funds having a credit cash balance), until such time as incoming taxes, or advances from the City General Funds should make good such overdrafts. Such advances were made during the years 1896 and 1897, and the West Cleveland street improvement funds embraced among the City of Cleveland street improvement funds (see tables No. 126, 127, 128, 129 and 130), thus wiping out the temporary "West Cleveland Fund."

TABLE NO. 116.

NIGHT SOIL FUND.—CLASSIFIED ANALYSIS.

Cash on hand January 1, 1898.....	\$310 56
ASSETS.	
Cash.....	\$310 56
LIABILITIES.	
No liabilities.....
Excess of assets.....	\$310 56

NOTE.—An ordinance passed by the City Council November 9, 1891, provides that "All moneys received by the City of Cleveland to pay for the removal of night soil, and paid into the City Treasury, shall constitute a fund to be called the Night Soil Fund, and the same shall be and are hereby appropriated to and for the purpose of paying for such removal. All payments for the removal of night soil shall be made upon the estimate of the Director of Police, and the warrant of the City Auditor, but no estimate shall be made or warrant drawn until the work has been done, and then for no greater amount than has been paid into the treasury by the person or persons for whom such night soil has been removed; and no estimate shall include any removal, the money for which has not been paid to the city." (Revised Ordinances, Chap. VII., subhead 4, Division 3, page 548.) Under the terms and conditions of the above ordinance, the Night Soil Fund is maintained.

NOTE—The Street Improvement Funds are raised by special assessments placed upon property by Ordinances of the City Council, (see table No. 10), and the money thus raised can be used only for the purpose of paying the cost and expense of making such improvements as such ordinances call for. Whatever balance may remain in any such fund after paying for such improvement is refunded to the property owners who paid such assessment, in proportion to the amount of such assessment they have paid.

TABLE No. 125.

PART VI.

THE SEWER DISTRICTS.

TABLE NO. 136.

Report on Sewer Districts in City of Cleveland, Ohio.

Authority for the creation of a system of sewerage and the establishment of sewer districts may be found in the Revised Statutes of Ohio, as follows :

SECTION 2366. When it becomes necessary in the opinion of the council of a city or village to provide a system of sewerage and drainage for such municipal corporation, or any part thereof, it shall be the duty of the board of improvements to devise and form, or cause to be formed, a plan of sewerage and drainage for the whole city or village, or such part thereof as may be designated by the council.

SEC. 2370. The plan so devised shall, in the discretion of the council, be formed with the view of the division of the corporation into as many sewer districts as may be deemed necessary for securing sufficient drainage and sewerage; each of the districts shall be designated by name and number, and consist of one or more main or principal sewers, with the necessary branches and connections, the main or principal sewers having their outlet in a river or other proper place; and the districts shall be so arranged as to be independent of each other so far as practicable.

SEC. 2379. The council shall provide for assessing the cost and expense of constructing main sewers, upon the lots and lands bounding and abutting upon the streets, lanes, alleys, highways, market spaces, public landings and commons, in or along which the same shall pass, by the feet front, or according to the valuation of the same on the tax list, or according to benefits as it shall determine.

SEC. 2384. In no case shall the assessment exceed the sum of two dollars per foot front on the property assessed; and the excess shall be paid out of the sewer fund of the corporation.

TABLE NO. 136.—Continued.

Sewer District No. 1.

Established by ordinance passed May 22, 1860, and amended as at present defined September 22, 1874.

Main Sewer.

CASE AVENUE, from Woodland avenue to Lake Erie.

No sewer bonds outstanding December 31, 1897.

Valuation, 1896, \$7,558,370.00.

Estimate for tax levy of 1897, made June 1, 1897:

Cash on hand.....	\$ 9,909 45	
1896 tax	7,500 00	
	<hr/>	\$17,409 45

DEPARTMENT

OF

PUBLIC WORKS.

CITY OF CLEVELAND, OHIO.

Department of Public Works.

GEORGE R. WARDEN, Director.

W. P. CHARD, Deputy Director.

FIRST SUB-DIVISION :

M. W. KINGSLEY, Supt. of Water Works.

SECOND SUB-DIVISION :

J. P. MURRAY, Supt. of Streets.

THIRD SUB-DIVISION :

M. E. RAWSON, Chief Engineer.

Report of the Director of Public Works.

OFFICE OF THE DEPARTMENT OF PUBLIC WORKS, }
CLEVELAND, O., January, 1898.

To the Honorable Mayor and City Council of the City of Cleveland:

REPORT
December 31, 1897.
GENTLEMEN:—I have the honor to submit the Annual Report of the Department of Public Works for the year ending

The work performed by the various Divisions of this Department has been greater than ever before, which will be seen by reference to the detailed reports from the heads of the different Divisions and tables presented herewith.

The following is a partial summary of the more important public improvements taken up and completed, or partially completed, by the Department of Public Works during the past year:

Work on the tunnel proper is well under way, 4,507 feet having been completed during the year from the shore end.

Temporary crib No. 1, to be used in the construction of the new water works tunnel, was completed and sunk on May 27th at a point about 11,600 feet from shore; and a start has been made on the tunnel in both directions from this crib. The work on temporary crib No. 2 was delayed to such an extent that the contract had to be taken from the contractor and turned over to his bondsmen. This crib is now completed and in position about 18,800 feet from the shore end. The steel crib, to be used at intake of tunnel, was commenced April 1st, and it will be completed early in the summer of 1898.

The water tunnel under the river at Main street has been completed; also the new tunnel, made necessary by the river widening project, at Superior street.

The new engine and boiler houses at the Division street pumping station have been completed. Contracts have been awarded for six water tube boilers for this station, which are now

under construction; and five new tubular boilers, equipped with stokers, have been placed in the station during the year. The new pumping engine is completed, and at the present time is being placed in position at the pumping station.

There has been a gain of 18 miles of water pipe laid during the year, making a total of 499 miles and 4,796 feet in present use. There have been placed 232 fire hydrants, making the present total 5,712. There has been a net gain of 1,818 connections to water mains during the year, making a total of 48,207 now in use. Two hundred and forty-six new water meters have been set and 147 removed during the year, making a net gain of 99 and a total of 2,046 in present use.

There have been 17,658,270,308 gallons of water pumped at the Division street pumping station, a daily average of 48,379,371 gallons, which shows an average increase in the consumption of 2,749,496 gallons per day over the water used in 1896, or an increase of 5.74%. The high service pumping station pumped 15% more water than in the previous year, pumping a daily average of 2,725,290 gallons.

The net receipts from water collections for the year 1897 were \$623,173.22, a gain of \$18,899.22.

There has been a marked saving in the cost of fuel for pumping during the year the average cost of coal being \$2.18 for pumping 1,000,000 gallons of water, as against \$2.40 for the year 1896, a decrease of 11%.

There have been issued during the year 5,107 permits for sewer and water connections.

Considerable effort has been made to prevent the flooding of the streets by sprinkling carts; but, owing to the ordinance providing no penalty for carelessness in this work, it has been necessary to obtain new regulations covering this important matter. This ordinance is now in the Council, and will undoubtedly be passed so that it will enable the Department to prevent a continuance of this nuisance.

Seven people have been arrested during the year for doing plumbing without a license; all of whom were convicted and fined. It is my intention to rigidly enforce the plumbing ordinance for the better protection of the public and those who live up to the regulations,

The Street Division cleaned and rounded up 842.6 miles of dirt streets; repaired 16,551 feet of wooden box gutters; laid and relaid 45,231 feet of crosswalks; cleaned 2,107.4 miles of pavement during the year just ended, as against 998.5 miles during the year 1896.

Thirty-nine streets have been paved and repaved during the year 1897, a gain of 8.73 miles, making a total of 136.23 miles of paved streets in the city at the present time.

Fifteen streets were graded and curbed, a total of 2½ miles in length. There have been 79 sewers under contract and constructed during the year; upon which there has been expended \$402,454.97. This work includes a start on two sections of the Walworth Run Sewer, the Intercepting Sewer along the right-of-way of the L. S. & M. S. Railway, the Lake avenue and Detroit street sewers and a large number of other important sewers.

The river widening work from Main street to a point 885 feet southerly has been completed; also on the easterly side of the river from Seneca to Mahoning street. This important work should be pushed as fast as possible. There has been 164,296 cubic yards of dredging done during the year, at a cost of \$22,346.43.

Six hundred feet has been added to the length of the pier at Erie street. Considerable ground has been made west of this point, opposite Lake View Park, during the past year, being at present about four acres.

The new bridge at Willow street was completed and opened for travel on August 17th, at a total cost of \$94,032.10.

The high level bridge on Willson avenue, at the crossing of the N. Y., C. & St. L. Railroad, is nearing its completion,

The bridge over the L. S. & M. S. and the C. & P. Railways, at Seneca street, was completed early in the year.

The bridge over the Old River Bed, at the L. S. & M. S. Railway, has been practically completed by the Railway Company during the year, the whole cost of same being borne by them.

A thorough inspection of all bridges has been made by competent experts; and the bridges found in first class condition, except for the replanking and repainting of some, a large part of which has been done during the year.

All but one or two of the options for rights of way for the Martin-Praha and Willett street bridges have been secured, insuring an early start on the actual construction of these important improvements.

Thirteen streets have been dedicated and accepted by the City. Grades have been established on 44 streets, an aggregate length of 9.9 miles.

The City has expended for the lighting of streets in 1897: For Gas lamps, \$97,818.14; for Vapor lamps, \$66,319.25; for Electric lamps, \$62,778.20. The number of Electric lamps was increased 344, an addition of 70% over the preceding year,

There has been a marked decrease in the cost of vapor lighting during the year, the cost per lamp being \$12.52, as against \$16.23, the preceding year, a saving of \$16,546.60.

Four thousand one hundred and ninety street signs have been ordered, the most of which have been placed in position upon the streets during the year, and within sixty days a suitable sign will be placed at every intersection.

Nearly seven miles of conduits have been laid by the different telephone, telegraph and electric light companies during the year, under the supervision of this Department.

The cost of pumping in the Water Works Division is so far above what it should be, providing the Division street station was equipped with a modern plant, that I believe it to be to the city's best interests to immediately proceed to the purchase of another high duty pump, so that the ordinary needs of the city may be supplied by modern and economical machinery. I am of the opinion that with the pump now being placed in position, and another one of sufficient capacity to take care of the regular average consumption, the city could save at least one-half of the fuel now used, making an annual saving in the item of fuel alone of over \$20,000.00. This, with other reductions consequent upon the introduction of a new engine, would, in my opinion, pay for the cost of the same inside of four years. I would therefore recommend that steps be taken to secure a new engine for the Division street pumping station at once. This, together with the necessary pushing forward for the buildings and machinery for the new pumping station at Coe street (plans for which are now nearly completed) and the laying of water mains prepara-

tory to connecting the city's system of water service with the new intake tunnel, and the completion of the permanent crib and tunnel, will occupy the Water Works Division with an unusual amount of work for the ensuing year.

I would further recommend that some means be devised whereby the Department may secure funds for the better care and repair of our present paved streets. The long neglect in this very important work has resulted in a very serious loss to the city. Owing to the fact that no funds are provided for the repair of these streets, the life of a pavement is shortened from five to ten years, which, in the end, is a serious matter to the taxpayer, as he actually pays the amount of this expense many times over by the renewing of the pavement much sooner than it should be. If funds cannot be provided from the ordinary city revenue, I deem this of enough importance to assess a frontage tax on the streets benefited to the amount necessary to make these repairs.

Immediate steps should be taken to relieve the conditions which prevent territory in the vicinity of Giddings Brook, Kingsbury and Morgan Runs from having proper sewerage. I have had prepared during the past year, surveys of the valleys of Kingsbury and Morgan Runs preparatory to going forward with this work. The diverting of the waters of Giddings Brook, which have caused so much damage, and the building of the Doan street sewer, seem to me to be the important projects for the Division of Sewers for the coming year; and the necessary legislation should be put through this winter to go forward with this important work.

The extension of Clark avenue is of sufficient importance that it should be given careful consideration. This is an improvement very much needed, and should be carried out as soon as some practical plan can be perfected for connecting these two important sections of our city—the South Side and the South end (known as Newburgh).

In conclusion I desire to commend to your attention the very valuable assistance rendered me by Deputy Director W. P. Chard, the heads of the different Divisions and all the present employes of the Department of Public Works, to whom very great credit is due for their conscientious carrying out of the

work entrusted to their care; for which assistance I feel deeply grateful, as, without it, it would have been impossible to have carried on the unusually large amount of work thrust upon the Department during the past year.

I also desire to express my thanks to the Honorable Mayor, the Honorable City Council and the Board of Control for the universally courteous treatment and consideration shown to me in the carrying out of the city's business.

Respectfully submitted,

GEO. R. WARDEN,

Director of Public Works.

DEPARTMENT OF PUBLIC WORKS.

First Subdivision--Water Works.

REPORT OF SUPERINTENDENT.

Forty-Second Annual Report upon the Condition of the Water Works;

BEING THE SEVENTH ANNUAL REPORT OF THE
FIRST DIVISION OF THE DEPARTMENT
OF PUBLIC WORKS.

HON. GEO. R. WARDEN,

Director of Public Works :

DEAR SIR:—I herewith submit the following report and tabulated statements, showing the receipts and disbursements as they appear on the voucher register, together with tables showing service connections made, water meters set, pipe laid, valves and hydrants set, amount of water pumped by each engine, etc.

RECEIPTS

FOR THE YEAR ENDING DECEMBER 31, 1897.

For water from Assessments.....	\$ 396,856 81
" " " Meter Measure	229,457 83
" " " Miscellaneous Sources.....	5,808 54	\$ 632,123 18
For 2,314 connections to main pipe at \$5.00 each.....	11,570 00

Ridge avenue pumping station grounds, pipe, specials, etc...	1,300 00
Total	\$8,329,800 00

LAKE CRIB—WEST SIDE TUNNELS.

An examination was made of the timber walls of this crib from the floor line down to the water line, and the walls were found to be in fairly good condition with the exception of the middle walls where they intersect at the southeast corner. These were found to be badly decayed, and eleven courses from the floor line were cut out and rebuilt with new material. The heads of timber ties in several cases were also found badly decayed on three sides of the crib. To strengthen the crib at these points 12x12 inch timbers were placed vertically on the inside of middle walls, and these timbers were connected to the outer wall by means of tie rods to counteract the tendency of these walls to spread. Five 12x12 inch timbers were placed vertically on the inner face of the outside wall and fastened with screw bolts near southeast corner of crib. In order to do all this work the stone had to be removed from the pockets of the crib and afterwards replaced. Heavy iron bands were placed around the masonry wall surrounding the well of the crib below the floor. Some bolts in the flanges of the lower ice plates are loose and should be replaced at as early a date as possible.

WEST SIDE LAKE TUNNELS.

The supply of water through these tunnels has been uninterrupted, and we have had no trouble from anchor ice or any other cause.

MAIN STREET TUNNEL.

This tunnel was completed March 31, ready for the 48-inch steel pipe, which was made by the Variety Iron Works. The final test of this pipe was made July 8 and was found satisfactory and ready for acceptance.

SUPERIOR STREET TUNNEL.

The contract for this tunnel and two shafts, made with L. H. Fahey for \$14,650, was approved by the Council August 30, 1897. This tunnel is 8 feet in diameter, and is being built from a shaft in West River street 170 feet south of Washington street to a shaft in Superior street near the river, a distance of 575 feet between centers of shafts.

Work was begun on the west shaft September 13, 1897. This shaft and 500 feet of tunnel were completed December 31, 1897. December 13, 1897, work on the east shaft was begun and about 30 feet of this shaft were sunk December 31. From present indications this shaft and tunnel will be ready for the pipe about January 20, 1898. A contract for building and placing a 48-inch steel riveted pipe in this tunnel was made with the River Machine and Boiler Co. for \$13,316, and was approved by the Council November 15, 1897.

EAST SIDE LAKE TUNNELS AND CRIBS.

Temporary crib No. 1, located about 11,600 feet from shore shaft, and which was built by The L. P. & J. A. Smith Co., was taken out and placed in position in Lake Erie and sunk on May 27, 1897. The crib was held in exact position by five lines, one from each corner, leading to anchors placed about 300 feet from the crib. The gates provided for letting the water into the crib to sink it were opened at 9 A.M., and the crib was resting on the bottom at 9:45 A.M. The depth of water at this point is about 43 feet.

After the crib had been filled with stone and the rip rap stone placed around it, elevations of the five corners were taken, and it was found that the crib was only four inches out of level.

The crib and superstructure were practically completed August 28 so that the tunnel contractor began work on this day placing girders across the well to support the iron cylinders of shaft No. 2, preparatory to sinking them.

CRIB No. 2.

The contract for temporary crib No. 2, which is practically a duplicate of crib No. 1, was made with T. H. Garland for \$33,592.48 for the crib complete and filled with stone and for furnishing the rip rap stone for \$1.97½ per ton.

Work was commenced about March 12, 1897, and on May 27 twelve courses of timber had been completed and the crib was launched. On June 18 about sixteen courses were completed, and on June 20 the crib sank inside the west breakwater. The sinking of the crib was caused by the loading of stone and not taking the proper precaution to keep the water out.

Openings had been cut in the sides of the crib in which valves were to be placed to be used in letting in the water when the crib was to be taken out and sunk in the lake. The contractor had neglected to put in these gates and had loaded it down so deep that the water came in through these openings. In the twenty-four days between the launching and sinking only four courses had been added to the crib.

Owing to the slow progress and the sinking of the same the contract was taken away from the contractor and the work given to the bondsmen to complete. The crib was raised July 25 and work was resumed the following day. In forty days thirty-nine courses were added, which was all that was built before the crib was taken out and sunk in position. On September 8 the crib was taken out and placed in position, about 7,200 feet westerly of crib No. 1, being held in place by lines and anchors in the same manner as was done with crib No. 1 when that was sunk. The gates for filling the crib with water were opened at 9:30 A.M. and by 10 A.M. the crib had sunk to the bottom and was then filled with filling stone and rip rap stone placed around it. It was then found that the crib was ten inches out of level, The crib was then leveled up and the remaining courses completed and the superstructure built, completed, and accepted on December 14, 1897.

STEEL CRIB.

The contract for this crib was approved by the Council December 21, 1896, and the construction was begun about April 1. The timber bottom and two courses of the steel work were completed and the crib was launched and towed in behind the west breakwater on June 16. According to the terms of the contract the crib should have been completed within six months, or by October 1, 1897, at the latest. Since the launching the work has been carried on very slowly, and as it was seen that the crib could not be completed this year, the contractor on November 17 brought the crib into the Pennsylvania Co.'s slip in the Old River Bed. At the end of the year seven courses of the steel sections had been assembled, ten of the twelve inlet tubes were all riveted, the outside shell was all caulked up to the top of the sixth course and the inside course was caulked up to the top of the fifth course.

This leaves three courses to be added and all the bulkhead seams to be caulked before the crib will be ready to place in position in Lake Erie. This shows that there is considerable work still to be done before the crib is ready to take out, and the work should be pushed with all possible dispatch so that they shall be able to take it out not later than May 1, 1898.

EAST SIDE TUNNEL.

On December 31, 1896, 77 feet of tunnel had been completed from shaft No. 1 westerly. On January 4, 1897, after 110 feet of tunnel had been completed, a bulkhead was built across the end of the tunnel and work was stopped in order to remove the airlock in shaft No. 1 and place one in the tunnel, and also to put an elevator in the shaft. Work was resumed on January 25, and was then pushed without interruption until 3,764 feet had been completed. A bulkhead was then built across the end and the air pressure let out. The airlock was then changed from its first position about 72 feet west of the shaft to about 3,700 feet west of the shaft. Work was again resumed on November 8 and on December 31, 1897, 4,584 feet were completed, making a gain of 4,507 feet in the tunnel built from this one heading during the year 1897.

EXTENSION OF TUNNEL FROM SHAFT No. 2.

On September 17 the contractor started sinking the cylinders at shaft No. 2. It was originally planned to sink eight cast iron cylinders and one steel cylinder, each nine feet long, and build the lower end of masonry; but as the clay was found rather soft the contractor was allowed to put in two more steel cylinders, about nine feet each, in lieu of brick masonry; and after placing these two steel cylinders and sinking the shaft 18 feet further, it was found necessary to place an air lock in this shaft in order to complete it. At the end of the year 139 feet of tunnel had been completed toward the east and bulkheaded and about 100 feet were completed toward the west, making in all about 200 feet completed from this shaft. It is the intention to build about 40 feet more to the west and then let off the air pressure and remove the airlock from the shaft and put an airlock in each heading

from the shaft and also place an elevator in the shaft. Their rate of progress has been about ten feet per day, but as soon as the airlocks and elevator are in place they will no doubt complete fifteen feet and may build eighteen feet per day in each heading.

The contractor has placed a boiler and cast iron cylinders for shaft No. 3 and a quantity of brick and sand on crib No. 2, ready for the building of the tunnel from the shaft in this crib.

DIVISION STREET PUMPING STATION.

The new engine and boiler house on the foundation erected by Messrs. Watterson & Clague was built by D. & G. Griesse for the contract price of \$21,741. The foundation and superstructure are practically complete, with the exception of a few minor details, and is now ready for the reception of the engine and boilers. The Edward P. Allis Co., who have the contract for the engine, have laid a temporary track from the Water Works switch to the engine house door and erected a derrick for the unloading of their machinery, and have several carloads of machinery here.

A contract was made with The Ohio Heating Co. for six Geary water tube boilers of 200 H.-P. each, equipped with the Brightman mechanical stoker, to be placed in this boiler house, the contract price being \$22,760 and was approved by the Council —————

A contract was also entered into with The Cleveland Steam Boiler Works for five tubular boilers to be placed in the north building of this station, in place of three marine boilers which were removed. The contract price was \$3,268, and was approved by the Council March 22, 1897. These boilers were equipped with the Brightman mechanical stoker made by The Brightman Furnace & Mechanical Stoker Co. The contract for these stokers and setting complete was \$4,762. In order to put in these boilers the foundation and smoke flue had to be changed, for which a contract was entered into with Hunkin Bros. for the sum of \$3,566, and approved by the Council March 22, 1897. All of this work has been completed.

Considerable grading has been done in the south lot of the Division street pumping station, and 80 feet of retaining wall

have been built south of the new building. This wall will be extended early in the spring, and when the new engine is up and the new water main laid for this engine the grounds will then be put in proper shape in front of both buildings. It is also proposed to lay a new sidewalk on the north side of Division street, in front of the Water Works property, and to pave a roadway in the south lot leading from Division street around to the south side of the new boiler house. For a more detailed statement of the work done at this station see appended report of Mr. Botten, the Chief Engineer of this station.

FAIRMOUNT PUMPING STATION.

The building and machinery are both in good condition. The only repair of any note has been the replacing of a cracked cover on the pump chamber of the west engine, which was replaced by a new one. The increased consumption of water in the High Service district has been such that at two different periods we have had to pump 24 hours per day. This, no doubt, will keep increasing as the additional territory on the west side of the river will increase the consumption of the water materially, and we shall, no doubt, have to put on three shifts of men so as to be able to pump the full 24 hours.

FAIRMOUNT RESERVOIR.

This reservoir is in good condition, and we have not been called upon to make any repairs during the year.

KINSMAN RESERVOIR.

A fence has been built on the north boundary line of the reservoir grounds. Early in May a slip occurred in the outer slope at the south end of the west embankment of this reservoir. During the construction of this reservoir the contractor had a roadway at this corner, used for hauling earth to the top of the embankment. This portion of the embankment was probably more compact than the other portions of the embankment, and, owing to uneven settlement, it caused a crack, which allowed storm water to work in and cause a slip, the embankment being

made wholly of clay. This was repaired by cutting offsets in the embankment and then retamping the clay back into place, and also driving long cedar posts nearly perpendicular to the slope all along the bank where it showed signs of slipping. No further repairs were found necessary.

PIPE EXTENSION.

The total amount of pipe laid during the year is 19 miles 4,502 feet
 Pipe taken out and abandoned during the
 year is..... 1 mile 4,372 feet

Leaving a net gain of..... 18 miles 130 feet

There were 148 feet of 48-inch riveted steel pipe laid in Spruce street crossing Sycamore slip, and 739 feet of 48-inch riveted steel pipe were laid in Main street tunnel, extending from West River street to East River street.

We have also laid 4,280 feet of 42-inch pipe in Alabama street, Hamilton, Main, Spruce and West River streets, closing up all gaps in the 42-inch line of pipe, which now extends from the Division street pumping station to Hamilton and Case avenues.

We also laid 2,157 feet of 36-inch pipe in Ridge avenue, from Clark avenue to Berry street.

There were also laid 242 feet of 30-inch steel pipe across the river in Dennison avenue extension, and 52 feet of 30-inch cast iron pipe were laid south from the 30 inch steel pipe to connect to pipe already laid, and 107 feet of 24-inch pipe were laid north from this steel pipe to connect with the 24-inch pipe previously laid. This makes a continuous main from the corner of Marcel-line avenue and Harvard street, through Harvard street and Dennison avenue to Ridge avenue.

On December 17, we began to turn water on to this line of pipe; and will soon be ready to supply the High Service district of the West Side.

We laid 2,017 feet of 16-inch pipe in Independence, between Fleet and Sykora streets, and 2,145 feet of 16-inch pipe were laid in Pearl street, from Dover to Dennison avenue. The accompanying tables give a detailed report of all pipes laid during the year 1897.

WATER WORKS.

331

The total mileage of pipe in the city is now :

In low service district..... 431 miles 3,987 feet

In high service district..... 68 miles 809 feet

Total..... 499 miles 4,796 feet

Pipe lowered during 1897 was. 1 mile 1,877 feet

Service connections lowered

during 1897..... 0 mile 3,132 feet

Number of feet of pipe recaulked..... 2,046 feet

Number of feet of pipe moved..... 1,211 feet

The increased number of stop gates set in 1897 was :

In low service district..... 238

In high service district..... 178

Total increase in 1897..... 416

In use prior to 1897..... 10,170

Total in use December 31, 1897..... 10,586

FIRE HYDRANTS.

The increased number of fire hydrants set in 1897 is as follows :

In low service district..... 122

In high service district..... 110

Total in 1897..... 232

Total in use previous to 1897..... 5,480

Total in use December 31, 1897..... 5,712

The accompanying tables show the size and location of all pipe laid and of all stop-gates and hydrants set during the year:

DISTRIBUTION.

The total quantity of water pumped at the Division Street Pumping Station during the past year was 17,658,470,308 gallons equal to a daily average of 48,379,371 gallons; making an average increase of 2,749,496 gallons per day or an increase in the pumpage of water over the year 1896 of 5.74 per cent.

HIGH SERVICE DISTRIBUTION.

The amount of water pumped at the High Service Pumping Station during the past year was 994,730,850 gallons equal to an average of 2,725,290 gallons or an increase of 15 per cent. over the year previous.

COLLECTIONS.

Total amount collected for water in 1897	
was.....	\$632,123 18
Less returned water rents amounting to...	8,949 96
	<hr/>
Making net receipts for water.....	\$623,173 22
Net receipts for water in 1896.....	604,274 00
	<hr/>
Increase over the year 1896.....	\$ 18,899 22

The collections for water by meter measure were \$229,-457.83.

MISCELLANEOUS.

On August 7th the 36-inch water main in St. Clair street between Bank and Water streets broke, causing considerable damage to the pavement and flooded some cellars.

On October 8th another break occurred on the same main between Wood and Bank streets also causing considerable damage to pavement.

There have been several breaks in this line in previous years, and in order to satisfy ourselves whether the cause lay in the material of the pipe or elsewhere, we had test pieces cut from the pipe that broke between Wood and Bond streets. These pieces were tested both for transverse and tensile strength.

The piece that was tested for transverse strength was made one inch thick, 2 inches wide and 26 inches long and placed on supports 24 inches apart; this bar broke under a load of 2,300 pounds with a deflection of .51 inch. The piece tested for ultimate tensile strength broke under a stress of 22,060 pounds per square inch.

These tests show that the metal in this pipe was better than required by our specifications, which call for a transverse strength of not less than 1,900 pounds, and a deflection of not less than .25 inch in a test piece of the size above described and a tensile strength of not less than 18,000 pounds per square inch.

A chemical test was also made of this metal by one of the City's Chemists and pronounced to be of a good quality.

At neither of these breaks could any flaw be found in the pipe, and they can be accounted for only on the theory that there has been a gradual settlement in the street being an after effect of the construction of a large sewer through this street, and that this settlement has caused severe strains in the main at different points until it finally broke.

On December 25th a break occurred in the 24-inch main in Willson avenue just south of Central avenue. The break was about 5 or 6 feet long and about 18 inches wide at its widest part. There was no flaw in this pipe, the shell of the pipe was of the required thickness, but the metal was found to be quite hard.

ELECTROLYSIS.

There have been twenty-four leaks in service connections during the year caused by electrolysis, two of them on Euclid avenue near Willson avenue, and twenty-two on Cedar avenue between Willson avenue and Stearns street. There was also one case found where the main water pipe in Cedar avenue had been attacked and small holes eaten into it.

There have been several connections made, at different points in the city, between the street railways' return wires and rails and our water pipes in order to obviate electrolysis of our mains and the service connections.

The great number of leaks found on one street, and the attacking of our main in one instance shows that the return currents in this section especially have not been taken care of properly. This is a very serious matter, and should at once be thoroughly investigated and means found to remedy the matter.

In consulting with the city electrician as to the best method of procedure he stated that the proper instruments should be procured and that a complete examination of the pipe system in various locations be made, in order to determine what should be done to prevent further trouble from this source and fix the responsibility therefor.

FUTURE EXTENSIONS AND RECOMMENDATIONS.

In order to be ready for the new East Side pumping station when it shall be completed, it has been decided to lay a 48-inch main in Coe street, Hamilton street and Case avenue from Lake street to Central avenue, and a 42-inch main in Case avenue from Central to Scovill avenue, a distance of about 13,000 feet. This will make a complete connection with all of the large mains of the East Side of the city.

Plans are now being made for a new pumping station at Kirtland street, including engine and boiler houses, to be equipped with engines and boilers, also aqueducts, pump wells, sewers, etc.

That portion of the west side of the city lying above 120 feet elevation will be supplied with water from the high service system early this year. This will call for a decided increase in the pumpage at the Fairmount pumping station, and it may become necessary to take steps before the end of the year for the erection of a high service pumping station on the Ridge avenue grounds purchased for this purpose some years ago.

THE ESTIMATED EXPENDITURES FOR THE YEAR 1898 ARE AS FOLLOWS:

Operating expenses, meters, etc.....	\$ 200,000 00
General repairs, mains and pumping stations....	30,000 00
Contingent expn's and miscellaneous construct'n.	15,000 00

Interest.....	\$	91,000 00
Main and distributing pipe.....		270,000 00
Balance on Superior St. tunnel, and pipe for same.		19,500 00
Steel inlet protection crib.....		140,000 00
Balance on two temporary cribs.....		10,000 00
East Side tunnel (contract price \$524,190.00)....		327,000 00
New 20,000,000 gallon pumping engine at Division street pumping station—balance.....		54,000 00
Six Geary boilers, mechanical stokers, pipe fittings, and mechanical stokers for north building Division street pumping station, and portable boiler and pump.....		40,000 00
Moving boiler house front, middle building of south boiler houses; balance due on new engine and boiler house; retaining wall, grading, curbing, paving and flagging, all at Division street pumping station.....		19,000 00
Kirtland street pumping station, engine and boiler house, including aqueduct, pump wells, etc.		100,000 00
Partial payment on two pumping engines for Kirtland street station.....		20,000 00
Refunding money advanced for pipe extension..		10,000 00
Total.....	\$	1,345,500 00
Cash on hand January 1, 1898.....	\$	140,045 66
Estimated receipts for 1898.....		670,000 00
		<u>810,045 66</u>
Unprovided for.....	\$	535,454 34

In conclusion I desire to call your attention to the same cramped quarters for office room, and would respectfully urge the necessity for providing more room for the use of this Division.

Respectfully submitted,

M. W. KINGSLEY,

Superintendent.

January 14, 1898.

REPORT OF ENGINEER
OF
PUMPING DEPARTMENT.

Report of Engineer of Pumping Department.

To the Superintendent of Cleveland Water Works :

DEAR SIR: The Engineer of the West Side Pumping Station of the Cleveland Water Works would respectfully submit the following annual report for the year 1897.

WORTHINGTON ENGINE No. 1.

This engine is still held in reserve, it has only pumped a little over fifty-one million gallons the past year, and it is in about the same condition that it was a year ago.

The water valve seats are in bad condition, which causes a large per cent. of the water to rush back every stroke instead of being forced into the mains, which is quite a loss. The material to make this change would cost about \$1,025. Otherwise this machine is in working order and ready to start at any time.

WORTHINGTON ENGINE No. 2.

This machine pumped 3,198,215,440 gallons of water the past year and with very little trouble and expense. When I wrote the last report this engine was idle on account of the four new tubular boilers not being finished; but they were completed and the engine started January 22nd. August 16th it was stopped a few hours to do some packing. October 16th it was stopped to replace a broken pin in an air pump working beam, and was stopped again on November 17th to overhaul the air pumps and do some other trifling repairs and started on the 26th. December 24th it forced a discharge valve seat out which was replaced. This caused it to stop about four hours. This machine is running every day and doing well.

WORTHINGTON ENGINE No. 3.

This engine has worked well since the repairs it received last spring. On March 17th it was stopped to replace two water valves, and on the 24th it was stopped for a general overhauling. It received brass water valve seats and stems; also new valve weights, new steam valve stems and three foot valves in the air pumps; also brass stems and guards in the air pump trunks. It also received new valves in the 30-inch check valve new diaphragm and valves in the suction pipe.

This work was completed and the engine run a few hours on May 15th, and on the 22nd it was started for continuous work. July 6th it was stopped a day to connect its steam pipe to the new main steam line. October 25th it was stopped two hours to do some packing and again Nov. 5th to replace two broken trays in the condenser with new ones and overhaul the air pumps. This was completed and the engine started on the 17th. Since that it has continued to run without interruption.

WORTHINGTON HIGH DUTY ENGINE No. 4.

This engine has been in almost constant service for four years, and it requires considerable attention now to keep it in running order. It was stopped 15 times during the past year on account of broken water valves, leaky joints and gland. About the first of the year we discovered a small crack in each of the water cylinders, which constantly increased in length. This we repaired by bolting a cast iron patch over each of them, and strengthening it with two $1\frac{3}{4}$ -inch bolts, extending from top to bottom to hold the cracks together, but we did not succeed in stopping the leak entirely. We have not had any opportunity to bore the air pump cylinders out and line them with brass, as we contemplated doing; but this must be done as soon as convenient, and some of the lagging should be removed and put up in a more substantial manner. This machine has pumped 5,662,642-480 gallons of water the past year and it is running every day.

KNOWLES ENGINE No. 1.

This machine has done well the past year. It was stopped April 23d to change the steam pipe, to conform with the new

main steam line over the boilers; and on Saturday the 24th at 7:30 p. m. it broke the piston rod of the independent condensing engine. This was replaced with a new one, and the engine started Sunday evening. Aside from this it was only stopped four or five times to do some packing, repair leaky joints and four times for broken water valves. To make this machine all right the cast iron water valve seats should be replaced with brass ones, which would cost about \$1,200 for the material to make this change. This engine is in working order and running every day.

KNOWLES ENGINE No. 2.

We never had an opportunity to lower this machine as we contemplated doing. Consequently it has only been used in emergencies. The water end of this machine received an overhauling the past year; some leaks about the steam chest were repaired and some packing done. It has only pumped a little over 746,000,000 gallons the past year; but it is ready to start at any time that it is wanted.

BOILER FEED PUMPS.

Our feed pumps have made very little trouble or expense the past year. The Cameron pump received new packing rings in the steam cylinder and some metal water valves were replaced with rubber. This was all the work required, aside from the usual amount of packing. We still hold one Cameron in reserve in the basement, and they are all in good working order.

SMOKE PREVENTERS.

We have had no trouble or expense to speak of with the Murphy or Brightman devices; but the Playfords and Americans have made considerable trouble and expense, as the design and construction of these devices are not calculated for durability.

BOILERS.

We have twenty-six tubular boilers in service at the works now. Thirteen of these are new, seven are four years and six are ten years old. The repairs on the old boilers amounted to about

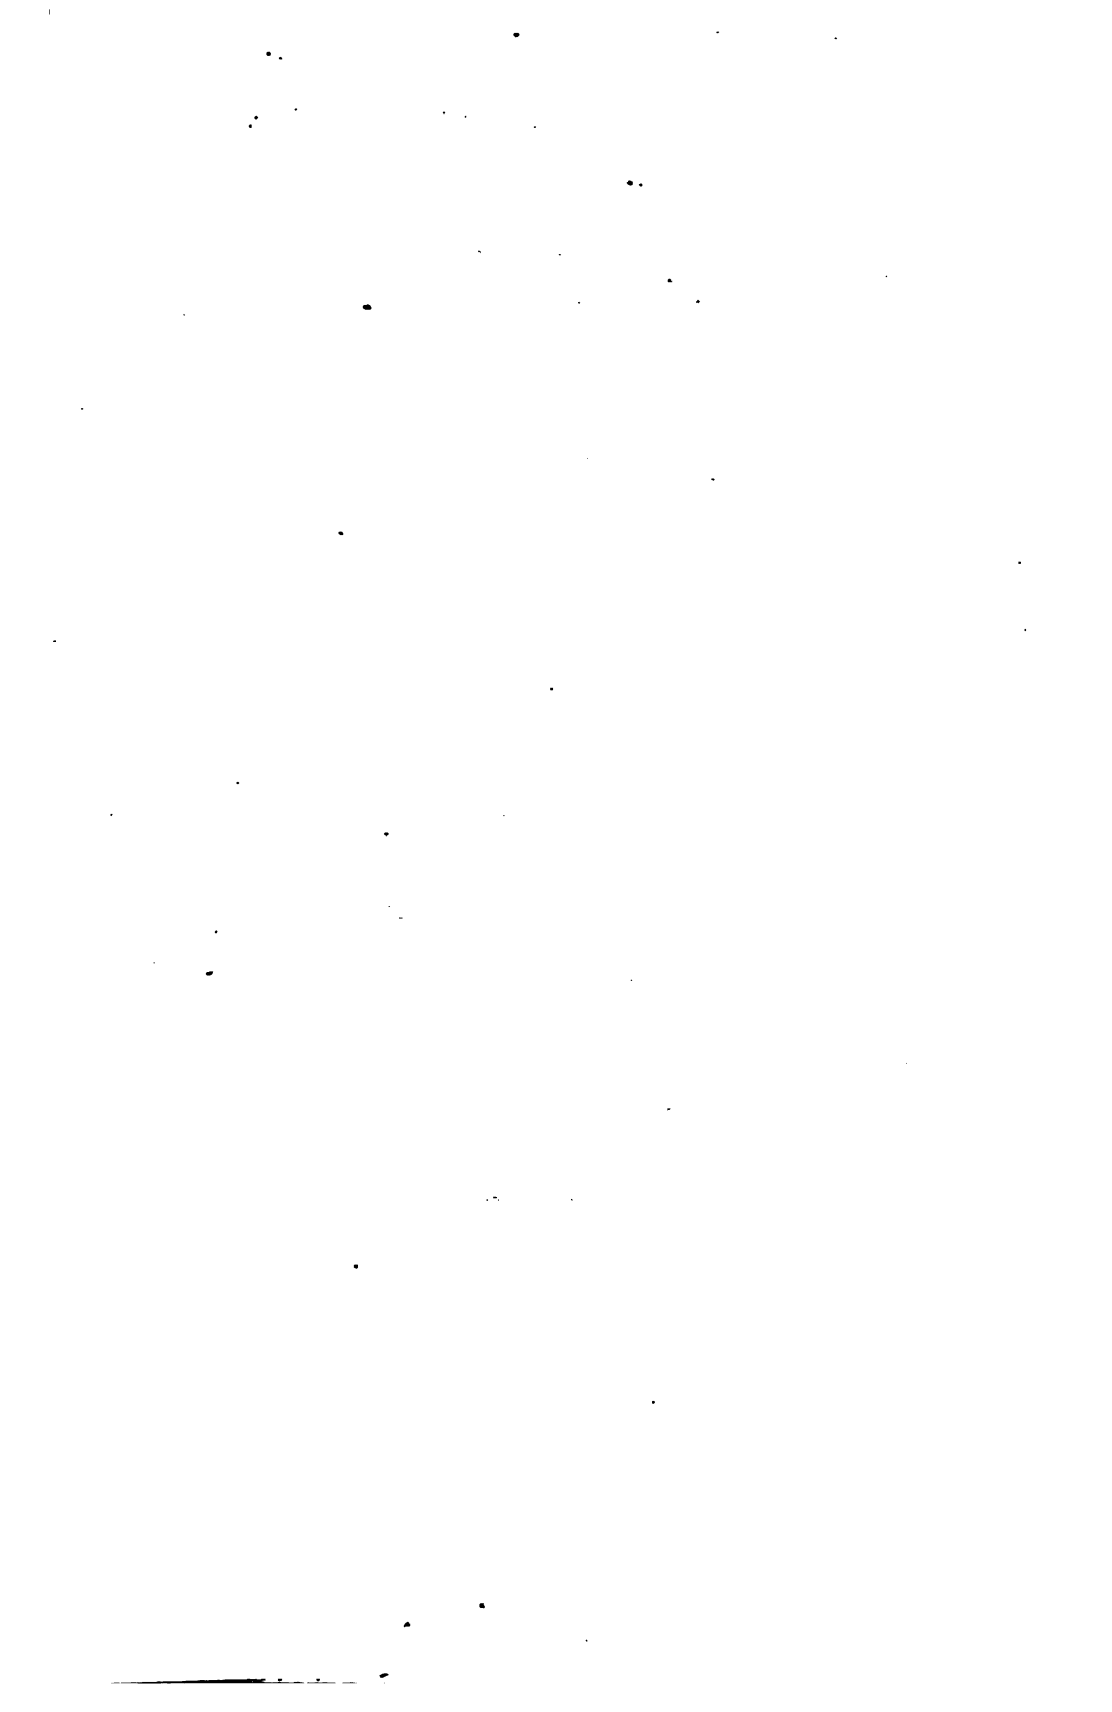

\$350.00 the past year, and I expect we will have to remove the flues, piece them out and reset them in some of the old boilers soon. The four new tubular boilers that were being erected in the north fireroom the first of the year were completed and working January 22, and on the 27th an evaporative test was made which proved satisfactory. March 24 we started to remove the remaining three marine boilers to make room for five new tubular boilers, and we had them out in the yard on the evening of April 1, 1897. The excavating was completed and the overhead flue finished May 22. This enabled us to use the three hand-fired boilers. On the 27th the five boilers were in place on blocking and tested ready for the brick work, which was completed and the boilers fired up July 13, and on October 15 an evaporative test was made, which proved satisfactory. After using these boilers about six months the arches began to fall down, which goes to show that the walls were not built in a proper manner. I would like to have permission to remove the Playford smoke preventing device, and replace it with some more practical device and also to raise the flue at the back of these boilers to the same elevation as the others. And the north wall of this fireroom should be moved back about fifteen feet to make more room for coal. We should have four new boilers on the foundations prepared for them in the south fireroom, as we needed them badly two or three times last summer when the American stokers were broken down. Our boilers are all in working order now.

MISCELLANEOUS.

In the month of February several of the Case School boys were down here making tests on the different smoke preventing devices, and March 4 they made a duty trial of the high duty engine. They had permission to do this in order to give them a little practice in this branch of their studies.

All the main steam and water pipe in connection with the boilers have been remodeled and put up in first-class shape, and brick flues at the rear of the boilers have been raised so as to discharge the gases into the stacks overhead. This affords us a good location for our water pipe.

In July the old tin roof was replaced with slate on the north building, the slate repaired on the two wings, the down spouts

repaired, and in the fall the south house received two coats of paint on the outside.

The shop engine and dynamo have made very little trouble or expense. The friction gear on the line shaft gave out in October. It was repaired and has worked all right since.

In October a new fence was built across the rear end of the north lot to give us more room to store spare castings. This is completed and the fence received one coat of paint.

Last year I spoke of the rails being too light on the sharp curve coming into the north lot. There has been nothing done with it and I see now that the fence is moved that a change could be made in the curve so as to give us one car length on the other track beyond the corner of the fireroom which would be quite an advantage.

In the fall the fence on the east and west line of the south lot was rebuilt, using some of the old material. An open ditch was made along the east, west and south lines of the south lot and paved with stone to convey the spring and surface water from the hill to the river.

A 24-inch sewer was laid along the east line of the north and south lots and across the new engine and boiler houses, to take care of the waste water from these buildings; the bank has been cut away on the south side of the new buildings, and a retaining wall built about 40 feet from the buildings, which is not quite completed.

The aqueduct is completed that connects the well in the new engine house with the shaft in the south lot, and the engine and boiler houses are completed, ready for the engine and boilers to be erected, which will undoubtedly be done this winter.

Respectfully submitted,

HENRY BOTTEN,

Engineer in Charge.

SCHEDULE

Showing the gallons of water pumped and coal consumed in pumping, percentage of coal consumed and water pumped by each engine. Contract price of coal and cost of coal for raising one million (1,000,000) gallons into reservoir.

Yours truly,

H. J. WENDORFF,

Permit Clerk.

THE FOLLOWING NUMBER OF COMPLAINTS WERE
RECEIVED DURING THE YEAR 1897 WHICH RE-
QUIRED FROM ONE TO SEVEN VISITS.

Lawn Sprinkling—written notices.....	885
Verbal Notices—about	300
Water Troughs.....	22
Stop Boxes to be lowered.....	122
Closets out of order.....	38
Wasting Water.....	104
Stop Cock Boxes leaking.....	67
Broken Hydrants.....	56
Getting water from neighbors.....	53
Giving water to neighbors.....	33
Ordered off for wasting water during 1897.....	120

We have also had seven people arrested and convicted for doing plumbing work without a license.

Have accompanied the pay wagon every trip during the past year.

Have measured all ice rinks.

Have inspected all watering troughs.

Have looked after all water used for building purposes where it has not been paid in the Building Inspector's Office. We found from 50 to 100 parties who were using water for building purposes who were not paying for the same, and have made them settle with the Water Works Department.

You will find all the above complaints on our daily report blanks which were delivered to your office every day.

Have also located street signs in nearly 4,000 places around the city.

Have inspected all sprinkling wagons in the city.

Respectfully submitted,

W. H. NEWTON,
GEO. A. BAILEY.

GEORGE R. WARDEN,

Director of Public Works.

I respectfully submit the following report of the monthly collections for water for building purposes during the year 1897 :

H. J. WENDORFF, *Permit Clerk.*

DEPARTMENT OF PUBLIC WORKS.

(STREETS.)

Report of Superintendent.

Report of the Superintendent of Streets.

CLEVELAND, O., January 18, 1898.

HON. GEO. R. WARDEN,

Director of Public Works :

DEAR SIR :—I have the honor to herewith submit to you the Annual Report of the Street Department for 1897.

In order to simplify the report it is divided into four tables.

Table No. 1 contains the "Cleaning and Rounding" of unpaved streets, paving, carpenter work, and laying crosswalks, etc. We have "Cleaned and Rounded" (col. 1, table 1) 4,448,997 lineal feet of dirt streets, equal to 842.6 miles; made and repaired 16,551 feet of wooden boxes and drains, and laid and relaid 45,231 feet of crosswalks.

Table No. 2 (Cleaning Paved Streets). We have cleaned 38,707.64 squares of 10,000 feet per square, equal to 2,107.4 miles of pavement.

Tables 3 and 4 contain sewer district repairs and merchandise for same, and while the expense on this work is very much lower than in 1896, it has been augmented by the breaks on Forest street, which cost the district \$1,408.65. We have also worked men from the Bethel Associated Charities and from the Infirmary of the Department of Charities and Correction 9,787 days and cleaned 27,696 crosswalks.

Respectfully,

JAS. P. MURRAY,

Superintendent of Streets.

Under the head of General Repairs will be found all money expended by the Department for the following purposes, viz.: Puddling, Streets, Cleaning Catch Basins, Carpenter Repairs on Gutter Boxes, Drains, Stairs, etc., Paving Gutters and Paving Repairs, and Laying and Relaying Crosswalks.

Puddling Streets.....	\$3,488 50
Cleaning Catch Basins.....	5,996 46
Carpenter Labor on Drains and Boxes.....	3,605 39
Paving Gutters and Paving Repairs.....	8,157 63
Laying and Relaying Crosswalks.....	6,266 00
General Repairs.....	\$ 27,513 98
Rounding, Cleaning and Filling.....	54,557 27
Table No. 1.....	\$ 82,071 25
Table No. 2.....	41,569 02
Merchandise per Bills Rendered.....	8,994 97
Salary of Officers.....	2,966 66
Salary of Janitor.....	571 50
Expenditures for 1897 from Appropriation.....	\$ 136,163 40
Table No. 3.....	8,186 73
Table No. 4.....	4,684 39
Total cost of work done through Department.....	\$ 149,034 52

TABLE NO. 1.

This Table shows cost of Cleaning, Rounding and Filling of Streets and General Repairs. Showing nature and Cost of all Repairs to Streets under Street Sub-division, Department of Public Works, for the year ending December 31, 1897.

DEPARTMENT OF PUBLIC WORKS.

(THIRD DIVISION.)

Report of the Chief Engineer.

Report of the Chief Engineer.

GEO. R. WARDEN,

Director of Public Works :

DEAR SIR:—I herewith submit my Annual Report of work of the Division for the year ending December 31, 1897.

The classifications, extent and cost of the various improvements will be found in the appended tables.

The total amount expended for contract work of all kinds in the year of this Department during the year is \$1,444,443.13.

In some departments the amount of work done this year exceeds that of 1896. In street paving the amount

expended in 1897 exceeds that for the previous year by 44½%;

in number of streets paved in 1896 and 1897 the relation is 39 to 39. In sewers constructed last year, while the mileage

was about one-half greater than for 1896, the cost of the work was

more than 100% greater, showing that the sizes of the sewers were greater than the average sizes for 1896, noticeably the sewer in Walworth street.

In miscellaneous work, river widening has added a large amount to this year's table, the amount expended for land being by far the largest item.

PAVING.

Thirty-nine streets were paved or repaved during the year; 39 streets were paved with Medina block stone, amounting to 1.42 miles; eleven streets were paved with Medina common stone,

the length being 1.42 miles; and twenty-two streets were paved with brick, the latter aggregating 5.83 miles, making a total of 7.25 miles.

This amount is about 44½% greater than the amount expended for similar work in 1896.

The amount of paving of all kinds in the city at the end of the year is about 136.23 miles, as shown herein.

Proposals were received for a number of asphalt pavements during the year, but no new contracts were made. It is expected that these pavements will be advertised and placed under contract early the coming year.

A decision has been rendered in the court in the Murray Hill avenue street railroad contest and it is hoped the asphalt paving for this street, now under contract and so long delayed, may be completed early next year.

Recent bids for asphalt pavements show a material dropping in prices of from 20 to 40 per cent., owing to more active competition among bidders. This is likely to bring this class of pavements into more general use in this city.

The strict classification and more rigid inspection of all material for stone pavements has brought this class of work into much better condition, and has eliminated almost entirely from our pavements an inferior quality of Medina stone found in many quarries and known as "red horse." The conditions in the guaranty of pavements for a term of years has also made the contractor more watchful upon his part, as to the quality of material furnished.

With the single exception of Ward street, between Lorain and Monroe streets, in all brick pavements laid during the year a five-inch paving brick was used, the other dimensions being about $3\frac{1}{2}$ inches thick by $8\frac{1}{2}$ inches long, made with projections upon their sides, keeping the rows apart when laid, to receive the grout or asphaltic cement filler used in the joints. In the street first named a four-inch brick was used.

All paving bricks used during the year were either of vitrified shale, or shale mixed with a proportion of fire clay. The latter, while not as hard, are somewhat less brittle and are less slippery than the former.

Brick pavements, owing to their cheapness, comparative smoothness and ease of construction, are each year coming into more general use. The past year shows the number of brick paved streets to have exceeded both the block and common stone pavements together by nearly 30%, and in cost more than 60%. The growing tendency for this class of pavements should be

encouraged within reasonable limits, but not to the exclusion of better and more expensive pavements, simply because the former are cheaper in first cost. The time of renewal of such pavements must come much sooner, when the City must pay one-half the cost of such renewal.

All pavements laid during the year have been filled with either hot asphaltic cement, Murphy Grout Filler, made at Columbus, O., or with a grout filler made of one part of Saylor's Portland Cement and one part of clean sharp sand. The two former fillers are known to be good when made as well as they can be, and the latter, it is believed will, in time also prove a good filler.

By resolution of the Council, the term of guaranty on all stone and brick pavements laid under this year's contracts, was reduced from 3 to 5 years, while that on asphalt pavements is to be reduced from 10 years as heretofore, to 5 years, the same as for all other pavements.

Concrete foundations were used on Center street, between Main and West River streets, paved with block stone, and on Lexington avenue, between Willson and East Madison avenues, paved with brick, the latter being the first of the brick pavements to receive a concrete foundation; this was occasioned by the narrow roadway and double track street railroad upon it, where the bulk of all travel is confined within narrow limits. I recommend concrete foundations for all brick pavements when laid under similar conditions, and under all pavements subject to excessive traffic; otherwise our natural foundations of sand and gravel, made hard and compact by puddling and rolling have given us excellent results and are less expensive.

All of the streets and alleys paved during the year with Medina common stone, with the single exception of Bridge street, completed from last year, were laid with old stone taken from other streets; the material, after careful selection and re-dressing, has been largely used in narrow alleys heretofore unpaved. Many of these alleys were in an unsightly and unsanitary condition before paving, and are thus made clean and useful thoroughfares. The alleys were paved with 2 or 2½ foot flagstones, 6 inches thick, laid upon each side, and the balance paved with the center slightly crowned, with the flagstone beveled

upon the upper corner next the gutter. This forms an excellent sidewalk for pedestrians, and an equally good passageway for teams, as wheels of vehicles easily mount and use the flagging in passing teams.

The prospective paving work for the coming season is more than 2.8 times greater than the amount done in 1897. Assuming that all streets will be paved where the first installment of the tax was placed upon the duplicate prior to December 20th, 1897, the number of streets, mileage and estimated cost of work to be done will be about as follows :

2 block stone pavements	.28 miles.....	\$ 25,455 00
10 common stone pavements	1.27 miles.....	52,169 00
12 Asphalt pavements	3.36 miles.....	241,368 00
33 brick pavements	10.22 miles.....	322,731 00
<hr/>		
57 streets.	15.13 miles.....	\$ 641,723 00

I recommend that the bulk of all proposed paving work be advertised and let as early in the new year as is practicable, in order that work may start at the earliest possible moment in the spring.

The amount and kinds of paving in the city at the close of 1897 are about as follows, it being remembered that only new pavements can be added each year to the mileage of pavements in use at that time :

Asphalt (Trinidad sheet).	96,390 sq. yds. =	4.95 miles
Medina stone.....	2,151,133 "	= 89.80 "
Paving brick.....	678,476 "	= 38.55 "
Wood.....	33,613 "	= 1.48 "
Macadam (cinder & stone)	15,488 "	= .73 "
Cobblestone	473 "	= .05 "
Miscellaneous.....	13,739 "	= .67 "
<hr/>		
Totals	2,989,312 "	= 136.23 "

All pavements under contract during the year were completed, except the block stone pavement on a portion of Willson avenue, from Broadway to Bower street ; the north approach to Willson avenue bridge ; the brick paving on Buckley street, from

Burton to Harbor street; the common stone paving on Scranton avenue, between Seneca and Cliff streets, and the asphalt paving on Murray Hill avenue, all of which are expected to be commenced and be completed early the coming season.

GRADING AND CURBING.

Fifteen streets were graded or graded and curbed during 1897, the length of about $2\frac{1}{2}$ miles, and costing \$9,427.25.

The work of grading and curbing for next year embraces nineteen streets about 5 miles in length, and is estimated to cost \$73,605.00.

Medina stone crosswalks with 3-inch sawed stone flagging, extending from the curb to the flagged walks along the streets, are laid in connection with all graded and curbed streets, as heretofore.

The most extensive improvement in street grades under construction during the year, a part of which is embankment and the balance steel and iron, is the overhead crossing on Willson avenue over the tracks of the N. Y., C. & St. L. Ry. The roadway will be about 25 feet above the railway tracks, with a grade descending to the north of 6 inches per 100 feet, and to the south of $2\frac{1}{2}$ feet per 100 feet to Bower street. The entire length of the improvement will be about 1,105 feet, and will cost about \$150,000.00.

SEWERS AND DRAINS.

The cost of sewer work in all its departments done during the year 1897 is nearly 100% greater than for the year 1896, and is more than 300% greater than the cost of all sewer work done in 1895.

The amount expended for the year 1897 is \$402,454.97, and embraces work on seventy-nine sewers.

The sewer in Union street, from Broadway to Woodland Hills avenue; in Willson avenue, from Kingsbury Run to Track street; in Pearl street, between Brevier and Franklin avenues and in the L. S. & M. S. Ry. right-of-way, from Alger street to Lake avenue, were completed from last year's contracts.

The sewer in Case avenue, between Woodland avenue and

Kingsbury Run; in Gordon avenue, between Breakwater and Bridge streets; in Oliver street, between Superior street and Euclid avenue, and the sections of the sewer in Walworth street were left incomplete at the close of the season. In table No. 3 the amount expended upon each is shown.

Of all the sewers to be constructed during the coming year the great Walworth street sewer overshadows all others in size, importance and cost of construction. It is by far the largest work of its kind ever undertaken by the City, and is exceeded in size and importance by only a few others in this country. This sewer will begin at the head of Walworth Run valley, at the intersection of Clark and Gordon avenues, and extend easterly in Walworth street, and in a special right-of-way in said valley, a distance of about 13,600 feet, to the Cuyahoga River. The sewer, when complete, will have an interior diameter of 16 feet 6 inches at its lower end and 8 feet at its upper end. It will be circular in form upon its interior surface, with a vitrified shale brick lining throughout. The exterior surface of the arch and haunch walls consists of segments of circles, with radii varying according to sizes of sewer. The exterior of the bottom will consist of a horizontal plane, broadened out to meet the varying conditions of the foundation. The exterior side walls below the haunches will be straight, inclining slightly inward.

The entire lower portion of the sewer, except the inner ring, as stated, will be of cement concrete, resting upon a plank grillage when necessary. The arch and haunch walls will be of brick masonry.

The sewer is designed to take storm water and sewage combined. The great length of the valley, and its extreme depth below all adjacent territory makes it the storm center of a vast area extending beyond the limits of the valley proper. The steep gradients of all street gutters and sewers connecting with it from the adjacent lands, when fully improved and built upon, will precipitate the water from excessive rainfalls into the sewer with such rapidity that floods in this valley would surely follow if the sewer were not made correspondingly large to receive it; not as this territory now exists, but as it will be when fully built up. I believe this necessity has been fully met, with a wise margin for safety in the sizes and grades adopted.

The sewer is estimated to cost about \$730,000.

To insure its speedy contemplation, the sewer work has been divided into four sections or working portions. Section No. 1 comprises the upper portion of the sewer, from Gordon avenue to the angle in Walworth street 646 feet easterly from Junction street, and is approximately 4,479 feet in length; section No. 2 begins at said angle and extends to a point 100 feet west of the westerly line of Mill street, and is about 4,353 feet long; section No. 3 begins at said last named point and extends to a point about 823 feet east of Willey street, a distance of about 3,011 feet; said last named point is in the special right-of-way secured for said sewer, which, after deflecting to the left from Walworth street, follows more nearly the trend of the stream to its crossing of Scranton avenue; section No. 4 extends from said point 823 feet west of Willey street, in and along special rights-of-way obtained for said sewer to the Cuyahoga River; the length of this last section will be about 1,770 feet.

The sewer at its outlet into the river will be of novel and somewhat difficult construction, owing to its having to pass under the tracks of the N. Y., P. & O. R. R. which run nearly parallel with, and from 100 to 140 feet from the river at this point, and consist of an upper and lower section of nearly parallel tracks, crossing the sewer at nearly right angles.

The upper section of tracks is of sufficient height to give nearly 20 feet fill over the crown of the sewer in its normal condition. From this point the form of sewer must be sufficiently flattened in a distance of about 40 feet to pass under the lower section of tracks, the supporting girders of which will not be more than 5 feet above the bottom of the sewer at this point.

Under conditions which here exist, and which are susceptible of little or no change, this sewer, which at maximum flow will carry an enormous volume of flood water, must within this short distance be depressed from a 16½ foot circle to a flattened section of less than 5 feet in height. To meet these conditions this flattened section must be broadened to more than three times the normal diameter of the sewer, or about 50 feet, for maximum flood. For the minimum or dry weather flow a separate channel will be provided either in the center or on one side of the broadened section. The sudden transition of a vast volume of water

at flood tide from a circular form to a flattened section of such unusual proportions, without shock or danger to the sewer or to passing trains over the same, is a problem seldom met with in sewer construction in this or any other city.

Another point on Section No. 4 where special construction is required is where the sewer passes under the Abbey street portion of the Central Viaduct, just west of Scranton avenue. The sewer at this point will displace one of the masonry pedestals supporting a leg of one of the spans of the Viaduct, 60 feet above.

This can be carried by greatly broadening and deepening the foundations of the sewer upon each side directly under the support, and then reinforcing the side walls and arch of the sewer sufficiently to safely carry the weight directly upon the crown of the sewer. Another plan suggested is to build two new and independent masonry pedestals, one upon each side of the sewer, and carry the iron support of the bridge upon a heavy plate girder spanning the sewer and resting upon the pedestals upon either side.

The former plan would have the better appearance and would not disfigure the Viaduct structure. With the latter plan there would be less liability of accident to the bridge in case of a break in the sewer at this point. The cost of the two plans will not greatly differ, and either will be efficient.

The construction of the sewer necessitates the raising of the grade of Scranton avenue some six or more feet at this crossing. This will give a much better grade to the street, and is desired by the abutting owners, who will waive any claim for damages, providing the cost of filling be charged to sewer construction.

The cost of paving the street, as now contemplated, to the proposed new grade would be no greater than to the present grade, after the filling is done. The change should commence on the south line of Cliff street and extend to present surface about on the south line of the Central Viaduct.

I recommend that this change be made and that the cost of filling be charged to Walworth street sewer, as such change was not made a part of the preliminary expense of paving the street, and cannot well be added now.

Work was commenced upon the lower end of Section No. 1 by Messrs. Wilson & Strack, of Cincinnati, early in the season, and later upon the portion above Swiss street. Good work was done, and about 1,630 feet of sewer was put in.

Work was commenced late in the season by Messrs. Bramley & Gribben on Section No. 2, at its lower end near Mill street, and about 430 feet of sewer completed. The sewer is 11½ feet in diameter at this point.

Work was also commenced by them, and the concrete foundation put in on the large overflow chamber about 800 or 900 feet west of Mill street, where the sanitary flow from this sewer is to be taken up and carried by gravity across the city to and through Perry and North Perry streets to the eastern interceptor in Lake street.

Messrs. Bramley & Gribben are also the contractors for Section No. 3 of this sewer, but, owing to the lateness of the season when the contract was let, no work has been done.

Owing to the magnitude of this sewer and the great volume of water that it will at times carry, the specifications in all contracts on this work are more exact, and call for better and different material and workmanship than has ever been required on sewer work in this city before, and with very gratifying results.

A testing laboratory was opened in one of the rooms connected with my office, for testing all material used in this work. Careful tests have been made of all sand and cement used for fineness; of cement for set and tensile strength, when made into briquettes, and of all bricks for absorption.

This new requirement in specifications, and its strict enforcement, occasioned some friction at first, but matters soon adjusted themselves, and better and more uniform material and workmanship were secured thereby, and soon all came to see that to definitely measure the amount of material was, after all, more satisfactory than to have inspectors and contractors guess at it, and differ as they always will.

The intercepting sewer along the L. S. & M. S. Ry. right-of-way, commenced last year, has been completed this season, from the point where work had stopped, to Lake avenue, a distance of about 3,037 feet, decreasing from 7¼ feet in diameter to 6 feet at the last mentioned avenue. The cost was about \$30,000.

This sewer should be continued the coming season from its easterly end, near Alger street, along the L. S. & M. S. Ry. right-of-way to and connect with the sewer in Waverly avenue, that citizens along the line of the sewers built this season, and connecting with this sewer, may have the benefit of sewer connections for their property, which cannot be done until the Waverly avenue sewer is reached.

The sewer in Lake avenue, from the L. S. & M. S. Ry. right-of-way to Detroit street, with its storm-overflow chamber and outlet under the L. S. & M. S. tracks, and also its sanitary connection with the intercepting sewer to the east, have all been completed this year.

The storm overflow chamber and its connections form a complicated and important piece of work, difficult of construction, especially the tunnel work under the L. S. & M. S. Ry. where water and quicksand were encountered, which occasioned the constant settling of the tracks during construction, but was completed without accident or the stopping of trains. This overflow sewer, which is designed to receive the storm overflow of all sewers centering at this point, should, if possible, be put under contract the coming winter and carried to the lake through Edgewater Park with all reasonable dispatch, the proper grant having been secured from the Board of Park Commissioners.

This sewer is to be built in tunnel and will be 9 feet 4 inches in diameter and about 1,000 feet long, to the bank of the lake, and can be easily prosecuted during the winter months. Owing to the material likely to be encountered, compressed air will doubtless have to be used, and should be specified in receiving bids.

The outlet is expected to be carried out into the lake, but the distance or mode of construction has not been decided upon.

Of the Detroit street sewers belonging to this system, the sewers from Lake avenue to Gordon avenue and that from Scoville lane to Lowell street, with its outlet through the former street into the Lake avenue sewer, have all been completed this year.

The sewers in Detroit street, from Lake avenue to Scoville lane, and from Landon street easterly to Elliott street, with an

outlet through the latter street to the sewer in Lake avenue, are expected to be completed early the coming season, as the former and the sewer in Elliott street are under contract.

The sewer in Desmond street, just south of and parallel with the L. S. & M. S. Ry., from Lake avenue westerly to and along the Boulevard to Detroit street, should be built next season, as this will serve as the outlet for the sewers in this portion of Detroit street, Wellington and West Madison avenues, and of streets in their vicinity greatly needing sewerage facilities.

Land has been secured for the eastern terminal of the Intercepting sewer, and work should begin at this end as soon as possible.

Such legislation should be secured the coming winter as is necessary to enable us to secure, either by condemnation or otherwise, the right to construct the sewer through the villages of Glenville and Collinwood, through whose territory it must pass to reach the City.

No further progress has been made toward the construction of the proposed Doan street sewer, for the like reason that one-half its length, and that the lower half, must pass through Glenville to reach the interceptor. This sewer, if built through the City's portion only, would have no outlet and could not be used. Similar legislation should also be secured for this sewer.

Surveys and maps have been made in the valleys of Kingsbury and Morgan Runs during the year looking to the building of intercepting sewers in these valleys, as must sooner or later be done. The steps here required will be similar to the steps taken to redeem the valley of Walworth Run. No definite action has yet been taken in regard to either of the two valleys.

Legislation should also be secured the coming winter authorizing the construction of a conduit for deflecting the waters of Giddings Brook east of Woodland Hills avenue through Baldwin street into Doan Brook.

The Board of Park Commissioners are favorable to this project, and the inhabitants along and in the vicinity of Giddings Brook, from Woodland Hills avenue to the lake, are demanding some relief, as this creek is little more than a dry bed much of the year, but is subject to sudden floods.

The expense would be somewhere from \$40,000 to \$50,000, and should in part be borne by those who would receive most benefit by getting rid of the nuisance.

The sewers in Forest street, from Kingsbury Run to Croton street, and the sewer in Columbus street, from West River street to Lorain street, have been replaced during the year by larger and more substantial sewers. Both of these sewers were upon steep gradients and the old sewers were so nearly worn out as to be a constant source of expense and anxiety. To renew the former cost \$13,840.00 and the latter about \$7,000.00.

The prospective work for 1898, as shown in Table No. 7 of this report, embraces sewers on 112 streets, aggregating in length more than 30 miles, and are estimated to cost \$2,995,112.00.

The work of constructing the 79 sewers under contract during the year, and preparing estimates, plans, resolutions and ordinances, etc., for the 112 sewers referred to above for 1898, has made the Division of Sewers and Drains the largest and most important in this Department.

RIVER PURIFICATION.

A plan for river purification was recommended to the City Council in January, 1896, by the Commission of Expert Engineers. This plan was approved by the Council on February 3, 1896, and if to be done should receive such consideration the coming year as will place the project under construction at least during the year following.

The Commission recommended the construction of a flushing tunnel 18 feet in diameter, extending from the lake at Edgewater Park, near the foot of Barrett street, thence under the city in nearly a direct line to the Cuyahoga River upon the Infirmary farm, near the foot of Valentine street produced.

By the use of a large propeller wheel pump, to be located on the lake end, lake water can be pumped through the tunnel in quantity sufficient to displace the entire volume of water in the Cuyahoga River from this point to the lake, a distance of about $6\frac{1}{2}$ miles every 24 hours, without injury to abutting property or disturbance to navigation.

A similar plan is in successful operation at Milwaukee and has been for some years, where even worse conditions as to river

pollution prevailed than exist here, owing to the many large breweries and large tanneries located along the river. So satisfactory has the Milwaukee project been that similar treatment has been ordered for the other of its two rivers, also a greatly polluted stream.

The benefits derived from this method of river purification result from the flushing of all waste matter out of the river into the cooler waters of the lake before decomposition and putrefaction take place. Such decomposition is not there likely to take place in such degree as to contaminate our water supply as at present, where the river water is discharged into the lake in an already vitiated condition.

This tunnel, with its pumping plant, would be likely to consume two or more years in construction. By that time our new water supply would be in use, before river flushing could be made available.

The flushing tunnel and pumping plant have been estimated to cost about \$1,000,000.

RIVER AND HARBOR WORK.

Important progress has been made in the steps preliminary to widening the river and opening a channel into the lake at the upper end of the Old River Bed, as already referred to in this report. An opening has been made through the railroad embankment for a bridge over the channel to the lake and a portion of the heavy stone abutment has been completed. The bridge will be 100 feet long, spanning a 60-foot channel for boats and a 40-foot passageway for public travel or car tracks, as may hereafter be determined.

The mouth of the harbor or entrance to the Cuyahoga River is to be very materially improved, it is hoped, the coming season by the entire rebuilding of the West pier by the General Government, about 180 feet west of the present location of the pier, providing the city secures and donates the land for such widening. The negotiation leading to the purchase of most of this property is now already complete, and a wider harbor, ample for the entrance for the largest lake vessels, seems assured.

The widening of the River, as now proposed, upon its westerly side, extends from the Old River Bed to a point 40 feet south of the south line of Elm street.

From Main street, about 885 feet southerly, to a point about 300 feet north of the Superior Street Viaduct, the river has been widened from 35 feet at Main street to about 60 feet near the Viaduct, by constructing an entire new dock 18 feet in width and dredging the channel in front of the same to 19 feet of water, at a cost of \$26,867.87. The cost of additional land not already owned by the City for widening the river between the above points was \$272,697.91.

The river, upon its easterly side, between Seneca and Mahoning streets, was dredged, new docks constructed and widened about 30 feet in its widest part, at a cost of \$11,600.00, during the past year.

During the coming year, if the necessary funds can be secured, the work should be completed from the end of the new dock, about 300 feet north of the Viaduct, to the easterly end of the proposed change, 40 feet south of Elm street. This work will cost about \$30,000.00, exclusive of the reinforcing of the abutment of the Viaduct, which latter is estimated to cost as much more. A portion of the land for such widening has already been secured and negotiations are now pending for the balance.

There are several sections of the river above this point which should receive the attention of the authorities. One is the point near the intersection of Columbus and Leonard streets, where the very narrow channel of the river is obstructed by the center pier of the C., C., C. & St. L. Ry. freight bridge, where the channel is divided into two extremely narrow openings, one of 54½ feet and one of 55 feet. The bridge is built of wood and is about to be replaced by a new structure. When this is done the center pier should be placed wholly upon one side of the channel, as the city contemplates at Center street and has done at Willow street. No permit should be given the railway company to rebuild this bridge unless the center pier is to be moved to one side.

That part of the river between Middle and Lower Seneca street bridges, and known as "Collision Bend," is one of the most difficult parts of the channel to navigate, owing to the narrowness of the channel and close proximity of the two bridges.

A large strip of land, not less than 50 feet wide in the widest part, should be taken from the right or east bank of the river between Middle Seneca street bridge and the Valley tracks, and a small strip from the apex of the curve on the left bank, and added to the channel width around the curve, for the better handling of large vessels. This should be supplemented by the rebuilding of the bridge at this point, known as Middle Seneca street bridge, and placing the center pier out of the channel and wholly upon one side of the river, as hereinafter referred to in this report.

A small triangle of land should be secured from the northerly side of the Cincinnati slip, near the end of Ohio street, to increase the width of the slip and better facilitate the winding of vessels at this point. This land, with the necessary docks and dredging, has been estimated to cost about \$10,000.00.

Additional land should be secured for extending the 60-foot channel now being constructed at the head of the old riverbed by the L. S. & M. S. Ry. Co., from the north line of said company's right of way to the lake, presumably about 500 feet. The cost of this work with the necessary land may be roughly stated at \$50,000.00.

At the request of the Council an estimate was made of the cost of a preliminary pier, to be afterwards enlarged and extended, at the foot of Willson avenue, the cost of which it was reported would be about \$36,300.00.

Sooner or later the question of straightening the river at Jefferson street must be taken up, as a new north abutment for the bridge at this point is at once a necessity, and the bridge itself must soon be renewed. The channel of the river at the bridge is very confined and crooked, and is subject to the worst ice gorges in the entire river. A new channel should be placed about 500 or 600 feet to the west. This work, including land, docking and dredging, exclusive of a new bridge, would cost about \$110,000.

In the rebuilding of all river bridges, wherever practicable, and as soon as possible, all center and other piers should be removed from the center of the channel, whether the bridges are used for highways or railroad purposes.

The low stage of water in the river and lake, noted in my last Annual Report has changed during the last year from 1.3 and 1.6 below to only about .8 feet below government zero, which is the base of reference on all river and harbor dredging, both by the United States Government and the City; this base is 2.34 feet below the City base of levels.

The channel has been dredged to a uniform depth of 19 feet below zero, with a width of 130 to 140 feet wherever practicable, except in the river between the N. Y., P. & O. bridge near Broadway and the weighlock, where the channel was dredged to somewhat less depth. The river dredging contract has been renewed for another five years, and extends to the easterly limits of the City. The price per cubic yard is 12 cents, including logging, but logging done in sections of the river not heretofore dredged is paid for at the rate of \$8 per hour of actual work. The price per cubic yard includes removal to the dumping ground in the lake east of Case avenue. The amount of dredging done during the year 1897 was 164,296 cubic yards, and cost \$22,346.43; this amount is nearly double the amount of the preceding year.

The Erie street extension work into the lake has made substantial progress during the year. The 20 foot pile and timber pier has been extended into the lake along the easterly line of Erie street about 600 feet beyond the point where the work was left off last year, at a cost of \$17,531.96, and now ends about 1,144 feet from shore. From near this point a pier should be deflected to the left at nearly a right angle, and continued westerly about 24 feet wide towards Seneca street, about 600 feet from and parallel with the United States government dock line, if the same is extended east of Seneca street on the same line as now fixed west of that point, as seems most desirable for the City, giving more room for a public landing, or pleasure ground, as the same shall hereafter be used.

The Secretary of War has, however, fixed the harbor-line, not as an extension of the line west of Seneca street, where it is about 1,800 feet from the shore, but deflecting from that point towards land, until at Erie street it is near the end of this year's work, instead of 600 feet farther into the lake, as it should be. It is hoped that the Government will change the present order

and continue on the straight line up to and past Erie street, at least. This harbor-line is 1,700 feet south of the breakwater, wherever that may be located.

The westerly or 24-foot pier, as proposed by the City, could be used as the southerly end of slips, if constructed out 600 feet, to the northerly boundary of the proposed extension of Lake View Park, as this reclaimed portion of the lake may hereafter be used.

During the year the pile protection heretofore begun has been completed from Erie street westerly to a point 731 feet west of the west line of Erie street, and about 235 feet from and parallel with the shore, and is designed to protect the land being made at this point from cellar excavations, etc., from being washed away and carried out into the harbor. This protection is a requirement of the government authorities. About \$11,685.00 has been expended on this work, of which about \$4,200.00 has been this season. Additional funds have been asked for to extend the pier westerly, as above suggested.

It is estimated that not less than 175,000 cubic yards of earth have been deposited in the lake at the foot of Erie street since it was opened as a public dumping ground three years ago, thus adding not less than 4 acres of ground to Lake View Park without cost to the city, except for labor in spreading the earth as received.

VIADUCTS AND BRIDGES.

Willow street swing bridge, referred to in my report of 1896 as being in process of construction, was completed and opened to travel about August 17th of this year.

The amount reported as expended in 1896 on this work was \$31,622.49. The amount expended to complete the same, as shown in Table No. 4 of this report, is \$52,309.61, including superstructure, land damages, etc., which, with \$10,100.00 previously paid for land, makes a total to date of \$94,032.10. To this amount should be added the sum to be paid to the Cleveland & Pittsburgh Railroad Company for a triangular piece of land not yet acquired at the extreme easterly end of the bridge when opened. The price asked for this land is \$3,000.00, which, if added to the above amount, would increase the cost to \$97,032.10.

This land should be acquired at once, as the bridge is only enabled to swing in one direction at present, which is, at times, dangerous both to the bridge and to navigation.

This bridge is operated by electricity and is giving excellent satisfaction. The height of the bridge is sufficient to allow the majority of all river tugs to pass under it without swinging, by lowering their smoke-stacks. This rule should be enforced, as the present ordinances of the city fully cover such cases, and its observance would save fully half the number of swings.

Work upon the north approach to the Willson avenue overhead bridge has been so far completed that the 60-foot girder span, which is the balance of the city's portion of the work, is now in process of erection, and it is hoped will be finished not later than February 1, 1898.

The pavement for the north approach is under contract, and bids have been received for the south approach, both will be completed as soon as the weather permits.

The embankment, masonry abutment and pedestals for a steel bridge over the tracks and the south approach to this bridge to be built by the N. Y., C. & St. L. Ry. Co., are completed, and the superstructure has so far progressed that the entire structure, it is hoped, will be completed not later than March 1, 1898.

The entire structure will be about 1,105 feet long, and will extend from a point 125 feet north of Julia street on the north, to Bower street on the south. The roadway of the bridge will be about 25 feet above the tracks of the N. Y., C. & St. L. Ry., with a descending grade of $\frac{1}{2}$ foot per 100 feet to the north and about $2\frac{1}{2}$ feet per 100 feet to the south. The whole structure will cost about \$105,000.00, of which amount the N. Y., C. & St. L. Ry. Co. will pay about \$70,000.00, the city \$25,000.00, and the Cleveland Electric Railway Company \$10,000.00. This structure, when completed and in use, will be the most noticeable improvement of the year.

A portion of the land required in the construction of the new Center street bridge has been purchased and the balance is being secured by appropriation or purchase. This bridge will be of the ordinary pivot pattern, with the center pier wholly upon the westerly side of the channel. One arm of the bridge will be about 145 feet and the other about 100 feet long. This should give fully 114 feet clear waterway for vessels.

The bridge, with foundations, motive power and the necessary land will cost about \$120,000.00, and, it is hoped, will be completed without delay, as the present structure should have been replaced by a new and modern bridge of wider roadway and channel, and quicker movement long ago.

Middle Seneca street bridge, to which attention was called in my former report, should be supplied with a new turntable and with new motive power, as the slow movement of this bridge by hand power, in its peculiar location, is a source of great delay to public travel, and the proper navigation of the river, which at this point is both crooked and narrow, and well deserves its name of "Collision Bend."

If the necessary funds were at hand, or can be secured for next year, I recommend a more radical treatment of this part of the river by the entire removal of the present bridge, with its pier in the center of the channel, and the erection of a new and much longer structure, with its center pier wholly upon the west-erly side of the channel, the purchase of two triangles of land for bridge purposes, and a further purchase of land from the right and left sides of the channel below the bridge to allow an easier and wider passage for vessels at this sharp deflection of the river. Such change would give a clear channel at the bridge of about 125 feet. Below the bridge the channel could be widened from 30 to 50 feet in its most difficult part. The new bridge would cost about \$75,000.00; additional land for the same perhaps \$30,000.00 more. The land for widening the channel below this point, as suggested, might add \$35,000.00, which latter expense should be charged to River Widening.

The expense of such change would be about \$140,000.00. The present structure could be moved to the proposed new channel, which has been suggested for straightening the river about 500 or 600 feet west of Jefferson street bridge, where the channel would be nearly straight for some distance upon either side, and this bridge with a pier in the center of the channel would serve an excellent purpose. Its removal and erection in the new location, I think, would not cost to exceed \$40,000, not, of course, including land, docking and dredging for the new river channel, which latter might of itself cost from \$100,000.00 to \$120,000.00, and should be charged to River Widening.

Jefferson street bridge is an old structure and must soon give place to a new one. The north abutment is so far undermined as to require renewal this season, or at a very early date, to prevent accidents. This is estimated to cost about \$12,000.00. To build a new bridge at this location is inexpedient, as the river is so crooked and confined at this point that it is subject to the worst ice gorges in the entire river. It is therefore evident that both a new bridge and a new channel at this point are matters for serious consideration.

Land, with necessary slope rights, for the new Willett street Viaduct over the valley of Walworth Run has been secured to the amount of \$10,415.95. The additional land required may increase the amount to \$13,000.00. In my annual report of 1895, I estimated the cost of this structure, not then authorized, at from \$110,000.00 to \$120,000.00, but for some cause the amount appropriated for this work was only \$90,000.00, including land damages. This amount I deem insufficient for the erection of a suitable structure at this important crossing, and would recommend that an additional \$15,000.00 be asked for at the coming session of the Legislature.

As planned, the structure will be of steel, 56 feet wide and 900 feet long, including earth approaches. There will be a 40-foot roadway and two sidewalks of 8 feet each.

Land and slope rights will be required for the Warner road improvement to the amount of about \$14,000.00. The work is already advertised for the new 25 foot span stone arch culvert over Mill creek as a part of the improvement, and work is expected to commence early in the spring.

The embankment, which is the largest part of the improvement, raises the grade of the street at the intersection of Turney avenue about 16 feet, and is designed in part to carry the sewage from the State Hospital for the Insane across the valley of Mill Creek to the city sewer in Broadway, for which purpose the State is to contribute \$10,000.00 toward the improvement.

It is claimed that this appropriation will lapse in February next if the money is not used before that time. Steps should be taken as soon as the Legislature convenes to extend the time of payment, as it will be impossible to use the money before that time.

The close proximity of Mill Creek to the heavy embankment at the intersection of Turney avenue made it necessary to purchase additional land and slope rights, pushing the embankment farther away, or to construct heavy and more expensive retaining walls along the stream. The former plan is much cheaper and better and has been adopted.

The improvement will extend from Broadway to the city limits at Grand Division avenue, and will cost, approximately, \$42,583.00. Of this amount the city is to pay for the culvert, street intersections, and one-fiftieth of the entire expense. The State, as aforesaid, will pay \$10,000.00. Sixty per cent. of the balance, including land damages, is charged to the property on Warner Road and 40% to all the property in the city upon the west and south sides of Mill Creek.

Seneca street wooden bridge, extending over the tracks of the C. & P. R. R. and the L. S. & M. S. Ry. east of the Union Depot, was completed early in the season, at a cost of about \$8,500.00. The bridge has a 16-foot roadway, and a 4-foot sidewalk upon the easterly side. It consists of a single span of 160 feet over all the tracks, and an inclined roadway extending easterly about 400 feet, making an easy approach to the lake at this point. The bridge is at present used by teams conveying earth to the lake for filling, as is being done at Erie street.

The widening of the river upon each side of Main street bridge will necessitate a new west abutment or the reinforcement of the old one. This should be a part of River Widening, and would cost, with new docks and dredging, from \$12,000.00 to \$16,000.00.

The changing of the channel under the Superior street Viaduct will also necessitate the reinforcing of the heavy stone abutment supporting the westerly end of the draw span, and also the easterly end of the last of the series of heavy stone arches of the Viaduct. This work is estimated to cost \$30,000.00 or more, and will be incident to and a part of the cost of River Widening.

Land has been secured for the proposed bridge to connect Martin and Praha streets to the amount of \$3,725.00. The additional land required at the westerly end and slope rights at the easterly end will add about \$8,275.00 more.

This bridge will open a new and important crossing over the tracks of the N. Y., P. & O. R. R. The structure, which will be of steel with earth approaches, will be about 675 feet long, and is estimated to cost, with land and damages, about \$37,000.00, and is expected to be completed in 1898.

Marked progress has been made by the L. S. & M. S. Ry. Co. toward the construction of the stationary bridge under its tracks at the head of the Old River Bed, as per agreement between the company and the City of last year.

This bridge will be 100 feet long, and will span a 60-foot channel to be dredged and docked for the passage of tugs and small craft into the lake at this point. The bridge will also span a 40-foot roadway alongside said channel, to be used as a highway or for the passage of railroad tracks to the lake front, as may hereafter be determined by the City.

Piling has been driven to support the tracks of the company, an open passageway excavated the full width of the bridge, and one abutment is now well under way.

Winslow street bridge, over the tracks of the N. Y., P. & O. R. R., should be renewed by the railway company and made the full width of the street. This bridge is very old, very narrow and too light for the occasional heavy loads passing over the same. It should be rebuilt by the company the coming season.

The painting of the Central Viaduct, commenced in 1896 and partially completed, should be finished next year without fail, as should also the iron portion of the Superior Street Viaduct.

The stability and safety of these important structures depend upon their immunity from rust, far more than from wear.

The roadways, including paving and flooring, on the Central, Kingsbury and Pearl Street Viaducts are being, or are to be, replaced by a double course of white oak plank in each case except the east half of the roadway on the Pearl Street Viaduct, where creosoted white pine flooring planks and 5-inch paving blocks are to be substituted for the long leaf southern pine flooring planks and paving blocks heretofore used on all the viaducts with little success, as the paving blocks especially have lasted only from 4 to 5 years, decaying long before they are actually worn out.

About \$7,600.00 has been expended upon the Central and

Kingsbury Viaducts. About \$13,280.00 will be required to complete the same, of which amount \$6,730.00 is under contract. Bids have been received for the material for the Pearl Street Viaduct to the amount of \$1,400.00. It is expected that the work will be completed during the winter.

At the request of His Honor the Mayor, made early last spring, I have had the Central Viaduct structure thoroughly inspected in every part by expert engineers outside of my department, who report that they find the structure in safe and perfect condition in all its parts, except that the iron work should be painted and that the flooring plank should be renewed in several places.

This report corroborates the report made to me in 1896 by the Superintendent of Bridges, as to the good and safe condition of this bridge, as referred to in my annual report of last year.

Such examinations and reports upon these large structures are reassuring to the administration and to the general public, and should be more frequently made.

While on the subject of bridges I cannot refrain from strongly impressing upon the administration and Council the necessity of using every effort to have the piers of all railroad swing bridges removed from the center of the channel and placed upon one side whenever a permit is asked for, or an attempt made to rebuild or renew any of the present structures so located, or to build new ones.

The City should be equally observant of such a policy in regard to its own bridges.

SURVEYS.

The surveys made during the year, as given in Table No. 9, number 245.

The principal surveys of the year were the surveys of Morgan Run valley, from Broadway to the Cuyahoga River, and of Kingsbury Run valley, from Kinsman street to the Cuyahoga River.

All the adjacent street and original lot lines, and many property lines, were defined, and a general topography of the territory mentioned was made.

An extensive and thorough survey was made of streets located in the Barber and Lord's allotment, within the territory bounded by Monroe, Willett, Fulton, York and McLean streets. The street lines were determined, according to the record of said allotment.

Surveys were also made of the Lake Shore Boulevard, from Doan street easterly to the first angle east of Adams avenue in Collinwood, and of the parcel of land, and its topography, purchased by the city for the intercepting sewer outlet.

The following surveys were made for the opening and extension of streets: Central avenue, from Alanson street to Doan street; Woodward place, from the present easterly terminus to Republic street; Halsey street, from Cedar avenue to Quebec street; Brownell street, from Woodland avenue to Orange street; Gustave court, from its westerly end to Brighton street.

Surveys were also made for both of the routes for the proposed Willett street viaduct, for the Martin-Praha street bridge, and of Warner road, Turney avenue, and approaches thereto.

Alignments and elevations were given for all bridges and culverts, etc., constructed during the year.

As has been the custom for several years past, surveys were made of all streets previous to their improvements.

An unusually large amount of office work was done, caused by the many appropriation cases, the Cuyahoga River improvements, and the indexing, keeping up and classifying of the records.

Surveys for the location of lost or displaced monuments is also a large item, as will be seen by reference to Table No. 15.

SUBDIVISIONS AND PLATS.

Thirteen (13) plats of maps or subdivisions were submitted to the Division of Surveys for examination and correction, before being approved by the Board of Control and Council. The list, with name and location of plat, and the date of its approval by the Council, will be found in Table No. 10 of this report.

NEW STREETS AND ALLEYS.

Thirteen (13) new streets and alleys were laid out and dedicated to public use in the new subdivisions, aggregating $1\frac{1}{4}$ miles in length.

The name, length and location of the new streets and alleys, with the date of dedication will be found in Table No. 14.

STREET MONUMENTS.

With the growth of every city, and the increasing values of land property incident thereto, the location and preservation of all monuments designating street and property lines, becomes each year, more imperative and vital.

The most serious menace to the preservation and safety of street monuments is the construction of sewers, water and gas mains, electrical conduits and car tracks, which are each year becoming more numerous and aggressive, as they crowd upon each other for the occupancy of public streets.

More than usual care has been taken this year to preserve the location of these monuments when making street improvements. When the location of monuments are matters of public record with the County or City, or are known to this office, their locations are referenced and carefully guarded by cross lines, stakes and points set by instrument, before the improvements are made or the monument disturbed.

All such stakes, lines and points are carefully guarded and frequently tested and strengthened, from time to time after the improvement has been completed, and until the ground has ceased to settle or change position, when the monument is then reset from the same reference points made before its removal.

All such reference points, lines and stakes are platted in proper books kept in the office vaults, and are open to the inspection of all surveyors, under proper regulations.

With all our care, some monuments are lost and have to be replaced, often by extensive surveys, and even then there is often a suspicion, quite often a direct charge, that the monument was not replaced in its original position.

The referencing, care, replacing and preservation of all street monuments should be placed in charge of one party in the Division of Plats and Surveys, who should be held strictly accountable for all losses and displacements of street monuments and landmarks.

Street monuments are usually made of stone, from 24 to 30 inches in length, 8 to 10 inches square at the base and dressed to 6 inches square at the top, with a $\frac{3}{8}$ -inch hole from 1 to 2 inches deep drilled in the top at its center.

River survey monuments, defining established dock lines, are similar in form, with "R. S." and number of such stone cut in top.

Number of monuments referenced during the year.....	239
Number of monuments reset from reference	89
Number of monuments tested.....	121
Number of monuments reset from surveys.....	68
Total.....	517

HOUSE NUMBERING.

Nineteen (19) streets were numbered or re-numbered by this department under special resolution of the Council; the length of the streets was $7\frac{3}{4}$ miles.

Surveys are made of each street numbered and all buildings accurately located upon the street. A number is assigned for each 20 feet of space in the residence and 15 feet in the heavy business portion of the City, without reference to lot frontages.

Under the present system of street numbering, No. 1 commences on the right hand side of all streets, at the northerly or lake end of all streets running in a northerly and southerly direction, and at the river end on all streets running in an easterly and westerly direction.

The present method of placing the numbers upon the houses, after the surveys are completed, maps made and numbers assigned by this office, is entirely unsatisfactory both to the property owners and to the City.

The person designated as house numberer is allowed to collect 25c. from each house owner, after painting and placing upon

house the proper number, which consists of plain black figures on a small zinc plate tacked to the building. Very many persons do not pay for such a number, often because of its cheapness, and because they did not want their houses re-numbered, or because they have no money at hand to pay for the same and refuse to allow their numbers to be changed.

In my judgment, the City should pay the cost of putting up street numbers, and after a reasonable time should cause the old numbers to be removed from the houses to prevent the duplication of numbers upon the same street. This work should be done by the Police Department, or by a proper officer clothed with police powers, as no other would be likely to succeed in securing where serious objections are sure to be made to such change, if done well and thoroughly.

On the streets numbered during the year 4,100 numbers were issued, 626 buildings were located and platted and 654 numbers were put up.

STREET LEVELS AND CROSS-SECTIONS.

Levels are run and profiles are made of all streets and alleys so that the grade can be established or any kind of improvement can be made upon them. If the street is to be graded or paved, cross-sections are made and quantities worked out in advance of improvement.

One hundred and fifty streets and alleys were leveled or cross-sectioned during the year, aggregating 22.9 miles.

STREET GRADES ESTABLISHED.

Ordinances were written and grades were established on 44 streets, aggregating 9.9 miles. One or more working profiles are made of each street, and one is also platted in the profile books, in which reference is made by volume and page in the ordinance establishing the grade.

ZERO OR BASE OF LEVELS.

All street improvements are made from the same datum or base of levels, which is described in an ordinance of the Council, passed in 1854, as being the (then) surface of water in Lake Erie,

2 feet below the south end of the stone parapet wall of the old U. S. Government pier at the mouth of the Cuyahoga River. This plane was said to be 564 feet above tide water at Albany. Recent and more accurate levels place the elevation somewhat greater above tide water at that point. The original "bench mark" described in the ordinance referred to has long since disappeared, but not until scores of elevations had been taken from it and transferred to more permanent and accessible points throughout the city, and are matters of public record.

The datum, or "zero of water gauge," as it is termed, used in all dredging work is the U. S. Government zero, and is 2.34 feet below the city base, which latter, owing to the receding of the lake surface, is now from $2\frac{1}{2}$ to $3\frac{1}{2}$ feet above the latter.

STREET LIGHTING.

The streets of the city were lighted at the close of 1897 by 5,249 gas street lamps, 4,460 vapor street lamps and 854 electric street lamps, a total of 10,563 lamps.

This shows a decrease of 849 gas lamps, 175 vapor lamps and an increase of 354 electric lamps, making a total decrease in number during the year of 670 lamps.

The total cost of gas, lighting, extinguishing and

taking care of the gas lamps for the year is...	\$ 97,818 14
The cost of vapor lamps is.....	66,319 25
The cost of electric arc lamps is.....	62,778 20

The total cost is..... \$226,915 59

The cost of lamp posts, lanterns, supports, tips and burners, repairs and new work is \$7,578.19.

The cost of lighting the City Hall \$3,144.88, and of lighting Superior Street Viaduct \$30.88; the salary of the Gas Inspector is \$1,000.00.

This makes the total cost of lighting the public streets, the City Hall and the Superior Street Viaduct for the year \$238,669.54.

The cost for each gas lamp, including gas, care and maintenance, is \$16.78 per year of 3,760 hours on the east side of the

, and \$16.85 per year on the west side of the river, and for lighting the cost per lamp is \$13.98 per year. A deduction made on the vapor lights for diminished candle power and hours of burning, which during the year reduced the average cost per lamp to \$12.52.

The cost of electric arc lamps of 2,000 candle power per year is \$4.80 per lamp.

In gas lighting the city owns all lamps, posts, service pipe and fixtures. In vapor lighting the city owns the posts only, but in electric lighting all lamps, wires and fixtures are owned by the company.

The number of electric lamps was increased nearly 70% during the year, showing the increasing popularity of this light, although the cost is materially greater than other lights.

The 344 new arc lights erected during the year cost \$8,542.45 more than the 1,391 gas and vapor lights which were displaced and have cost.

Each new arc lamp lighted during the year displaced upon an average of 4.2 gas and vapor lamps. To make the cost equal those displaced, the average should be 5.6 for each new arc lamp. This is largely due to the fact that our blocks are longer and are found in most cities, and less frequent intersections, so that each arc light displaces a greater number of gas or vapor lamps than can be done by the intermediate lamps.

The price of gas to the City and to private consumers is 80 cents per 1,000 cubic feet.

Both gas companies pay into the City Treasury $6\frac{1}{2}\%$ of their gross receipts each year, which amounted to about \$58,300 in 1897. This fund is now about \$271,600, and is to be used for the erection of a new City Hall.

SIDEWALKS.

All sidewalks are laid by or at the expense of abutting property owners.

Resolutions are passed by the Council, requiring flagging to be laid on certain streets. At the close of the season, all walks not laid, as ordered, are placed upon the tax list as delinquent. A special tax is collected for the same, and the work is done by the city the next season.

10,935 square feet of walk were reported as delinquent, and after delays occasioned by readvertising and other causes, a contract was entered into with M. P. Platten to lay the walks, but owing to the lateness of the season only 4,202 square feet were laid in 1897, leaving a balance of 6,733 square feet to be laid in 1898, together with 540 square feet to relay, including about 200 cubic yards of excavation to be done in connection therewith. The price for new sawed flagging laid is $12\frac{1}{2}$ cents per square foot.

By far the greater portion of all the flagging in the City is laid by the owners, either with or without notice from the City. Table No. 21 shows that 8.97 miles of sidewalk grades were given during the year by this Department. Assuming that 90% of the length of streets was laid with 6 foot walks, and the balance with 5 foot walks, we have the approximate sum of nearly 279,500 square feet of flagging added during the year, to the very large amount of flagging already laid in the City, which is a notable feature of Cleveland streets.

HOUSE SEWER AND WATER CONNECTIONS.

The putting in of all necessary water and sewer connections to curb line in advance of the paving of any street or alley is made compulsory when ordered by the City, and if not put in by the owner after due notice—usually ten (10) days—the work is done by the City and charged against the lot owner and is paid with his other taxes.

Connections carried to the street line and into the lot are voluntary on the part of the owner, except in cases where the Health Officer declares a nuisance, in which case the connection is made obligatory.

All sewer connections are put in by licensed sewer builders, who receive a yearly license to do such work. There were 104 persons licensed to put in sewer connections and 131 licensed plumbers in 1897.

One dollar and fifty (\$1.50) cents is paid to the City by the sewer builder for each permit taken out, and is used to defray, in part, the cost of inspection, but it is insufficient for this purpose, and the City is at an annual loss for inspecting these connections.

price should be \$3 for each permit, the same as when the ordinance was first passed. The City should then do the puddling in the trenches. This puddling is now imperfectly done by the contractor, or often not done at all, and is thereafter a source of public complaint, and also serious complaint from the paving contractor, who must guarantee the pavement he afterwards lays down. All water connections are in charge of the Water Works Department.

A careful examination of each lot of the 36 streets thereafter paved showed that 5,256 connections, both sewer and water, were required to accommodate the property on these streets. Of the number required only 3,657 connections were found already in place, requiring 1,599 new ones to be carried to the curb line. The property owners put in 1,559 of these connections and the City had 40 to go delinquent, being a little more than $2\frac{1}{2}$ per cent. of the number to be put in. These were put in by the City at the expense charged against the owners. This work is in charge of the Notice Clerk, and all work is done under his supervision.

The Permit Clerk issued 3,184 permits for house sewer connections of all kinds during the year: 2,678 of these permits were for new connections and 506 for repairs of old connections or extension of others from curb line to property; 907 of the sewer connections put in were ordered in to the curb line by the City in advance of paving. Of the remaining 1,790 voluntary connections put in by the owners, only 75, or a little more than 4 per cent., were put in where pavement had to be displaced. This shows the wisdom of requiring all connections to be put in to curb line before pavements are put down.

All of the above work, except connections ordered to curb line, was in charge of the Permit Clerk and done under his supervision.

All connections are put in under the City's supervision as to the manner of doing work, depth of sewer, grade and alignment, location at curb, location where connection enters the lot, size of connection, and as to whether it was made with the registered sewer junction for such lot, or whether a new opening had to be made in the sewer, all of which is reported to the office and proper repairs made.

All repairs to pavements taken up to put in sewer and water connections are made by the City and the expense charged directly to the sewer builder or plumber, and by them to the property owner for whom the work was done.

Previous to last year these charges were made after the work was done, and were often very difficult to collect and quite often were never paid, resulting in a loss of many hundred of dollars to the city.

Following a suggestion made in my former report, an ordinance was passed by the Council in March, 1896, requiring payment in advance of the estimated cost of the pavement to be relaid, based on a schedule fixed by the Director of Public Works.

FRONTAGE AND OWNERSHIP MAPS.

Tracing and blue print maps for street improvements were made by the Draughting Department for 185 streets, aggregating 50.26 miles.

These maps show frontages and owner's names, for use in the City Clerk's and Auditor's departments in serving notices of proposed improvements and making up assessment sheets for the same. Other maps showing frontages only are made for the Sewer Department for sewer plans to be presented to the Board of Control for adoption.

ELECTRIC SUBWAYS AND CONDUITS.

Under the authority of Section 1090 of the Codified Ordinances of the city, and of said section as amended August 24, 1896, a large amount of electrical conduit work has been done during the year.

Under the provisions of said amended section, all electric wires now in use in all of the main thoroughfares in the downtown district, are ordered placed underground within 1 to 4 years, as in each case specified.

The Western Union Telegraph Company has, during the year 1897, constructed 1,822 lineal feet of subways or conduits, and has placed therein 3,322 feet of wrought iron pipe, making a total of 8,877 feet of conduit, and 18,955 feet of pipe in the City.

The Postal Telegraph Company now has 14,236 lineal feet of conduit in the City, inclosing 64,305 lineal feet of iron pipe, and no work in 1897.

The American District Telegraph Company has 5,000 lineal feet of subway, inclosing a like amount of 3 inch iron pipe, in the City, but added nothing in 1897.

The Cleveland Telephone Company put down 14,219 lineal feet of subway this year, inclosing 81,556 lineal feet of terra cotta pipe during the year. The Company now has 95,532 lineal feet of subways, inclosing 659,183 lineal feet of terra cotta pipe in the City.

The Home Telephone constructed during the year 4,471 lineal feet of subways, inclosing 31,064 lineal feet of terra cotta pipe, making a total in the City of 15,740 lineal feet of subways, inclosing 116,347 lineal feet of pipe.

The Cleveland Electric Illuminating Company put in 15,176 lineal feet on conduit during the year, inclosing a like number of wrought iron pipe from 1½ to 3 inches, and 4½ inch terra cotta in diameter. The company now has 58,176 lineal feet of conduit in the City, and about 245,797 lineal feet of pipe.

The total amount of subways of all kinds in the City at the end of 1897 is 37.84 miles, inclosing 1,117,362 feet of pipes. All streets disturbed were taken up and put down by the company, under City supervision. Table No. 22 shows the amount of conduit work done during the year in detail.

CONCLUSION.

The following 22 tables will give you in detail the work of several divisions of the Department. The vast amount of the work which requires the time and energy of the office is not and cannot be shown in the tables, and only those who like yourself, frequent this office can well appreciate the extent and nature of this unclassified work.

In conclusion, I desire to express to you my appreciation of your forbearance and kindness extended to me and my Department and by Deputy Director W. P. Chard, in the discharge of my official duties.

To His Honor the Mayor, and to the several members of the Board of Control and Council I also wish to express my appreciation of courtesies received at their hands.

I also desire at this time to express both my personal and official recognition of the services rendered this Department and to the city by the various members of Divisions. To Mr. C. G. Force, Assistant Chief Engineer; to W. H. Burns, of the Division of Roads and Pavements; E. E. Boalt, of the Division of Sewers and Drains; J. T. Pardee, of the Division of Viaducts and Bridges; A. Strehler, of the Division of Plats and Surveys, and Otto Dercum, Chief of the Draughting Department, as the heads of their respective divisions, and to all the members of the force I desire, at this time to express my appreciation of the efficient services rendered by them during the year just closed.

Yours, very respectfully,

M. E. RAWSON,

Chief Engineer.

Cleveland, O., January 21, 1898.

DEPARTMENT OF PUBLIC WORKS.

Report of the Inspector of Gas.

Report of Inspector of Gas.

Hon. George R. Warden, Director of Public Works :

I have the honor to submit the annual report of the Inspector of Gas, for the year 1897.

During the year, some apparatus has been purchased and the municipal gas laboratory with a few additional pieces of apparatus will be complete.

The City Ordinance, No. 2632, reads: It shall be the duty of the Inspector of Gas to make semi-weekly photometric and other tests of such gas, and to keep a record of the pressure, quality and candle power of the same.

The following determinations and tests are made in the examination of gas, candle power, quantity of sulphur and ammonia, percentages of carbon dioxide, illuminants, oxygen, carbon monoxide hydrogen, methane and nitrogen.

CANDLE POWER.

The gas furnished to the consumers of Cleveland, must not be of less than 18 candle light power i. e., of such a quality, that a burner consuming 5 feet thereof, per hour, at a pressure not exceeding $\frac{1}{8}$ of an inch, at the photometric burner shall give a light of not less than 18 standard sperm candles, each consuming 120 grains of sperm per hour.

The test for candle power shall be made at places not more than one mile distant from the gas works.

SULPHUR IN THE GAS.

Sulphur is considered an impurity of gas and is therefore reduced to as low a percentage as possible by the gas companies.

The quantity of sulphur is limited in many cities to 20 grains per 100 cubic feet, but Cleveland has not set any limit.

For the determination of sulphur the Drehscmidt method is used.

This method with an absorption tube for the air supply containing an oxidizing liquid can be said to be the nearest to perfection of any method. It is simple, requires but little attention and does not generate an excessive quantity of heat.

The method used in England is the Referee's method, which is crude and does not according to many experts who have thoroughly examined it, determine all the sulphur.

The compound of sulphur, known as hydrogen sulphide, is detected by placing a strip of paper moistened with lead acetate in the gas stream issuing from a burner tip for a minute.

A coloration proves the presence of hydrogen sulphide. If this simple test does not show its presence it is considered as being removed.

Sulphur exists in Cleveland gas mostly in the form of sulphides of the hydro-carbons.

Average for the year, 21.55 grains per 100 cubic feet.

AMMONIA COMPOUNDS.

Ammonia is considered an impurity of gas and has for this reason been determined semi-weekly.

If the gas is not washed thoroughly ammonia is always found in considerable quantities.

The quantity of ammonia allowed in the gas in different cities varies from 2 to 10 grains per 100 cubic feet.

As ammonia has a market value and its removal is comparatively easy, the quantity of ammonia found is always below the lowest standard, i. e., 2 grains of ammonia per 100 cubic feet of gas.

CHEMICAL ANALYSIS OF THE GAS.

A complete analysis of the gas manufactured by the Cleveland Gas Light Company has been made semi-weekly.

A very fair idea of the quality of a gas can be gained from a chemical analysis.

The illuminants comprise the light-giving portions of the gas.

Carbon monoxide gives to water gas its poisonous properties but in coal gas it exists in much smaller percentage.

A large quantity of oxygen, together with a high percentage of nitrogen indicates the presence of air in the gas.

Nitrogen in well-managed gas works is invariably kept below 6%.

TABLE NO. 7.

VAPOR BURNERS.

Fifty street vapor burners are tested each month to determine the candle power of the burners for that month. The contract with the lighting company specifies that the average candle power of the 50 burners tested must be equal to that of 14 standard sperm candles and for every candle power less than 14 a 6% deduction is made in the compensation received by the company. The following table shows the results of the monthly tests:

Month.	Average Candle Power.	Per Cent. above 14 Candle Power.	Per Cent. below 14 Candle Power.	Month.	Average Candle Power.	Per Cent. above 14 Candle Power.	Per Cent. below 14 Candle Power.
January	15.72	72	28	July	17.73	88	12
February	15.00	58	42	August	13.81	50	50
March	11.58	22	78	September	11.26	32	68
April	12.07	38	62	October	13.82	46	54
May	9.89	10	90	November	15.23	62	38
June	11.54	32	68	December	17.56	68	32

Average for year 13.76 candle power.

METER INSPECTION.

Upon the written application of any consumer of gas made to the Director of Public Works and accompanied by an inspection fee of \$1, the meter is disconnected and taken to the laboratory of the Inspector to be tested.

The consumer is supplied with another meter during the time required for the inspection.

If the meter, upon inspection, shall be found fast or that it registers a greater volume of gas than actually passes it the inspection fee is returned to the person making the application.

If the meter is found to register no greater volume of gas than passes it, the gas company shall receive 50 cents of the fee for disconnecting and re-setting the meter, and the other 50 cents shall be paid into the City Treasury.

Five meters have been tested during the year with the following results:

Correct, 1.8% slow; 2% slow; 1% slow; .35% fast.

PRESSURE ON STREET MAINS.

The pressure on the street mains on both sides of the river is recorded constantly.

The pressure on the east side of the river varies from 1.1 to 1.5 inches during the day, and from 1.4 to 1.7 at night.

On the west side of the river the pressure during the day varies from 1.6 to 2 inches, and during the night from 2 to 2.5 inches.

The pressure is measured by a pressure register corrected by a siphon pressure gauge.

In the determinations of sulphur made in the city laboratory the average for the year is above 20 grains per 100 cubic feet of gas.

It is probable that the gas at the City Hall comes mainly from Gas Works No. 1 on Front street.

I have found it inconvenient and somewhat inaccurate to make a determination or any tests of gas on a sample of gas which has been carried in tanks to the laboratory and there tested.

To determine the sulphur in the gas, for instance, from Works No. 2, situated at the foot of Willson avenue, it would be necessary to carry the sulphur apparatus to the place selected and there make the determination of sulphur.

Apparatus for doing gas work of any kind is always expensive and is easily broken, and it follows that in order to do reliable analyses of gas from any gas works we should have apparatus permanently located near each works.

To cover the city satisfactorily several additional pieces of apparatus are absolutely necessary, and I cannot recommend too strongly that the needed apparatus be purchased soon.

Respectfully submitted,

CHAS. G. SNYDER,

Inspector of Gas.

REPORT
OF THE
Director of the Department of Police
OF THE
CITY OF CLEVELAND.

CLEVELAND, January 1, 1898.

To the Honorable Robert E. McKisson, Mayor:

SIR:—In accordance with law, I have the honor to submit herewith my Annual Report of the Department of Police, including the Divisions of Police and Public Health, Markets, Hay Weighers and City Sealer, and the condition of the several funds and accounts for the year ending December 31, 1897.

The reports of the heads of the various divisions will give in detail the condition of such divisions.

The total expenditures of the Division of Police during the year, as shown in detail by the report of the Secretary of Police hereto appended, were \$397,922.55, of which sum \$363,746.56 was paid for salaries of the Force and \$1,260.00 for the pound-keepers; \$2,592.67 for new buildings; \$1,164.22 for furniture; \$864.90 for horses; \$3,524.04 for horse feed, shoeing, wagons and harness; \$1,908.27 for patrol service and apparatus; \$3,001.29 for repairs to buildings and \$19,860.60 for all other expenditures of the Departments, as rent, interest, stationery and office supplies, fuel, light, water, miscellaneous supplies, telegrams, secret service, equipments, and other incidental expenses.

The amount thus expended was paid as follows:

From the Police Fund.....	\$392,218 15
From the Contingent Fund.....	3,241 26
From the Police Court Fund.....	2,463 14
Total.....	<hr/> \$397,922 55

The total number of arrests made was 14,481, against 13,491 for the previous year, being an increase of 990.

By authority of the Council the Force has been increased, on January 5th, 1897, by the appointment of twenty additional Patrolmen, one Captain and two Lieutenants; twenty-nine vacancies of Patrolmen, caused by death, resignations, dismissals and retirement were filled.

During the year the following promotions were made: Seven Patrolmen were promoted to Sergeants, and one detailed as Detective; three Sergeants were promoted to Lieutenants, and one detailed as Detective; one Lieutenant as Captain.

One Patrolmen died, four Patrolmen resigned, six Patrolmen were dismissed from the Force and one Lieutenant, one Detective three Sergeants and four Patrolmen were retired from active service and were placed on the Police Pension Roll.

Complaints and charges were preferred against thirty-seven officers for violation of the following rules: Neglect of duty, 21; intoxication while on duty, 2; intoxication while off duty, 4; conduct unbecoming an officer, 4; unnecessary violence to prisoners, 3; giving away police secrets, 1; feigning sickness, 1, and absence without leave, 1.

The disposition of the above charges was as follows: Acquitted, 3; resigned pending charges, 2; reprimanded, 3; fined \$5.00, 2; fined \$10.00, 14; fined \$20.00, 1; fined \$25.00, 5; and discharged from the Force, 6.

Again your attention is called to the fact that the efficiency of the Force is greatly impaired for want of more patrolmen, and an increase of at least one hundred is an imperative necessity. This number will no more than meet the just and reasonable demand of citizens in various parts of the city for better police protection.

I would also recommend the extension of the Police Patrol System in the Third and Fourth Districts and the erection and equipment of two additional Patrol Stations in the Third and Fifth Police Precincts.

Your attention is respectfully called to the reports herewith submitted of the Superintendent of Police, containing much valuable statistical information, Secretary of Police as to the financial matters and changes in the Force, and of the heads of

the several branches of the Department, which contain detailed statements of the performance of the duties, which they have in charge respectively.

In conclusion I desire to express my satisfaction and appreciation of the conscientious and efficient services rendered by the officers and men of the Force in the discharge of their duties.

Very respectfully,

E. A. ABBOTT,

Director of Police.

Report of the Secretary of Police.

Capt. E. A. Abbott, Director of Police :

SIR:—I herewith submit the following report of the Resources and Disbursements of the several funds, also the different changes in the Force for the year ending December 31, 1897.

Respectfully,

JOHN VANEK,

Secretary of Police

Report of the Superintendent of Police.

CLEVELAND, O., January 1st, 1898.

To Capt. E. A. Abbott, Director of Police :

SIR:—I have the honor to submit herewith the annual report of the Police Department for the fiscal year ending December 31st, 1897, together with a few suggestions to which reference at this time may not be deemed improper.

When it is taken into consideration that this city has an area of nearly 32 square miles of territory, with a large percentage of its population scattered, and 565 miles of streets to be guarded and patrolled, that our present force is inadequate to give proper protection to life and property of our citizens must be apparent to any person, who will take time to consider the subject.

Demands are constantly being made for increased police protection by citizens living in the outskirts of the city, as well as manufacturers and business firms through the central portion and along the river; they are taxpayers and these demands are reasonable and should be complied with, but this can only be done by an increase of the force. Crime grows in cities as the population increases; Cleveland is no exception in this matter. An increase of the force would be the greatest boon the Council could bestow on the citizens whom they represent.

The service of the Detective Department under the supervision of Capt. J. J. Lohrer must be classed as excellent. They have arrested and prosecuted many noted criminals and performed a large amount of work considering the smallness of their force.

The records of the past year show that active and persistent work has been done by the entire force, and at no time has the criminal element been permitted to gain the slightest hold.

Known thieves, crooks and suspicious characters have been and will be arrested at the first opportunity, and the driving of habitual vagrants out of the city, or sending them to the Workhouse has met with gratifying success. This class of criminals have learned that this city is not a suitable place for them to follow their vocation.

In conclusion, would say that the year just closed has been a creditable one to the Department. The conduct of the officers and patrolmen, as a rule, has been excellent. Often harsh criticism is made, when if the true facts were known they would be commended.

The poor and helpless in this city always find a friend in the policemen.

Respectfully submitted,

GEO. E. CORNER,

Superintendent of Police.

DEPARTMENT OF POLICE.

Report of Police Patrol Service.

JANUARY 1st, 1898.

Capt. E. A. Abbott, Director of Police :

SIR :—The following report of the workings of the Police Patrol Service for the year ending December 31st, 1897, is herewith respectfully submitted.

J. MURPHY,

Superintendent Patrol Service.

This branch of service comprises one fully equipped operating room at the Central Police Station, one complete operating switchboard each at the Sixth and Tenth Precinct Stations, six patrol wagons, five patrol stations, four horses in each station, 79 patrol boxes, of the interstate system, and 22 patrol boxes of the Gamewell system, and 20 boxes of the National system, 87 telephones, and 420 miles of wire ; the whole requiring the service of one superintendent, three operators and two linemen, four of whom are patrolmen, and six patrolmen at each patrol station, two of them are detailed as drivers at each station.

During the year several changes were made in our telephone department ; additions, removals, etc., requiring more underground cable wires. We are now using all our underground cable and two wires of the Cleveland Telephone Co. If any addition to our system is made during the coming year, it will be absolutely necessary to add to our underground system.

THE WORKINGS OF THIS DEPARTMENT FOR THE YEAR HAVE BEEN AS FOLLOWS:

Months.	Calls.			Mileage.	Wagon Nos.					Prisoners.		Transfers.		Calls.		Runs, but no Prisoners.
	Box.	Telephone.	Total.		1	2	3	4	5	Males.	Females.	Males.	Females.	Ambulance.	To County Jail.

- District No. 12, F. HONECKER, M.D., Wards 38, 39, 40 and 42-

Report of the Health Officer.

CLEVELAND, O., January 1, 1898.

Hon. E. A. Abbott, Director of Police :

DEAR SIR:—I have the honor to herewith submit to you the report of the Public Health Division of the Department of Police for 1897. During the past year every possible effort has been made to keep the expenditures of this Division to the lowest possible limit consistent with the efficient administration of affairs. The Secretary's report will show the total disbursements of the year to be \$39,761.66, expended in the following manner: For general purposes, \$36,850.95; for the removal of garbage, \$2,154.46; for bath house purposes, \$39.37; for Plumbers Examining Board, \$158.33; for Food Inspector's office, \$504.55; making a total of \$39,761.66, leaving a balance on hand January 1, 1898, of \$2,316.89. The total expense account for the year 1897 was \$334.06 less than for the year 1896.

DEATH STATISTICS.

The total number of deaths for the year 1897 was 5,007. The death rate is estimated on a population of 350,000, which is an increase of 20,000 over the estimated population of 1896. During the year 1896 4,859 persons of Cleveland died, showing an increase in the number of deaths for 1897 of 148 over those of 1896, yet it is with a great deal of satisfaction that I am able to report to you that the death rate has been reduced from 14.71 per 1,000 for 1896 to 14.30 per 1,000 for 1897.

DEPARTMENT OF POLICE.

BIRTH STATISTICS.

The total number of births reported to this Division for the year 1897 was 9,135, an increase over those reported for 1896 of 208.

The tables appended to this report contain information as to the color, sex, nativity and age of parents and give the comparative number of births for each month.

CONTAGIOUS AND INFECTIOUS DISEASES.

During the past year this Division has been enforcing the laws pertaining to contagious and infectious diseases, even more vigorously than during the year 1896. I have made an extraordinary effort to secure the co-operation of the physicians and midwives of our city in reporting cases of contagious and infectious diseases, and am pleased to state that we are now receiving a much more satisfactory return than heretofore. During the year 1897 there was reported to this office 256 cases of Typhoid Fever with 73 deaths from the same cause; 379 cases of Scarlet Fever with 20 deaths from the same cause; 456 cases of Diphtheria with 80 deaths from the same cause; 93 cases of Membranous Croup with 51 deaths from the same cause; 1958 cases of Measles with 8 deaths from the same cause; 16 cases of Erysipelas with 9 deaths from the same cause; 3 cases of Puerperal Fever reported with 5 deaths from the same cause; 122 cases of Whooping Cough with 25 deaths from the same cause; 37 cases of Chicken Pox with no deaths.

The above number of cases of contagious diseases, in my judgment is approximately correct with the exception of measles. I feel safe in stating that not more than one half of the cases of measles in our city have been reported to this office. This is due to the fact that this disease has been of a rather mild order, and the people did not consider it necessary to call in a physician, consequently the cases were not reported as required by ordinance.

I wish at this point to express my appreciation of the manner in which the school authorities are co-operating with our Division. Every possible effort has been made by the Director

and Superintendent of Schools to establish such regulations as have been suggested for protecting the school children from exposure to contagion.

Under this head I might also say that the Division has furnished gratuitously the administration of anti-toxin to the indigent poor of our city with most satisfactory results. Where the District Physicians have been able to attend cases of Diphtheria within 36 hours after the development of symptoms there has not been a single case of death when anti-toxin was administered.

BATH HOUSES.

The year 1897 has been one of decided success for the public bath houses. The number of bathers at the Kirtland street free public bath house was estimated at 20,000. The number of bathers at the Edgewater free public bath house was estimated at 34,000. The service rendered by the bath house keepers to the people using these popular resorts has been generally satisfactory. I take pleasure in reporting to you that there has not been a single accident at either of these places. The immense patronage of these two public bath houses has demonstrated that the free public bath operated by the city is very popular and useful.

SMOKE.

This division has been active during the past twelve months in attempting to enforce the anti-smoke ordinance. We made three arrests under this ordinance, the cases being brought to trial in the Police Court.

The Arcade company was made the principal defendant in these. The test case was on trial for a period of five months, at the end of which the Police Judge declared the ordinance unconstitutional. At the present time we are without an ordinance to prohibit manufacturers from permitting smoke and smut to be scattered broadcast over the city. A member of the Council has introduced a new ordinance, however, which, we trust, will meet all objections of the Court and place the division in a position to proceed with the suppression of this nuisance, thereby saving thousands of dollars annually to citizens and merchants.

GARBAGE.

It is with much satisfaction that I report to you that a contract has been awarded for the collection and disposal of the garbage and refuse of our city. Under the terms of the contract the new system is to be ready for operation about the middle of April. This subject is one which will require a great deal of careful attention by the Public Health Division in the future. An ordinance has been introduced regulating the collection of garbage, which I think will be satisfactory to the people and will greatly improve the general sanitary condition of our city, at the same time eliminating from our water supply a prolific source of contamination. This subject has been under consideration by the city for a great many years, and the citizens are to be congratulated on its final disposition.

PLUMBING INSPECTOR'S DEPARTMENT.

This section of our division is now better equipped for handling the work submitted to it than ever before. We have been fortunate in securing the appointment of two additional plumbing inspectors, enabling the force to perform its work without delay and annoyance to plumbers. The number of jobs and character of work performed by the Plumbing Inspector and his assistants are made known in the table, under this head.

GENERAL.

The management of the Food Inspector's office has continued to be most efficient. The character of the work performed in this department is varied and of unquestioned importance. It would be well if we had a broader law, permitting the Food Inspector a wider range of investigation and extended jurisdiction. The laws pertaining to the milk inspection are wholly inadequate, in that they do not permit an inspection of the dairy supplying milk to the city, and do not give the Health Division sufficient power for bringing prosecutions against persons furnishing the city an inferior quality of milk.

The District Physicians merit the highest commendation for the faithful manner in which they have performed their work. All persons applying to them for professional service have been given the closest possible attention and furnished gratuitously with medicine. Some of our districts are entirely too large and relief should be given by the appointment of additional physicians. Some of the district physicians have been required to make as many as 275 calls per month. I would earnestly recommend the appointment of four additional district physicians, in order to meet the demands made upon the Division.

For several years the subject of establishing a city Department of Bacteriology has been agitated by the various medical societies of our city. This question is one which I believe should receive most earnest consideration by the City Council in order that provisions may be made whereby such a department may be created at an early date. The City of Cleveland is the only large city of the United States which does not possess such a Laboratory. Such an institution would be of inestimable value in rapidly determining the character of contagious and infectious diseases, thereby permitting a quarantine to be quickly established in cases of contagion or infection. For the purpose of informing myself on this subject I have corresponded with the Health Authorities of fifteen of the largest cities of the United States inquiring if they had such a department in their city. I have received affirmative answers in each case so that today our city stands alone among the leading cities of the country in this line of scientific work.

I would earnestly request that you use every endeavor to secure for our City the establishment of a Department of Bacteriology which I am confident will more than compensate for the necessary outlay by the additional safeguards it will place about the people.

In conclusion I desire to express my gratitude and appreciation for courtesies extended by yourself and for assistance rendered by the employes of the Public Health Division.

I have the honor to remain,

Yours very truly,

J. L. HESS, M.D.,

Health Officer.

SECRETARY'S REPORT.

Dr. John L. Hess, Health Officer:

DEAR SIR:—I have the honor to herewith respectfully submit to you the Twenty-fifth Annual Report of the Secretary of the Public Health Division, Department of Police, City of Cleveland, for the year ending December 31st, 1897.

Economy in every particular has been our constant practice during the entire year.

MORTALITY STATISTICS.

The total number of deaths in the City of Cleveland during the year 1897 was 5,007 an increase of 148 as compared with 1896, but with an increase of population over 1896 of 20,000. For information as to age, color, sex, nativity, cause of death and social relations of the deceased you are respectfully referred to the tables appended.

BIRTH STATISTICS.

The number of births in the City during 1897 was 9,135, being 208 more than occurred in 1896. The tables annexed to this report will inform you as to color, sex, nativity, age of parents and the comparative number of births monthly, to which you are respectfully referred.

MILK LICENSES.

Milk permits issued during the year 1897 were.....	1,745
To persons selling from wagons.....	603
To persons selling from stores and houses.....	1,142

A fee of one dollar (\$1.00) was charged for each permit.

SLAUGHTER LICENSES.

During the year one hundred and twenty-seven (127) licenses were issued to slaughter stock, dress poultry, render fats, to engage in the manufacture or production of fertilizers or glue, and the cleaning or rendering of intestines. For each a fee of ten dollars (\$10.00) was collected.

BIRTH AND DEATH CERTIFICATES.

There were issued during the year one hundred and forty-nine (149) death certificates and (3) birth certificates; for which a fee of one dollar (\$1.00) each was charged. Also during the year there were fifty (50) free death certificates and thirteen (13) free birth certificates issued to the widows and orphans of soldiers of the late war.

DEPARTMENT OF POLICE.

PERMITS TO REMOVE BODIES.

During 1897 four hundred and thirty-four (434) free permits were issued to remove bodies from this City to other cities and localities.

PRIVY VAULTS.

Free permits were granted during the year for building of one hundred and ninety-four (194) privy vaults. These were built in accordance with plans and specifications furnished by this office.

PLUMBERS' LICENSES.

In accordance with Section 4 of the State law "To Promote the Public Health and Regulate the Sanitary Construction of House-drainage and Plumbing," passed April 21, 1896 (O. L. Vol. 92, page 263), the sum of \$568.00 was collected for licenses during the year 1897 and deposited with the City Treasurer to the credit of the Sanitary Fund. Said deposit being in accordance with Section 8 of said law.

LIVERY LICENSES.

In pursuance of the State law governing livery stables, passed April 18, 1893 (Local O. L. 90, page 110), there were eighty-seven (87) permits issued in 1897 to the City Clerk by this office on which he granted licenses, collecting a fee of one dollar (\$1.00) each, the same being credited to the Sanitary Fund, as per provision of Section six (6) of said law.

The statistical tables accompanying this report contain the full data regarding the Relief of the Poor, Contagious Diseases, Births, Nuisances abated, the Mortality of the City, etc. The reports of the Food Inspector, Inspector of Plumbing and Sewers, Smoke Inspector, United States Weather Bureau of Cleveland and Superintendent of Markets are also appended.

Thanking the Director and you for many uniform courtesies,
I am,

Yours respectfully,

FRANK COMBES,

• Secretary.

TABLE No. 13.
UNITED STATES WEATHER BUREAU.
Annual Meteorological Summary of Cleveland, Ohio, for the year ending December 31, 1897.

[illegible]

Report of the Superintendent of Markets.

Hon. E. A. Abbott. Director of Police :

DEAR SIR :—I herewith submit to you the following report, Division of Markets. These articles were confiscated by myself and deputies during the year 1897.

193 carcasses of veal.
117 " " sheep.
67 " " hogs.
29 " " beef.
523 chickens, ducks, geese and turkeys.
43 hams.
1157 lbs. of fish (different kinds).
615 lbs. of corned beef and pork.
65 lbs. of tripe.
397 lbs. of fresh beef, pork and sausage.
216 dozen of eggs.
14 bunches of bananas.
7 bushels of beans.
3 bushels of peas.
37 crates of strawberries.
9 crates of blackberries.
23 baskets of tomatoes.
4½ boxes of oranges.
1⅔ boxes of lemons.
69 illegal measures.

Respectfully yours,

BENJ. ATKINSON,

Superintendent.

Report of Smoke Inspector.

JANUARY 17TH, 1898.

Dr. J. L. Hess, Health Officer :

SIR:—I herewith present report of work done by me in this Department. The prevention of smoke to comply with the City Ordinance now in force is no longer a problem. If there are those who maintain smoke cannot be prevented to such an extent as to be inoffense they must be willfully blind. There are four ways in which smoke may be prevented as follows :

1st. Automatic stokers for feeding the coal into the furnace steadily. This plan shows good results both as regards saving of fuel and prevention of smoke, but will hardly come into general use on account of the cost.

2d. Various devices in the steam jet line while a number of them are new some are showing very good results, but are liable to burn out or get displaced.

3d. Coking chambers and admitting air to the coals through openings in front or sides of the fire box and usually by the aid of steam jets.

4th. Change of fuel, that is by the use of Hard Coal, Coke, Petroleum Coke or Pocahontas Coal. Either one of these kinds of fuel will in my judgment comply with the Ordinance

Number of notices served during the year, 176; under the new Ordinance total, 340; visits made to merchants and manufacturers, 504; complaints attended to, 42; Murphy stokers put in, 4; Brightman stokers, 10; Ohlstrom stokers, 2; Wyman stokers, 3; American stokers, 2; Hawley Down Draft Furnaces, 2; Burk Furnaces, 4; Ohio National steam jet, 19; Steam jets of various kinds, 62; Talbot's steam jet, 10; Manhattan steam jet, 3; Checker system under boiler, 6; Pocahontas Coal, 24; Coke, 6; Electricity, 2; Stacks raised, 2; number of days in Health Office, 30½; number of days in Plumbing Inspector's Office, 53; arrests, 3; they are now pending in Police Court.

Respectfully submitted,

JAMES M'LAREN,

Smoke Inspector.

Report of Plumbing and Sewer Inspector.

Dr. J. L. Hess, Health Officer :

DEAR SIR:—As Inspector of Plumbing and Sewers, I have the honor to submit to you my annual report for the year ending December 31, 1897.

In the past year we have issued five thousand four hundred and thirty-nine (5,439) permits for plumbing and sewerage. Of that number two thousand eight hundred and ninety-three (2,893) were for plumbing; two thousand one hundred and nine (2,109) were for sewerage; four hundred and thirty-seven (437) were for extensions and repairs.

Final inspections have been made upon nine hundred and sixty-six (966) plumbing jobs in new houses and upon one thousand three hundred and thirty-two (1,332) plumbing jobs in old houses, making a total inspection of two thousand two hundred and ninety-eight (2,298) plumbing jobs; also final inspections of two thousand six hundred and seventy six (2,676) water closets which have been placed upon premises.

Final inspections have been made upon two thousand one hundred and seventy-nine (2,179) sewer jobs, nine hundred and fifty-one (951) being in new houses, one thousand two hundred and twenty-eight (1,228) in old houses.

During the past year we have made four thousand eight hundred and thirty-six (4,836) inspection visits of plumbing and two thousand four hundred and forty-four (2,444) on sewerage, making a total of seven thousand two hundred and eighty (7,280) inspection visits.

We have found three hundred and twenty-two (322) defective plumbing jobs and one hundred and seventeen (117) defective

sewer jobs, making a total of four hundred and thirty-nine (439) defective jobs found by our inspector.

I found it necessary to have delivered to the plumbers and sewer builders of the city sixty-nine (69) notices, notifying them of defective work and other matters in regard to the trade.

Eight hundred and three (803) special examinations of plumbing and house drainage were made by the request of yourself and interested persons. In many cases alterations and repairs have been made as the result of these inspections, great care and time being required to make these inspections.

Thanking you for the interest you have taken in our department, I remain,

Very respectfully,

BERT ROBINSON,
Inspector of Plumbing and Sewers.

Report of Food Inspector.

Dr. J. L. Hess, Health Officer:

DEAR SIR :—I have the honor to submit, for your consideration, the annual report of this office, for the fiscal year ending December 31st, 1897.

During the year just past, considerable time and money have been spent, in order to put the laboratory in proper shape, for the work which we are called upon to do. The room in which the laboratory is situated has been thoroughly renovated, painted and cleaned, its arrangement changed to better facilitate the work, new apparatus has been obtained, and many improvements made in different ways. All things now being in proper shape for the coming year, and we hope to be able to make an excellent showing of the work done by this office.

There is no doubt but that we are in need of many things in the line of chemicals and apparatus, which would add to the efficiency of our work, but as our appropriation is small, (five hundred dollars), we can only hope to add a little at a time, as most of the money is needed for the current expenses of the laboratory.

The Health Division has been very kind in aiding us in many ways to make this branch of its work what it ought to be, and we feel that more than usual interest has been shown in our work, both by that Division and by those associated with myself in the laboratory.

I wish to make special mention of the good work done and interest shown in that work, by Mr. T. B. Schultze, my assistant, and of the constant care and attention given at all times to the laboratory and his work therein by Mr. J. J. Grayell.

The work has been carried along different lines than heretofore, from the fact we have not only looked after the purity of the food from a chemical standpoint, but have visited and inspected many places where food is prepared, stored and sold, in order to see that proper sanitary conditions existed, and that proper care was exercised at all times to insure healthful and clean food, this being to my mind of equal importance to that of adulteration.

Great care has been taken that all analyses made should be accurate, the methods used being for the most part those employed by the U. S. Department of Agriculture, Division of Chemistry. The records of all work done are kept on file, with analysis, number, date, and from whom obtained, by whom sold, address of both parties, the reason of complaint and the results obtained.

MILK.

There are one thousand seven hundred and forty-three (1,743) licensed milk dealers in the City of Cleveland, this number including wagons, stores and milk depots, the sale of milk being governed by State Laws, passed and taking effect on April 10th, 1889, amended June 30th, 1891, (O. L. Vol. 86, Page 229), and also by City Ordinances, (Sec. 550-555).

No person is allowed to sell milk, whether the sale is to take place from wagon or store, unless he or she has a permit, said permit being issued by the Health Division. A record of all permits issued is kept by that Division, great care being taken to see that no one is allowed to sell milk unless they have a permit. All wagons must be numbered and the owner's name placed thereon, and any can containing milk from which the cream or any part thereof has been taken, must be marked in uncondensed gothic letters, not less than one (1) inch in length, "skimmed milk."

During the past year five thousand four hundred and thirty-eight (5,438) samples have been collected, and although this number is not large, nor nearly so many as ought to be taken in a city as large as Cleveland, yet when it is taken into consideration that this number has been taken by one man, and he with no other way of getting to different points in the city except the street cars or walking, it is not a bad showing.

The samples are collected in half-pint bottles, each numbered, and the name and address of the dealer are taken, also the name and address of the producer. The samples are then brought to the laboratory and an analysis made, the analyst not knowing from whom the milk was obtained, being governed only by the analysis number. After the analysis is made, all samples found below the standard, the "standard" being as provided by the State Law, passed and amended as given in the sections above, that is that milk is not to contain more than 88 % of watery fluid, or to contain less than 12 % solids, nor (not) less than $\frac{1}{4}$ of which must be fat, except during the months of May and June, when milk containing less than $11\frac{1}{2}$ % of milk solids shall be deemed to be not of a good quality, are noted and notices sent to the milkman from whom the milk was obtained, asking him to call at this office, and warning him of having such milk in his possession; upon calling he is told which of his samples was found to be below the standard, the name of the producer, the requirements of the law, and also that if any milk upon his wagon is found in like condition again, that he will be liable to prosecution. Most of the milkmen have shown a desire to sell only the best milk, and for the most part have done their best to conform to the law, and have shown an interest in the work we are doing in this line. The samples of milk are taken before the milkmen start out on their routes, that is they are taken either as they come into the city limits, or at the depots as the cans are taken from the trains. No dealer can tell when or where the samples are to be taken, so that no chance is given to make the milk any better at one time than another; and we thus know the true condition of the milk at all times. The cans and wagons are thoroughly inspected to see that they are in proper condition, that dippers are used, and that the milk is thoroughly stirred before dipping, in order that the last customers may obtain just as good milk as the first.

Very little, if any, coloring matter or preservative is used by any of the milk dealers of this city. The greatest evil we have to contend with being the removal of part of the cream. This may be done by the farmer before sending the milk, by the train men while the milk is en route, or by the milkman, the latter being held responsible for the same. We have done and are doing

our best to stop this practice, and have met with success in a remarkable degree, as is shown by comparison with last year's report.

Although the percentage of milks given in the table following, as below the standard may seem high, yet it must be remembered that the number given includes all those which did not conform to the State law in every particular, and be that deficiency ever so small it has been given in this number. There is no doubt but that the greatest source of danger, as far as disease is concerned, arising from the use of milk, lies in the dairy. The milk brought into this city is brought from a large and wide-spread territory, and from a large number of dairies. To visit all these, look into their sanitary condition as to stables, yards, how and where the milk is kept, the condition of the cans and health of the cattle, would require one man's constant attention and time, a large amount of travel and great expense; but there is no doubt but that it ought to be done, for any chemical analysis, be it ever so careful and complete, will not show many points which, to my mind, are of far greater importance than the amount of fat and total solids.

It is a well-known fact that there is no food so liable to take up odors and disease germs as milk, and where we find filth we are liable to find both of these. There is then much need that some work should be done to ascertain the condition of the dairies sending milk into our city. Should this line of work be taken up, then if the dairies are not found in good condition, they can be prohibited from sending their milk into the city, until all things about the same are in proper condition.

About one-seventh of the milk sold in the city is put up in bottles, also a large amount of cream, this method being considered to be far superior to that of the can and dipper.

We have a pasteurized milk company, who have had a liberal patronage, and have given entire satisfaction. A visit was made to the plant, and everything found to be in prime condition, with every care taken as to cleanliness, the place having cement floors and hot and cold water attachments.

The number of samples of milk brought into the laboratory for examination, on account of various complaints, has been sixty-two (62), and where any of these samples have been found

to be below the standard, or to contain any foreign substance, the matter has been fully investigated and proper steps taken to punish the offender.

In this connection it should be said that Sanitary Patrolman Whitman deserves a large amount of praise for his faithfulness in collecting all the milk samples during the past year, and for his untiring efforts in this line, as well as for his interest in all other work in and about the office.

The following table, given below, shows the number of samples collected each month during the year, the number of these which were below the standard, the number of adulterations in that number, the average specific gravity, fats and solids, for each month, also the numbers and percentages for the year.

MONTH.	Sam- ples.	Low.	% Low.	Adult- erated.	% Adult- erated.	Average Sp. Gr.	Average Fat.	Average Total Solids.

During the month of July no samples were taken, owing to the fact that the "Babcock Tester" was broken, and a new one had to be made.

MILK DEPOTS.

During the year four hundred and thirteen (413) visits have been made to milk depots, attention having been given to the condition of the rooms, the vats in which the milk was kept, the cans and utensils used in and about the milk, in fact, all points that pertained to the sanitary condition of the place, and the proper handling of the milk. Samples of the milk for analysis were also taken from the cans in the depot at the time of calling, and where any objectionable or unsanitary conditions were found to exist in or about the depot, an order was left with the proprietor to attend to the same; a reasonable length of time being given for its correction, after the time had elapsed, a second visit was made to see that all things had been put in proper and sanitary condition. At this time the milk depots are all in better shape than at the beginning of the year, and they will receive our constant attention.

A number of stores also sell milk; of these one hundred and fifty-seven (157) have been inspected, in the same manner as the milk depots, and samples of milk taken from each.

BUTTER.

Many complaints have been made in this regard, and most of them with reason, for large amounts of oleomargarine, or mixtures of oleomargarine and butter, have been sold for pure butter in stores, at the markets and from wagons. The State Law is very strict in this matter, and a number of prosecutions have been made by the State during the past year. All samples brought into this office have been given a thorough chemical analysis, and where adulterations have been found, or oleomargarine has been sold for butter, we have done our best to make a case against the dealer, but in this we have failed many times, either because the parties bringing in the sample did not wish to carry the case into court, or because the chain of evidence was lacking in some point.

We have also found that unclean and rancid butter gives another cause for complaint, and where the buyer has paid a reasonable price and bought it for good, wholesome butter, we have

gone to the dealer and explained the matter to him and asked him to make the matter right with his customer, and in nearly all cases satisfactory arrangements have been made.

MEAT AND FISH MARKETS.

Many of the meat and fish markets of the City have received our attention; in these the "coolers" were given special attention as to their construction, ventilation and cleanliness, relative position of the meat and the ice, and the condition of the meat therein, the location of scrap barrels, the condition of drains and sewers in and about the place, to see if they were in working order; and, where the existing conditions necessary to health were not found, an order was left for its immediate remedy.

GROCERIES.

Many stores were visited, in order that we might learn their condition, the manner in which the goods were stored, and in what way they disposed of their refuse. Samples of various kinds were taken, more particularly sugars, white and brown. The samples were brought to the laboratory and analyses made. Much agitation has been raised along this line during the past year by the State Food Commissioner. We have found no sugars that contained any deleterious matter of any kind, or any adulteration; some were slightly blued with ultramarine, but, as this is perfectly harmless, and the quantity so very small that it could not be called an adulteration, nothing was done in the way of prosecutions by the Department.

ICE CREAM MANUFACTORIES.

All the factories where ice cream is made were visited, the surroundings of the building and room in which the ice cream was made were given a thorough examination, the cooler in which the milk and cream were kept before being made up, the cans in which the cream was made, the ice used and where obtained, these points were all noted. Where unsanitary conditions existed as to place or manner of handling the ice cream, an order to correct same was given, and a second visit made to see that the order had been carried out.

Samples of all coloring matters used in the coloring of the ice cream were taken and submitted to an analysis, to ascertain if any ingredient was used that was detrimental to health; found that in one color used in making strawberry ice cream, and being carmen red, that large amounts of ammonia were present; this was used by five manufacturers. An order was sent to each to stop its use at once, and we have had no further trouble from this source.

Most of the places were found in good shape, care being taken to make the best article and observe cleanliness, as well as to have the room and surroundings in a sanitary condition.

SODA FOUNTAINS.

The soda fountain of the past has been a menace to public health. Fruit juices and some syrups contain free acids. These were placed in metallic cups within the fountain, the acid acting upon the metal, producing poisonous compounds. Of course, the consumer got very small quantities of this poison at a time, but continued use of the same might cause serious results. Moreover, various preservatives, such as salicylic, tartaric and boracic acids have been and are used in preserving the syrups and fruit juices. At the time the inspection was made, very few fountains had the metal in contact with the syrups, as the cups were porcelain lined, and most of the fruit juices were kept on the counter in glass or porcelain dishes. Samples of all the syrups and fruit juices were taken and analyzed for preservatives and colorings of an injurious nature; of these only three were found to contain anything injurious, or against the law, that being salicylic acid, it being used as a preservative. Notices were sent to those using it, and no more was used the remainder of the season, so far as we were able to ascertain.

RESTAURANTS.

All the restaurants in the central part of the city and many of those located in other parts have been inspected; particular attention having been given to the kitchens, as to how the cooking was done, the materials used, the location of the ice boxes

and the care taken of them, also the cleanliness of all utensils used, the location of the drains and sewers, and of the garbage barrels, and how often emptied. Suggestions were made to the proprietors in the way of bettering the condition of their places. A second visit was made in a reasonable length of time to see that our suggestions had been carried out, and in case they had not been, an order was sent them to attend to the matter at once. At this time we find the restaurants in our city to be in excellent condition.

ICE AND ICE PONDS.

There are twenty-three (23) ice ponds in and outside the city limits, from which ice was cut and sold in the city for domestic or cooling purposes during the past winter. These have all been inspected. The source of each stream running into the ponds has been the starting point of investigation. All sources of contamination along these streams and around the ponds, such as the surrounding territory from which the surface water was drained, all sewers, out-houses, slaughter-houses, barns, private drains, etc., were noted; and sketches and complete reports of these ponds will be found on file in this office. The majority of these ponds are in very poor condition, being nothing more or less than cess-pools, receiving the surface water from thickly populated districts, and the sewerage as well. Moreover, many of them are merely mud holes in the summer time, with barns, slaughter-houses and private houses upon their banks, receiving constantly the filth from these; and in the Fall of the year they are dammed up to await the heavy rains; thus when the rains do come they are filled with the surface washings of the surrounding country, and receive as well the pollution from the other sources. There is no doubt but that the cutting of ice from any pond within the City Limits, for any purpose whatsoever, should be prohibited, as there is not one of them from which good water could be obtained at any time during the year. Skating is also permitted upon the ponds, and it is easy to see that this is another source of the spreading of disease, and that more filth is thus added to the ice.

During the last winter ice was cut from the lake, inside the breakwater. We have analyzed various samples of water and ice coming from different points on the lake front, and found it to be foul in the extreme, and shall endeavor to prohibit all persons from cutting ice from there for any purpose.

According to section 555-561 of the City Ordinances, ice has been cut from these ponds and within the breakwater for "cooling purposes only," and all persons having this ice for sale were to mark their wagons with the words, "Ice for cooling purposes only." In many cases this was done, but many did not so do, and, even though we might feel sure that they were selling this ice for domestic purposes, yet it was almost impossible to prove that such was the case, they saying that the ice came from some lake outside of the City, and to watch them the whole season through is impossible.

Ice sold for cooling purposes is often misused by persons buying the same, they not knowing the danger therein, and even though the food may not come in direct contact with the ice, yet the danger is not wholly obviated, as the refrigerators are kept tightly closed, and foul odors, arising from the ice therein, are taken up by the food, particularly, milk, butter and meat.

We have done our best to make comprehensive and complete reports upon the condition and surroundings of all these ponds, and hope that some decisive action may be taken to stop the cutting of ice from these ponds for any purpose.

FILTERS.

An extended examination as to the efficiency of various filters submitted to the Board of Education for supplying filtered water to the schools of this City was undertaken by the Health Department. This work was carried out in this office, and the following points were taken into consideration: the purity of the water supplied, from a chemical and bacteriological standpoint; the amount of water supplied in a given length of time, method of cleaning filter, its operation and construction. All filters were given careful tests as to these points, and a report made out for the purpose given above. Some of the filters tested were found to be almost worthless, from the fact that, although the water

after passing through the filter was cleared of a large proportion of the suspended organic matter and sand, yet the harmful properties of the water, organic, inorganic matter and germs had remained in the water. Most of the filters submitted were those depending upon the passing of the water through sand, rock or porcelain tubes. If these tubes were very open, that is, if the pores were large, the water could pass through very easily, and thus only the larger particles of suspended matter were removed, and were carried by the force of the water far into the tube, where no amount of washing could cleanse the tube properly; putrefaction soon took place, making such a filter worse than none at all. The efficiency of a filter depends upon the density of the tube, for although the water passes through slowly, yet, if dense enough, it will remove all harmful matter and germs from the water.

Another point, worthy of consideration in this connection, is the cleansing of a filter; if this is attended with a large amount of labor, it will be neglected, and any filter ought to be cleaned every day to keep it in a sanitary condition. Upon the surface of the tube, or in the filter, if a tube is not used in the filter, collects all the objectionable matter taken from the water; all water then passing through the filter must come in contact with this, and the danger is made greater, rather than lessened, as this soon becomes the breeding ground for germs. As the care of the filters for the schools must of a necessity be left to the janitors, the point of cleaning the filter was one of great importance, for, if it was easily and quickly done, it stood to reason that it would be attended to more as it ought.

Nothing has been done, so far as we are able to learn, in the way of selecting any particular filter for the use of the public schools.

Some of the work done by this Department during the past year has been given above in detail. While many other subjects have been given attention, they have not had special mention, as they are of minor importance, and only such as come in the usual course of work done by such a laboratory.

The following table will give an idea of the amount of chemical work done in the laboratory, and of the variety of work we are called upon to do. In this table will be found the names of the different articles, the number of same, the number of determinations for each, with the totals for each, and for the entire year :

	Number of Samples.	Number of Determinations.	Total Number of Determinations.

DEPARTMENT
OF
FIRE SERVICE.

Report of the Director of Fire Service.

CITY OF CLEVELAND, OHIO, January 1st, 1898.

TO THE HON. ROBERT E. MCKISSON,

Mayor of Cleveland, Ohio.

DEAR SIR:—In submitting to you the report of the Department of Fire for the year ending December 31st, 1897, containing the report of the Chief, Secretary, Superintendent of Machinery, Chief Operator, Boiler and Building Inspectors, Examiner of Engineers, City Electrician, Medical Officer, Department Veterinary and Fire Wardens, it will be useless for me to add anything more than what is contained in these reports.

The Secretary's report exhibits the resources and disbursements, the alarms and causes, the losses and insurance.

The Chief reports the condition and requirements, the establishing of new companies and the time of going into service, compares the loss of previous years, makes a summary statement of fires attended, miles run, fires worked at, hose used, hours worked, etc., making valuable suggestions as to future improvements.

The Superintendent of Machinery's report shows the condition of apparatus, additions made thereto, description of each engine and some recommendations.

The Medical Officer reports the diseases and injuries and the general health.

The Chief Operator, Building Inspector, Boiler Inspector, Examiner of Engineers and Electrician each give detailed statements of the condition of the respective branches of the department over which they have charge.

No new companies have been organized since the last report, but during the year a new engine house has been started and is now almost completed, and a new company will be placed therein as soon as practicable.

In conclusion I wish to state that the past year has been a very successful one, both financially and in efficiency of the work accomplished, and I desire to express my full appreciation of the Chief, his assistants and the members of the force to perform the various duties assigned them. Their united efforts have sustained the reputation of this department and placed it in the front rank.

I desire also to thank the Police Department for the many courtesies extended in aiding this department at fires.

Very respectfully submitted,

G. L. HECHLER,
Director of Fire Service.

Report of the Secretary.

DEPARTMENT OF FIRE,
OFFICE OF THE SECRETARY,
January 1, 1898.

HON. G. L. HECHLER,
Director of Fire Service.

SIR :—I herewith submit my report for the year 1897.

Very respectfully,
A. J. SPENCER,
Secretary.

LIST OF CASUALTIES IN 1897.

January 12th.—Fire in the Campbell Block, Mrs. Francis Paynent, in descending in the fire escape had two of her fingers crushed.

January 29th.—Fire at 78 Barber avenue, Julius Spang, four horses burned to death.

February 3d.—Fire at 181 McHenry street, Mrs. Sandman burned on arms and face.

February 19th.—Fire at 663 Canal street, Mrs. Jacob Chelitz and three children were badly burned, John Chelitz, Agnes and Victoria Chelitz were burned so badly that they died from their injuries received.

March 3d.—Fire at 176 Quincy, John J. Oole upset a lamp and was burned slightly.

March 19th.—Fire at the 153 Seneca street, Mr. Drake was burned on hands and face.

March 22nd.—Fire at 191 Croton street, James Gottfried was burned on hands and face.

March 30th.—An accident occurred at 317 Huron street, Charles Davidson was killed.

April 1st.—Fire at 93 Croton street, Miss Bartara Herring in pouring coal oil in a stove was burned so that she died the following day.

April 3d.—Fire 144 Orange, Albert Schill burned on hands.

April 6th.—Fire at 135 Franklin avenue, two sisters, Mrs. H. Vannister and Mrs. W. Thompson were burned so badly that both died from the effects of the injuries.

April 20th.—Fire at 140 Prospect street, Miss Sarah Anderson was burned to death.

April 26th.—Fire at 170 Liberty street, Mrs. Gillson burned on her hands.

April 29th.—Fire at 72 Pittsburgh street, one horse burned to death.

May 10th.—Fire at 198 Wason, Mrs. V. Benner burned badly on hands and face.

May 11th.—Fire at 262 Scovill avenue, Mrs. James Cassidy burned slightly.

LIST OF CASUALTIES IN 1897.—Continued.

May 25th.—Fire at 18 Brooker avenue, Mrs. A. Kortinck and J. Pesta burned on hands.

June 5th.—Fire at 129 Erie street, lamp exploded and Mrs. Anna Smith was burned so badly that she died soon after in the hospital.

June 15th.—Fire at 169 Chestnut street, Mrs. Hart burned on hands and face.

July 4th.—At a fire on Wason street machine shop Capt. Chas. Knapp injured.

July 5th.—Fire at 1777 Superior, a barn struck by lightning and two horses were burned to death.

July 9th.—Fire at 17½ Lees' court, Mrs. Rosenberg burned quite badly.

July 13th.—Fire at 13 Mayflower street, Mr. Fennell burned on hands.

July 17th.—Fire at 391 Hamilton street, Henry McElenhany burned on hands.

August 2nd.—Fire at 1607 Detroit street, Miss Lena Schroeder, burned her hands and face; fire at 65 Church street, Mary Lucy Gordon burned her hands.

August 11th.—Fire at 29 Detroit street, Miss Annie Kelley severely burned.

August 15th.—While working on a fire at 314 Starkweather avenue, Capt. W. A. Reynolds fell dead.

August 31st.—Fire at 86, J. Bundy and Joseph Bostra were badly injured by falling wall.

September 3d.—Fire at 2553 Broadway, Capt. W. H. Ney broke his arm, Capt. Mulcahy was burned on his ankle, Patrick Ruddy cut his wrist badly and Louis Vance injured on his knee.

September 16th.—Fire at Turney avenue, John Flynn injured his foot; A boy, E. Ruffe, was caught in an elevator at 71 Ontario street and the firemen were obliged to saw the bottom out to relieve him. He was taken to the hospital.

September 18th.—An alarm from box 427 called out Hook and Ladder Company No. 4, and when crossing the track at Aetna street a passenger train demolished the truck, and Capt. Grant Gairns, Fireman Thomas Ax-ford, Fireman Michael Falvey and James Nesbitt were injured, also the flagman, James Cullen.

October 16th.—Fire at 21 Lasalle street caused by children playing with matches, little Earl Lovejoy, 3 years old, was burned to death.

LIST OF CASUALTIES IN 1897.—Concluded.

November 6th.—J. C. Rester's dwelling caught fire by upsetting a lamp at 2 Viola street, and Mr. Rester burned his hands and face.

November 21st.—Fire at 1213 Central avenue, Richard White slightly burned; the floor in the M. E. Church on Forest street fell in and Emma Carter was severely injured, Mary Artes and Isabella Smalle were slightly injured.

November 25th.—While responding to an alarm from Box 342, horse No. 168 dropped dead.

December 23d.—At 5:23 p. m. a fire broke out in the Power Block on Frankfort street, which proved to be the most disastrous fire during the year. At this fire Lieut. Wm. B. MacFeeters of Engine Company No. 1, fell down an elevator shaft from the fourth story. He was taken to the hospital where he died soon after his arrival there.

Report of Chief.

CLEVELAND, OHIO, January 1, 1898.

HON. G. L. HECHLER,

Director of Fire Service.

DEAR SIR:—I have the honor to submit to you my seventeenth annual report, comprising the work and condition of the Cleveland Fire Department for the year ending December 31, 1897.

During the past year the Department responded to 1,100 alarms, which is 100 more than the year previous.

Of these 793 were box alarms and 307 were still alarms. There were 462 working fires, which was 61 more than in 1896. Of this number there were 21 calls for assistance and 14 false alarms.

The loss by fire during the past year was \$573,054.26, divided as follows: On buildings, \$278,978.21; on contents, \$294,076.05.

The Department at present consists of 377 officers and men, 148 horses and 119 pieces of apparatus, which comprises 25 engine companies, 9 hook and ladder companies, 3 chemical engines, 1 hose company, 1 water tower and 1 aerial Scott Uda ladder, engine companies 15 and 21 being fire boats.

The Department has at the present time 42,555 feet of fire hose of different sizes. Just here I would like to call your attention to the necessity of extending the pipe lines for the fire boats, and advisability of placing a large two-horse wagon for the purpose of carrying 3½-inch hose and other necessities needed for the fire boat pipe lines.

To the telegraph department I would call special attention, and I would also recommend a change in making calls for assistance at fires, and to the replacing of some of the older engines with new and lighter ones.

The discipline of the Department is good. The state law regulating the Department should be changed to conform with the Department. We now have a chief, an assistant chief and battalion chiefs, while the state law provides for a chief and assistant chiefs, but no battalion chiefs.

The salaries ought to be equalized to conform more with the duties performed.

I would state here that Secretary Spencer is entitled to an assistant, and that in most departments the chief is allowed a clerk, and an assistant could fill both positions.

The Benefit Associations of the Fire Department are in good condition. The Firemen's Life Insurance paid out \$7,585.00 death loss and \$17.50 running expenses. The Relief Association paid out in sick claims \$2,352.00, death claims \$400.00, and other claims, the total amounting to \$2,874.99. There is a cash balance to its credit in the bank amounting to \$5,477.92.

The Pension Fund has now on its roll thirty-two old and disabled firemen, twenty-five widows and thirty-one children. In taking care of these the Board expended \$26,480.59 during the past year.

The untimely death of Lieutenant William MacFeeters, due to an accident at the Power Block fire on the night of December 23, 1897, I mention with regret.

Before closing I wish to thank you for your action and interest manifested in all matters pertaining to the good of the Department.

I also wish to thank the papers for the praise of the Department, and the Old Firemen and citizens for their timely help and encouragement at fires; also the officers and men for their zeal and earnestness manifested at all times, and the Police Department for their invaluable aid at fires, as it never has been more efficient.

Respectfully submitted,

J. W. DICKINSON,

Chief Cleveland Fire Department.

Report of Superintendent of Machinery.

CLEVELAND, OHIO, December 31st, 1897.

HON. G. L. HECHLER,

Director of Fire Service.

DEAR SIR:—I respectfully submit herewith my annual report of machinery and apparatus of the Fire Department for the year ending December 31st, 1897.

APPARATUS.

The apparatus of the Department is in excellent condition, attention having been paid to keep this arm of the service in the highest standard of efficiency, repairs having been made when necessary from time to time to insure the efficiency of the machinery.

The casualties were few. The most serious one was that which hook and ladder truck No. 4 met with on September 18th by being run into by the fast mail train of the Erie Railway Co., on the Ætna street crossing of that road, demolishing the truck and breaking all the ladders, severely injuring several members of the company at the time.

The truck has been rebuilt and is practically new, with very few exceptions. The ladders, having been rendered useless, were replaced by a new set.

The apparatus purchased newly were one fourth size double piston steam engine, placed in service at Fire Station No. 24, built by Thos. Manning. It was placed in service May 4th.

A new exercising wagon was purchased for Engine Co. No. 5. The old one was worn out; it was taken in part pay for the new wagon.

There was one light Concord wagon purchased for use of the telegraph department, to be used in looking after trouble on the line, or such other light work as is needed.

Five buggies (officers') received general repairs and painting, three of them receiving new wheels.

Hose wagon No. 8 received a general overhauling and painting, which put it in first class order.

RECOMMENDATIONS.

Would respectfully recommend that one new chief's buggy be purchased and one now in use be used as a reserve one. There is only one now for that purpose, which is not enough, as it sometimes requires the sending of two, and at times three, to shop for repairs. And in the event of purchasing a new buggy I would suggest that it be equipped with rubber tire and roller bearings. They will materially lessen the cost of repairs in the future.

Rebuilding of the old hook and ladder truck now used as an extra. In its present condition it is not adequate to fill the requirements of what a hook and ladder truck should be.

A light engine of the fourth size, to be used as an extra in the outlying districts, as those in reserve at present are too heavy to be used when off paved streets. It would be an impossibility for a team of horses to haul them in some of the roads in those districts on account of the great weight of engines.

Some of the engines and hose wagons in the Department will need painting when the winter is over, they being much in need of it to put them in a presentable appearance.

The machinery of the Department has worked well on the several calls made upon it during the year past, the severest test being the one at the Perkins Power Block on the night of December 23d. During the progress of that fire each of the fifteen steam fire engines and the two fire boats engaged did splendid service to the end without interruption. The value of the pipe system from the fire boat stations was fully demonstrated at that fire. The streams of water delivered on the fire were very large and of tremendous force.

The casualties to apparatus were slight. Hook and ladder No. 1 was slightly damaged by a falling wall. A running board on one side was broken; one extension ladder was broken also. Engine No. 8 had a slight disarrangement of the exhaust occur. Repairs were immediately made and it was reported for duty in a short space of time. Fire boat (John H. Farley) reported the breaking of crosshead bolts in one of the pump engines. This break was also immediately repaired, having extra bolts on hand for such emergency.

A new pair of steamer wheels were purchased to replace the ones burned at Station 16. They are to be used as extras for the Manning third size engines.

HEATERS.

There are 24 heaters attached to fire engines, 2 heaters used for heating water for house use only, 10 steam house heaters, all of which are in good order except the one at Station No. 3, which will require to be replaced by a new one.

EXTRA PARTS.

Provisions have been made to have extra parts of apparatus stored, ready for immediate use, such as wheels, poles, whiffletrees, eveners, grates, suction, and several smaller parts to be used when needed.

APPARATUS IN SERVICE.

The following is a list of the apparatus of all classes now in service and in first class condition: Consisting of 16 double piston engines, 2 single piston engines, 6 rotary engines, 2 fire boats with powerful vertical duplex pumps, 25 hose wagons, 9 hook and ladder trucks (three of which are of the aerial turntable style), 1 aerial ladder (Scott Uda), rope windlass hoist, 1 water tower, 10 buggies (officers'), 3 two-wheeled chemical engines, 2 linemen's wagons, 1 telegraph pole cart, 2 coal wagons with capacity for $3\frac{1}{2}$ tons each, 2 general delivery wagons, 23 exercising wagons.

RESERVE APPARATUS.

The following apparatus is in reserve: Two steam fire engines in fair condition, 2 hose wagons in good condition, 1 four-wheeled hose carriage in fair order, 1 hook and ladder truck in bad condition, 1 chief's buggy, fair.

IN BAD ORDER.

One steam fire engine (formerly used at Station No. 11), 1 two-wheeled gig, 1 old fire wagon, 1 lot of old fire ladders which are not considered safe for future use. Would recommend that this lot of miscellaneous old stuff be condemned and sold, as it is of no further use for service.

Report of the Chief Operator of the Cleveland Fire Alarm Telegraph.

FIRE ALARM OFFICE, January 1st, 1898.

HON. G. L. HECHLER,

Director of Fire Service,

SIR:—I have the honor to submit to you my annual report for the year ending December 31st, 1897.

During the past year the Fire Alarm System has worked very well, considering there are 82 old Allen alarm boxes in circuit. Whenever there was delay in receiving a proper alarm it would be from an Allen box; they cannot be counted on with any degree of safety and should be replaced as soon as possible with new sector weight boxes.

During the past year 830 feet of cable was laid underground on Wood street, from St. Clair street to and in the City Hall. This cable took the place of overhead wires between said points, and said overhead wires and poles have been removed.

During the past year $10\frac{1}{4}$ miles of copper wire was strung in renewing and extending our circuits to take in additional boxes, of which there were 4 added to the system; and all poles having fire alarm boxes attached thereto were given a coat of red paint.

There are places in our circuits where the poles and wire are old and in bad shape, and should be replaced with new poles and wire. I shall submit, later on, a detailed statement of what is required in that line, with estimated cost thereof.

In the line of additions and improvements to the Fire Alarm System I respectfully refer to my communication dated Decem-

ber 31st, 1897, which gives details and estimated cost. There is one change in said paper which I respectfully recommend. In place of additional talking line I would build four alarm circuits, placing thereon the polarized relays that work the registers and gongs; by doing this each engine house would have two (2) circuits to receive alarms.

In conclusion I beg leave to extend my sincere thanks to the Honorable Director of Fire Service and to the Chief for kindness and assistance rendered.

See annexed table for detailed statements, etc.

Respectfully submitted,

JOSEPH ROTHGERY,

Chief Operator.

Respectfully forwarded to Chief J. W. Dickinson.

Report of the Medical Officer.

OFFICE OF THE MEDICAL OFFICER, }
January 1st, 1898. }

HON. G. L. HECHLER,

Director of Fire Service.

DEAR SIR:—I have the honor to submit to you a report of the medical services for the year ending December 31st, 1897, and with it desire to make the following recommendations:

Much sickness results from exposure, and many times from unnecessary exposure. I am told by firemen that in responding to night alarms sufficient time is not given them to dress; that they frequently ride to fires their only clothing that of a shirt and trousers. This is inhuman and should be rectified at once. They should be well clothed at night to meet the severe and extreme exposure to which no other body of public servants are subjected, and to this their Captains should give attention.

Each fire station should be provided with a supply of modern medical and surgical dressings and facilities for properly caring for injuries. I am frequently called to dress wounds that should receive particular attention—where cleanliness should be observed in every detail—and there find only a horse bucket in which to wash a wound.

Appended you will find tables showing medical services.

In conclusion I desire to return my sincere thanks for the very kind treatment which has been accorded me.

Respectfully forwarded through the Chief, James W. Dickinson.

D. L. TRAVIS,
Medical Officer, C. F. D.

Approved and forwarded to Director G. L. Hechler.

J. W. DICKINSON,
Chief, C. F. D.

CLEVELAND, January 1, 1898.

JAMES W. DICKINSON, *Chief*:

SIR:—I respectfully submit the following report of Hose for the year 1897:

Amount of hose in the Department Jan. 1, 1898, 40,300 feet.

HOSE PURCHASED DURING 1897.

Of the Mechanical Rubber Co., National Knit 2½-in.	1,000 feet.
Manhattan Rubber Co., (Manhattan) 2½-in.	1,000 feet.
Revere Rubber Co., Mastiff 2½-in.	1,000 feet.
Akron Rubber Co., Goodrich 2½-in.	1,000 feet.
Eureka Fire Hose Co., Paragon 2½-in.	1,000 feet.
Fabrick Fire Hose Co., Unique 2½-in.	1,000 feet.

Total hose purchased..... 6,000 feet.

Amount of hose burst..... 4,550 feet.

Amount of hose repaired..... 1,900 feet.

Amount of hose condemned..... 3,750 feet.

Total amount of hose in Department Dec. 31, 1897. 42,550 feet.

Yours respectfully,

P. H. AUXER,

Storekeeper.

Respectfully forwarded to Director G. L. Hechler.

J. W. DICKINSON,

Chief.

Report of the Inspector of Boilers.

JANUARY 1, 1898.

HON. G. L. HECHLER,

Director of Fire Service:

DEAR SIR:—I herewith respectfully submit my Annual Report for the year beginning January 1, 1897, and ending December 31, 1897:

Number of boilers inspected.....	222
Number of certificates issued.....	222
Number of repairs ordered.....	45
Number of certificates issued to city boilers, no fee.....	59
Paid to A. J. Spencer, during the year.....	\$695
Certificates issued and unpaid.....	24

No accidents to steam boilers under the jurisdiction of this Department have occurred during the time I have been in office.

In conclusion I desire to return to you my sincere thanks for the kindness and many courtesies received at your hands.

Very respectfully,

THOMAS CALDWELL,

Boiler Inspector.

Report of the Examiner of Engineers.

JANUARY 1, 1898.

HON. G. L. HECHLER,

Director of Fire Service:

SIR:—I herewith most respectfully submit my Third Annual Report for year ending December 31, 1897:

Report of Veterinary.

HON. G. L. HECHLER,

Director of Fire Service:

DEAR SIR:—I have the honor to submit herewith my report for the year ending December 31, 1897.

The total number of cases treated in the Veterinary Hospital during the year of 1897 was 107; the total number of visits made by the Veterinarian, 796.

Only one horse has been lost, No. 168, on November 25, from heart failure; said horse dropping on the road while in response to an alarm from Box 342.

I consider the mortality phenomenally low.

After repeated trials of various rubber shoes I do not consider them practical for winter use in the City of Cleveland. If rubber shoes can be furnished at a reasonable expense I would recommend them for summer wear, as I think they would do away with a great deal of slipping and falling on slippery pavements.

The horses of the Department, as a rule, are in good shape to perform the services required of them.

We have a few that are old, having been in the service a good many years, and I would recommend their disposal during the coming year.

In closing, permit me to thank you and the other officers and members of the Fire Department for kind and courteous treatment.

Yours respectfully,

N. H. DOWNS, M.D.C.

Department Veterinary.

Report of the Inspector of Buildings.

DEPARTMENT OF FIRE,
OFFICE OF INSPECTOR OF BUILDINGS. }
January 1, 1898.

HON. G. L. HECHLER,

Director of Fire Service:

DEAR SIR:—I have the honor to herewith submit the Tenth Annual Report of the business transacted by this Department for the year ending December 31, 1897.

The estimated cost of new structures built during the past year is \$3,031,928, and for additions, alterations and repairs, \$375,875, or a total of \$3,407,803, which is \$262,202 more than for the year of 1896.

The fees charged for permits in 1897 amounted to \$5,854,30, and the expenditures for salaries, stationery, printing, etc., \$6,322.50. The fees charged for permits in 1896 amounted to \$5,459.80, and the expenditures for salaries, stationery, printing, etc., \$6,420.37. No fees were charged for the public buildings built by the city, but the cost of the same is included in the total for new structures.

Four hundred and forty-eight (448) permits have been issued for steam and hot air heaters, all of which have been inspected.

Forty-five permits have been issued to move buildings.

Notices have been served on owners of ten buildings to place fire escapes on same. The plans and specifications for fire escapes are the same as last year.

Numerous examinations of buildings reported unsafe and walls of those destroyed by fire have been made, and when found to be unsafe the owners or agents have been notified to have them made safe or taken down.

The force employed in this Department consist of the Inspector of Buildings, Assistant Inspector, and two Deputy Inspectors.

The Assistant Inspector and one Deputy are employed all the time inspecting buildings in the course of construction; all heating apparatus, unsafe buildings, defective chimneys, and locating and ordering on fire escapes.

The territory to be covered by the number employed in this office is manifestly too large—thirty-two square miles.

I would respectfully suggest that at least two additional inspectors be provided for, and would add that from the present outlook in the building trades the fees will be large enough to warrant the payment of the salaries therefrom, and keep this office self-sustaining or nearly so, as it has been in the past.

In closing permit me to thank the officers and members of the Police and Fire Departments for their help; and the Assistant Inspectors for the faithful discharge of their duties.

Yours very respectfully,

JOHN E. THOMAS,

Inspector of Buildings.

THE ACCOMPANYING TABLES GIVE IN DETAIL THE
BUSINESS DONE DURING THE YEAR 1897.

The following is a condensed summary thereof:

Number of brick and stone structures	142
Number of wood and frame structures	1,693
Number of additions, alterations, etc	1,176
Number of buildings moved.....	45
Number of heating apparatus.....	448
Number of fire escapes ordered.....	10
Total amount of fees charged.....	\$5,854 30

STATEMENT

Showing the whole number and estimated value of all buildings in the city January 1, 1897 ; with the number and estimated cost of structures during the year 1897.

Report of the City Electrician.

JANUARY 1, 1898.

HON. G. L. HECHLER,

Director of Fire Service:

DEAR SIR:—The following report for the year ending December 31, 1897, is very respectfully submitted.

Number of permits issued	650
Number of inspections made.....	1,128
Number of poles removed	101
Feet of aerial wire removed.....	1,087,780
Feet of sub-way built	42,988
Feet of ducts placed underground.....	324,723
Feet of cable placed underground	117,759
Feet of conductors placed underground	16,250,637

Or $3,077\frac{77}{100}$ miles. The total amount of wire underground within the city is $12,314\frac{41}{100}$ miles.

Number of tests made on railway conductors to determine if conditions exist which may cause electrolysis, 943.

The frequent measurements of electrical energy furnished to street lamps has at all times shown it above that called for in the specifications. The average for the year being $91\frac{57}{100}\%$. Many improvements have been made in the details of wiring on the streets and in buildings for the better protection of life and property. The total known fire loss within the past year caused by defective wiring was less than five dollars, and there has been no serious accidents to persons.

Notwithstanding the above record, careful inspections often bring to notice conditions which would cause serious results if not remedied. New construction work needs careful inspection, and the older installation require considerable attention also, as

they deteriorate, to a dangerous extent, if not properly cared for. The rapid adoption of the use of electrical devices and appliances constantly increase the work of this Department although improved methods suggested by experience facilitates the work to some extent. The question of the electrolitic action of currents of electricity on pipes in the streets has repeatedly been called to the notice of the writer; while the railway companies have expended many thousands of dollars in the prosecution of work which will tend greatly to prevent their currents from having an injurious effect on the pipes and the armor of underground cables there probably are existing conditions which will require still more work to be done to properly protect the property of the city from the deteriorating effects of electrolysis. I most earnestly recommend that the necessary appliance be purchased to enable the writer to make a complete survey which is the only means of arriving at correct conclusions and deciding on the most efficient methods of preventing what may be results greatly to be regretted. The aerial wires in the underground district have nearly all been removed, and I respectfully recommend that the Ordinance be enforced regarding the few remaining. In conclusion I desire to express my thanks for the courteous and kindly treatment received from you and to the Chief and the Assistant Chiefs for their aid and encouragement in the discharge of the duties which have devolved on the writer.

Very respectfully,

GEO. M. HOAG,
City Electrician.

Report of Fire Wardens.

HON. GEORGE L. HECHLER,

Director of Fire Service.

DEAR SIR ;—The following is our report for the year ending December 31st, 1897 :

DEPARTMENT OF LAW.

Department of Law.

Corporation Counsel,

MINER G. NORTON.

SIMPSON S. FORD,	First Assistant.
WILLIAM H. BOYD,	Second Assistant.
SAMUEL H. CROWL,	Third Assistant.
CHARLES G. EMERY,	Stenographer.
JACOB M. CRAWFORD,	Typewriter.
OSCAR J. HORN,	Clerk.

Report of the Corporation Counsel.

CLEVELAND, O., January 1, 1898.

To the Council:

I herewith submit a report of the business of the Department of Law for the year ending December 31, 1897.

The accompanying schedules contain a statement of the litigation in which the city is interested, showing the number of actions brought, the number disposed of, and the number now pending in the various courts of record, together with a comparative statement of the amount claimed and amount paid in the various cases. It also contains a statement of the kind and number of papers drawn by, referred to, and reported on during the year.

Respectfully,

MINER G. NORTON,

Corporation Counsel.

DEPARTMENT OF

CHARITIES AND CORRECTION

Department of Charities and Correction.

OFFICERS.

WILLIAM J. AKERS, Director.

HAROLD A. BUSHEA, Secretary.

W. K. RICKSECKER, Superintendent of Infirmary.

PHIL. H. DORN, Superintendent of House of Correction.

C. WAGNER, Supervisor of Cemeteries.

Director's Report.

HON. R. E. MCKISSON, *Mayor*.

CLEVELAND, O., January 1st, 1898.

DEAR SIR:—Herewith I have the honor to transmit the Annual Report of the Department of Charities and Correction for the year 1897.

In preparing this report some slight changes have been made in its arrangement, some tables that have appeared in former years having been eliminated and others added, in the main, however, the general outline has been preserved.

FINANCIAL.

The financial statement of the department, as a whole shows the receipts for the year, including cash on hand January 1st, 1897, to have been \$314,269.76; disbursements, \$262,664.25, leaving a cash balance in the hands of the City Treasurer to the credit of the Department of \$51,605.51.

Of the total receipts of the department, the Division of Infirmary received the sum of \$109,259.73, the portion allowed by law of the Dow and Cigarette tax, the balance was derived from the sales and earnings of the different divisions.

There is due the Division of Infirmary, for the care of indigent insane patients, \$68,830.79. In former years the County has reimbursed the City for this service, but has failed to do so for the last quarter of 1896 and all of 1897; the bills have been made as they became due and presented the County Commissioners for payment, but the Judge of the Probate Court, upon whose order the patients were committed, has refused to

sign the voucher authorizing the payment of the claim, therefore the Commissioners have withheld settlement. The Judge of the Probate Court continues to remand insane patients to the care of the City Infirmary, where they are received under protest, pending a settlement of the City's claim. I have placed the claim in the hands of the Director of Law, and asked to have the matter pushed forward to an early settlement. If the County is not liable for this service, the State certainly is, and it is an injustice that Cleveland should be compelled to bear the burden of supporting over three hundred incurable insane patients; no other city in the State is required to do this.

A special tax of \$6,190.50 was placed against the Infirmary property for the paving of Scranton avenue. It seems to me that special taxes of this nature should be paid by the city from its general fund, instead of placing it on its Institutions, which receive no portion of the general tax and are not directly interested in such improvements.

The splendid financial showing made by the House of Correction during the past two years has been well sustained during the year which has just closed, despite the decreased population and the increased cost of the food supplies. This Institution is not only self-sustaining, but it is operated at a profit large enough to permit of keeping its buildings and fixtures in first class condition, as well as adding each year to its permanent investment in the way of new and improved mechanical devices and facilities for doing business.

By reason of a breakage which occurred in the culvert carrying a portion of Kingsbury run across the House of Correction property, it was necessary to expend over \$2,500.00 in repairing the same. This expenditure, which neither increased the productive power of the manufacturing plant or added to its facilities as a penal institution, was a necessity in order to preserve what had already been accomplished in the way of filling the gully through which the run traverses, and which will be of great value as land on which to build as the needs of the institution increase. Had it not been necessary to meet this unexpected outlay, the net profit of the Division for the year would have been increased by that amount.

THE INSTITUTIONS.

As the population of the city increases the number of the indigent also increases; during the past year the average daily population of the Infirmary and Hospital was 753 (the largest in its history). This is an increase of 74 over the previous year.

Your attention is respectfully called to the report of Superintendent of the Infirmary, by which it will be seen that the entire per capita cost of maintenance and attendance per annum amounted to \$115.12 which is a decrease of \$1.79 per capita over the year of 1896.

The buildings, furniture and fixtures of the institution have been placed in first-class condition throughout: the roofing, tinning, and spouting have been renewed, the interior of the Infirmary and Hospital repainted, furniture repaired when possible; otherwise replaced with new and modern ware, separate quarters prepared and furnished for the old married couples so they could spend the few remaining days left them together, new toilet rooms added to the Infirmary Department, the old ones having become unsanitary, additions made to the surgical appliances and laboratory equipment, and portable bath tubs provided for the Hospital for use in fever cases. New machinery added to the laundry, new brick buildings erected for the outside work, additional heating facilities provided, and the boilers and machinery thoroughly over-hauled and placed in good repair. Whenever possible the labor of the inmates of the Middle and Insane wards has been utilized in doing this work.

Notwithstanding the fact that our insane wards are simply places of confinement for the indigent insane committed to our care, and that we are totally without the facilities that go to make up an Insane Asylum, still, with such meager methods as we have been able to apply during the past year, there has been discharged as cured from the Insane Department of the City Infirmary twenty-one patients who were committed to us as incurably insane.

I am satisfied that the care they have received, and the fact that they are all required to perform some out-of-door labor when possible, has in a large measure contributed to the cures that have been effected as above.

I would respectfully suggest that a House Physician be detailed to this department, who would give his entire time to the care and treatment of nervous and mind diseases.

During the past summer the necessary legislation was passed by the Council and contracts let for the construction of a building to be used for a Children's Hospital, and at this writing the structure is enclosed, and under roof, and will be ready for occupancy by June 1st., 1898. When completed this building will accommodate 100-little ones in the different wards. Up to the present time \$10,400.00 has been expended and it will require an expenditure of about \$16,000.00 to complete the work in hand.

I would recommend the construction of two small "isolation buildings" to be used for Children's contagious diseases at a cost not exceeding \$800.00 each, one of which to be used for Scarlet Fever, and the other for Diphtheria cases. With this addition to the complement of buildings now in use and under construction, the city would be in excellent condition to care for all classes of its indigent sick.

There has been treated at the City Hospital during the past year a total of 1094 patients. This is 252 in excess of the number cared for in 1896. At that time it was feared that the limit of the capacity of the institution had been reached but by reason of the skillful medical treatment and careful attention given each patient, and the excellent work of the nurses, it has been possible to care for the increased population. For the first, credit must be given the members of the Medical Staff for their unfailing interest and devotion to this work of mercy. For the second, great praise is due the nurses, who under the able supervision of Miss Kirkpatrick have labored faithfully and intelligently for the best results.

Your attention is called to the report of Dr. S. W. Kelley, Secretary of the Medical Staff which will show the demands that have been made upon the staff and the resources of the institution.

Out of a total of \$29,803.14 disbursed for supplies in the Out-door Relief Department, over \$19,000.00 was expended during the first four months of the year; this extraordinary demand was occasioned, largely, by the excitement raised during

the early winter over the alleged unprecedented amount of suffering existing among the poor; the result of this was to attract to the city a horde of paupers from neighboring cities, and to direct the attention of impostors and the shiftless class towards the city and private charities. The bad effects of this are being felt at the present time, as the private charities were impoverished during the excitement of a year ago, and the result is that the city is now being called upon to care for a number of cases heretofore provided for by the private organizations.

In the administration of the Out-door Relief Department, since I came into office, I have demanded a rigid investigation into the condition of the applicants for relief, and where necessary to grant relief have required the head of the family, when able, to render a return in labor of some kind. As a result I have been able to furnish the labor for the making of a number of improvements, as well as completing some repairs which were necessary, and would have otherwise entailed an outlay in ready money; notably, at Erie Street Cemetery the fence along the entire north side of the grounds was reset by this labor, for which a contractor proposed to charge \$350.00; it was necessary to lay a new sewer in Valentine street to furnish drainage for the new Children's Hospital, by using the labor of the Out-door Relief Department a saving of over \$400.00 was made on the price it would have cost if let and built by contract. At West Park Cemetery all the preliminary work has been done by this labor, and by the time spring opens and we are ready to let contracts for grading and macadamizing, all the rough work will have been accomplished. This work has also another value; it has been the means of ridding our books of a number of lazy, worthless characters, that were content to allow the city to furnish them with supplies so long as no return was asked for, but now that they are aware they must work for what they receive, they go where they can obtain a return in money. During the last month of the year 976 days labor was obtained for assistance rendered, and each winter month hereafter will show an increase.

During the year just closed twenty-seven foreign paupers were deported with the assistance of the Federal Government. All of these cases had applied to the city for relief, and were de-

ported before they had acquired a residence in the United States. This was necessary to prevent them from becoming a perpetual charge on the city.

HOUSE OF CORRECTION.

This Institution, combining as it does a reformatory, penal institution and manufacturing plant, is the one, in my opinion, requiring the greatest care and study in its administration. How carefully those in charge have labored to make it excel in all its characters is most ably set forth in the report of Supt. Dorn.

The physical condition of the buildings is as good as it is possible to keep structures of their advanced age; a number of improvements have been made of a sanitary nature during the past year, a system of shower baths has been installed in place of the old individual tubs; new closets, urinals and washstands substituted for the old system which had become unsanitary; the roof of the main building has been placed in thorough repair and such other repairs as were necessary have been made, as well as a large amount of new and improved machinery added.

I heartily second the recommendation made by the Board of County Visitors that instead of the employes being housed and boarded in the institution additional compensation be granted them, sufficient to enable them to board outside the buildings. The dining room now used by the employes could then be converted to the use of the prisoners, who are at present forced to eat and sleep in practically the same room. This change would work a benefit not only to the prisoners but to the employes as well, who should not be required to be separated from their families.

The discipline of the institution has been well preserved and it speaks well for the kindness and firmness of those having charge of the prisoners, that it has not been necessary in a single instance to resort to harsh measures to enforce obedience; those of the inmates as are employed in the manufacturing department seem cheerful and willing to perform the tasks allotted them. It is to be hoped that the demand for our product will continue in the coming year as great as in the past, so that their labor can be employed in this direction.

The following persons were appointed by the Judge of the Common Pleas Court, as a Board of County Visitors: Gen.

James Barnett, Geo. T. Chapman, Judge E. J. Blandin, Mrs. D. E. Leslie, Mrs. S. Joseph and Mrs. W. J. Sheppard. This Board has made many visits to the different Institutions, and I am under many obligations to the members thereof for the kindly interest they have shown, and for the valuable suggestions offered by them. Their report is offered herewith, and I hope they will continue during the coming year to give me the benefit of their advice.

The officers and members of the local charitable organizations have also assisted me with their advice and experience, and I trust that during the coming year the City Charities and the private organizations can be brought in still closer relationship.

During the past year regular monthly meetings of the Board, consisting of the Mayor, Police Judge and Director of Charities and Correction, to whom is relegated the power to grant paroles or pardons to prisoners, have been held on the second Tuesday of each month, and the rule of releasing prisoners on parole at that time only has been rigidly adhered to. In only one or two instances have the paroles granted by the board been violated.

CEMETERIES.

By changing the site of the West Side Cemetery from Lorain Heights to the Pest House Farm, which will be known in the future as West Park Cemetery, there was added to the cemetery property of the city that which will be one of the most picturesque and beautiful burial places in the country. In addition to the property received in exchange, the Division of Cemeteries will also receive from the Division of Infirmary the sum of \$20,000.00 with which to purchase the additional land necessary to make the site complete, and still have from twelve to fifteen thousand dollars to make a start toward beautifying and placing the property in condition for doing business. This exchange was made upon the recommendation and request of citizens of the West and South Sides and the advice of competent engineers and landscape gardeners. In the past the most beautiful of the public cemeteries in the city have been located on the East Side, but with the completion of West Park Cemetery there will be located, within easy reach of the West and South Sides, a burial spot that promises to rival the famous cemeteries of the leading cities of

the country; certainly nothing in Cleveland or its neighboring cities can surpass it in natural beauty. A great deal of the preliminary work in the way of surveying, making plats and profiles has already been accomplished, as well as the rough work of removing under-brush, thinning out and removing dead and fallen timber, etc., which will be pushed forward during the winter with such labor as can be obtained from the Out-door Relief Department.

Contracts for the principal work will be let in the early spring, and I expect interments will be made in the cemetery during the coming summer.

The earnings of the Division of Cemeteries amounted to \$26,809.55 which is about \$2,500.00 less than during the previous year; it is but reasonable to expect that the earnings of the older cemeteries will become less each year; after a cemetery reaches a certain age, and the most desirable lots are disposed of, the income is certain to diminish. In addition to this all the lots in the cemeteries on the West Side are sold, and there are few grave spaces for sale, therefore we are deriving no income from that source. With the opening of West Park Cemetery, which is designed to furnish a burial ground for the West and South Sides, the earnings of the Division will show a large gain.

It seems to me that in addition to making the foregoing report, it is within my province to suggest what measures should be taken to prevent the growth of pauperism, and to prevent an increase in the expenditure of public funds for that purpose. Cleveland has long since ceased to be a village and has become the metropolis of Ohio, and one of the largest cities in the United States. Rules that guided the dispensation of the public charity a decade ago are not applicable to the present condition and character of our population. The number of paupers and criminals in proportion to the population has increased in a greater degree.

By reason of the rapid growth of the city in the past few years there has been attracted to it a large foreign element, many of whom having no sympathy or pecuniary interest in the municipal corporation, and whose ideas of citizenship have not as yet had an opportunity to develop. Among this class there is a deep founded belief that the city is bound to provide

for them in time of need, and that to them means when they are without steady employment ; they do not hesitate to ask for aid and when successful in obtaining what they desire, accept it with no compunction of conscience as to the manner in which it has been obtained. There is also a class of our own people who are as ready to practice fraud and imposition as the latter. It is with a view of lessening the imposition which is continually practiced upon the city and private charities that I have urged the necessity of the establishment of the Charity Clearing House to prevent the duplication of relief, detect fraud and provide means for more rigid investigation of the condition and worth of those applying for aid. It has been my object, and I have tried in every way to impress it upon others engaged in charitable work the necessity of rigid investigation, and where it is necessary to grant relief to make that relief of as temporary a character as possible, and in every way to assist those in distress into a position in which they can help themselves. The Charity Clearing House could accomplish much in this direction were it only patronized by the private charities ; with the co-operation of the city, I am sure it will be the means of lessening in a degree the amount of pauperism.

The future of the nation is in the hands of the children of to-day, who will be the citizens of to-morrow. The importance to society of the problem of properly caring and training them for the duties of citizenship cannot be overestimated. To the class of unfortunate youth born in poverty and reared in ignorance we owe a particular care, both to their physical and moral training. Up to the present time we have had no hospital in the city that could care for indigent children. The law does not allow minors to be cared for in the same building with adult indigents, and it was to meet this necessity that the Children's Hospital was projected. This institution will treat all classes of diseases and deformities ; it will be the means of preventing many a child from becoming a confirmed cripple, which, even with the best of opportunities, is a handicap in life's battle. It will also relieve the mothers upon whom devolves the great burden of their care, as well as in many cases their support. There are many instances in which a widowed mother is able to provide for her family by her own exertions as long as those de-

pendent upon her are in health, but let one of her family become ill and she is forced to give up her daily labor in order to minister to the necessities of her suffering child. If the sickness be prolonged, in the natural course of events she will either have to depend upon a private charity or go to the City Out-door Relief. Perhaps after the little one recovers she may be able to return to her employment, but in a great many cases she will find her place has been filled by another, and if continued ill luck pursues her she will soon become a regular dependent upon the city. The effect of this upon the children is far from beneficial, it destroys their self respect and the effects follow them through life.

With the Children's Hospital in operation, we will be able to relieve the mother of her charge in time of sickness and furnish better care and medical attendance than they possibly could receive at home, and in many cases cure them of what might otherwise become a chronic disease and thereby cause them to become a dependent upon charity.

The above institution will minister to the physical diseases of the poor children. Among the children of all classes there are a certain number who require a firmer discipline and a stronger moral training than they receive at home. The children of the poorer classes are from a necessity left more to themselves, than those of any other class. History proves that this is a country of vast possibilities, and that it is not improbable that the boot-black of to-day may one day sit in the White House and guide the destiny of the nation. It is remarkable that many of the great men which this country has produced, have sprung from the ranks of the most obscure class with whom existence is a struggle, and to whom the law of the survival of the fittest almost universally applies. It is to this class who are left almost entirely to themselves that the state should devote its care. A child left to himself or herself without proper restraint is almost sure to drift into evil ways, which sooner or later makes it necessary that forcible restraint be applied, and in order that such restraint be effective, it must be in the line of education, not only of the heart and head but of the hand as well. To accomplish this most effectually, houses of refuge and reform schools with restraining influences have been found necessary. In institutions of this kind,

children can be brought up under proper control and taught that respect for law and order which goes to make useful, law abiding citizens. Cleveland has no such institutions; our judges hesitate to send children of tender years to jails and workhouses, knowing the effects of the companionship of older criminals; the result is the culprit learns to have a contempt for the law, until he reaches an age when he must be treated as a criminal.

I sincerely trust that the recommendation contained in your communication to the Council in August last with regard to this matter, will be taken up and acted upon during the ensuing year. An institution of this kind should be provided which would combine a home, both mental and manual schools, and at the same time be a reformatory to which youthful incorrigibles could be committed. The law provides that children when committed to this institution shall remain there until of age, but vests in the Board of Managers power to grant paroles for good behavior.

In the Children's Hospital and the Refuge are provided the means of caring for the physical and moral training of our incorrigible youths. They both aim at the same result i. e. to decrease pauperism and vice.

The necessity for the enforcement of the Cumulative Sentence Law as a preventive against pauperism becomes more apparent to me every day. The records of the Workhouse show that we have many prisoners who have been sent there from 5 to 70 times, and all on short sentences. The law makes it a penal offense for a man to fail to support his family, he can be committed to the Workhouse for non-support or his wife can be granted a divorce upon the same grounds.

The head of the family is sent to prison by the Court as a punishment for some crime which he has committed. He is not punished near as much as the innocent members of his family whom he has wronged the most. The prisoner is well housed and well fed, but his family is often turned into the street to shift for itself, homeless and penniless and tainted with the stigma of being the family of a criminal; society is slow to extend them a helping hand, and too often the result is ruin. This is where the Workhouse is making criminals and paupers. The

Cumulative Sentence Law, providing as it does a short sentence for the first offense and increased period of servitude with every additional sentence, would be the means of causing the offender to fear the Workhouse. The short term prisoner is of but little value to the institution from a commercial standpoint when sent there for such minor offenses as drunkenness, and those of similar character; for the first we simply build up the prisoner's system and send him out for another debauch, and when we receive him again under the oft recurring sentence of \$1.00 and costs, we have to go through the same process again, and by the time he is in fit condition to render some service his time has expired. The remedy for this is in longer sentences for repeated offense, thereby making the prisoner's labor more skilled and of greater value to the institution. This is the first step, then after his labor is of some commercial value, divide his earnings with those who are dependent upon him for support. As he becomes more skilled his labor will be of greater value and greater benefits will accrue to his family; the moral effect upon the prisoner in any instance will be better. At the present time there are the names of many families upon our books in the Out-door Relief Department who are drawing supplies therefrom whose support is in the Workhouse. It is true that by dividing the earnings of the prisoner with his family the income of the House of Correction may be reduced, but in the end the city will not be the loser, as the expenditures of the Out-door Relief Department will be materially lessened.

The House of Correction was designed for a reformatory, and as such can accomplish much in arresting the downward steps of the wrong-doer, but we sadly misapply the use of the Institution when by committing a prisoner to its care for reformation we make paupers out of his family, or send them to the street to gain their daily bread by any means which presents itself.

This matter should be remedied at once, all that is necessary to be done is to take advantage of the legislation which has been enacted and enforce the Cumulative sentence law; the effect of which will be:

- First, to instill in the petty offender a fear of the workhouse.
- Second, to increase the value of the prisoners' labor, and
- Third, and most important, to prevent pauperism and degreda-

tion in the family of the unfortunate who is committed to the care of the House of Correction.

The Humane Society purposes presenting to the legislature an amendment to the law which provides for the support of children by the parents; the amendment will make it compulsory upon the children to provide for their indigent parents. We are maintaining a number of old and decrepit men and women in the Infirmary whose children are in more than comfortable circumstances, but who refuse to provide for those who nourished and cared for them when they were unable to provide for themselves. It is to be deplored that it is necessary to enact a law to force a man or woman to fulfill their filial obligations, but it seems to be the case, and as other states have had to resort to the same measure, I hope the Society will be successful in its efforts.

The experience of the past year in dealing with the City's poor has simply confirmed my previous opinion, and that is, in brief, in order to reduce the amount of existing pauperism, we must make it harder for an unworthy person to live off charity, than by working for a living. Cases of genuine distress from causes which attach no blame to the unfortunate sufferer, should be promptly and humanely relieved; but when that relief is extended beyond the time when the recipient can care for himself or herself, we are doing not only them an injury but the community an injustice.

"To give worthily in charity is commendable; to give to the unworthy is a crime."

It would be better for the community, and far better for the poor if indiscriminate alms-giving could be abolished, that is the feature that works the greatest evil. A very large per cent. of the charity thus bestowed is misapplied.

I wish to express to your Honor, my fellow members of the Board of Control and the members of the City Council, my sincere thanks for the warm support and hearty co-operation that has been accorded me, and to commend the heads and employes of the different divisions for their faithful performance of duty.

Respectfully submitted,

WM. J. AKERS,
Director of Charities and Correction.

BOARD OF COUNTY VISITORS.

GENERAL JAMES BARNETT, *Chairman.*

GEORGE T. CHAPMAN,

JUDGE E. J. BLANDIN,

MRS. D. E. LESLIE,

MRS. S. JOSEPH,

MRS. W. J. SHEPARD, *Secretary.*

Report of Visiting Committee.

W. J. AKERS,

Director of Charities and Correction,

DEAR SIR:—The Board of Cuyahoga County visitors appointed by the Common Pleas Court, April 22d, 1897, wish to report to you that they have visited and thoroughly inspected the City Infirmary and Out-of-Door Relief Department, also the House of Correction.

Our visits in each instance were made without previous announcements. We found all of these institutions scrupulously neat and clean, and we think it is fitting that we should say that the Infirmary is as much like a home as it is possible for any institution to be made.

We most heartily endorse your humane act in allowing the old people who are married to room together, instead of living in separate parts of the building as in the past.

We approve your method of having all the inmates who are able, work in the house or on the farm.

We consider the erection of the Children's Hospital during the last year, as the fulfillment of an absolute necessity.

We have examined the food furnished to the poor through the Out-of-Door Relief Department, and find it pure and wholesome. Your method of having some able bodied member of a family work for the supplies received, we believe to be the right one.

We suggest the following changes be made at the House of Correction, viz.: employes when off duty should be allowed to go to their homes for rest. A man is but little more than a prisoner when obliged to live away from his family. By making this arrangement, we believe the dormitories used by them could be

converted into a dining room for prisoners, which we consider would be better than the present method of having them sleep and eat in the same room.

As a Board we most earnestly hope that the near future will add another very much needed institution to the list. We are now referring to that of a refuge for incorrigible children. There are very many neglected children, who, if taken care of in the right time, given an education and a trade, will become good men and women.

Many of our best citizens have no idea how children are neglected in some portions of our fair city. Should they make a visit to our markets after 10 p. m., and see the number of children, mostly girls, picking up the rotten fruit and refuse from butcher-stalls, they would see the necessity of doing something at once. It sometimes happens, the temptation being placed before them and more then they can resist, that a piece of meat or cake is stolen. The policeman in discharge of his duty must arrest the child. The finished story—we have in our House of Correction and Retreats.

Most of the members of this Board are interested in various charities and philanthropies which bring them in close touch with many of these children; and in their name especially, as well as of the Board as a whole, we urge that the plan proposed by you, that of erecting a building as a "Home" or "Refuge" on land owned by the city on Lorain Street, will be begun at once.

MRS. W. J. SHEPARD, *Secretary.*

DIVISION OF INFIRMARY.

W. K. RICKSECKER.....Superintendent.

E. E. BATT.....Bookkeeper.

Report of Superintendent.

THE HON. W. J. AKERS,

Director of Charities and Correction,

DEAR SIR:—Accompanying this I hand to you the report in detail of the Division of Infirmary, including the City Hospital and Out-Door Relief Department, for the year ending December 31st, 1897. The total expenditures of the Division for the year amounted to \$159,685.50, of which sum \$32,785.29 was for fixed charges and taxes; \$106,314.92, for supplies and \$20,585.29, for furniture and fixtures and land and buildings.

By reference to table No. 9 it will be seen that the per capita cost of maintenance supplies shows a slight increase over the year 1896. This is due in a measure to the advanced cost of all food products, notably in flour, potatoes and sugar, over the previous year. We have also added a number of conveniences and comforts for the old people, which would in itself warrant a slight increase in expense; taken as a whole, however, and including the fixed charges, the cost per capita per annum is \$1.79 less than for the year 1896. It has been my aim in the purchase of supplies to buy good, wholesome food and durable clothing at the lowest possible price.

In repairs and improvements, only such expenditures have been made as were necessary to keep the buildings in good condition, and provide for the health and comfort of the inmates; the old toilet rooms in the male department of the Infirmary had become so unsanitary as to be detrimental to health, and were replaced by an entire new system, located in a building apart from the living and sleeping rooms, and as sanitary measures other brick buildings were added for outside work. In the insane wards, new flooring was laid, and almost all that entire portion

of the building repainted. New sink and bath tubs were placed in the women's department of the Infirmary, and all portions of the building received some attention during the year.

One of the features of the year's work was the preparation of quarters for the old married couples; this has been one of the happiest improvements of the year, and the old people fully appreciate the thoughtfulness that has reunited them for the last stage on their life's journey.

Your attention is called to the tables showing the daily average population of the institution for the different years, as compared with that of 1897, by which it will be seen that the past year has been the heaviest in the history of the institution. The daily average population for the year 1897 was 753 as against 679 in 1896, the next largest year.

The condition and facilities of the City Hospital show a marked improvement over previous years. The capacity of the institution has been taxed at all times during the past year almost to its limit; 252 more patients were treated than during the previous year, and at times every bed was occupied, but it has never been found necessary to turn away a worthy applicant.

The medical and house staff and attendants have labored faithfully and diligently to accomplish the best results. I think in every way the Cleveland City Hospital will compare most favorably with any in the city, or similar institutions throughout the country.

Repairs and improvements have been made wherever needed, either to increase its facilities or add to the comforts of the patients. New sinks and closets have been put in place and all the plumbing put in repair; the heating capacity increased, new screens placed in every door and window. New woven wire mattresses substituted for the old spiral springs on the beds, and all the iron beds repainted a snow white, with brass knobs and rubber rests added thereto; all the old furniture painted in harmonious colors, and all beyond repair replaced with new; portable bath tubs for use in typhoid cases were purchased, and numerous additions made to the paraphernalia of the laboratory. There was also added to the equipment of the laundry a new sterilizer for the use of the hospital.

Taken as a whole the entire institution, both as to buildings and fixtures is in good condition of repair, and the expenditures in this direction for the coming year will be much less than during the year just closed.

Contracts were let in September, and work commenced on a building to be used as a Children's Hospital. The work is well under way, and the building will be ready for occupancy by June 1st, 1898. So far a little over \$10,000.00 has been expended, and it will require about \$16,000.00 more to put the building in readiness for occupancy. The new building will have accommodation for one hundred patients, and will fill a long felt want.

There are some permanent improvements which should be made, all of which will in the end, I think, prove a saving in the operating expenses of the institution.

An electric light plant should be installed without delay. During the spring, fall and winter months the gas bill runs from \$250.00 to \$375.00 per month, and when the new Children's Hospital is in operation it is safe to say, at least one-third more will be added to that amount. Electricity is much safer, cleaner and more healthful than gas, and I would sincerely like to see it substituted for the present system.

Another large item of expense is the cost of transportation of coal from the railroad to the Infirmary: I would suggest that a switch be built from the C. L. & W. Railroad, which crosses the lower part of the Infirmary property to the foot of the hill, and in addition to this the hill should be paved with refuse stone. This would save the use and care of one team.

The year of 1897 was a particularly hard one for the Out-Door Relief Department. During the early winter months an unusual number of applications for relief was received, and on account of the lack of employment in the city during the summer, it was necessary to continue much of the relief a greater portion of the year. Over 7,500 cases were investigated, and supplies amounting in value to over \$29,000.00 were distributed. Ten thousand days' labor was received in exchange for assistance rendered. The labor thus received was distributed among the Cemeteries, Street Department and Infirmary. Those at the Infirmary were employed in building a sewer for the Children's Hospital, and sawing into fire wood the old planks from off the

Viaducts; this wood yard has been the means of saving the city a great deal of money during the short time it has been in operation; many hundred loads of wood have been sawed up and burned in place of coal, and it has kept away a large number of unworthy applicants, who have strong objections to performing any kind of labor.

During the past year the Board of County Visitors has visited and inspected all the different institutions in the division. In this connection it has occurred to me how little is really known by the citizens at large of the extent and manner in which these places are operated. I would be very glad if more interest in their workings was manifested by the public.

Visitors are always welcome on the visiting days, and the entire institution is open for their inspection.

I wish to express to you my thanks for the generous aid and advice you have given me, and to acknowledge the valuable assistance rendered by the Steward of the Infirmary, his estimable wife, and the Superintendent of the Hospital, as well as by all the employes.

Respectfully,

W. K. RICKSECKER,

Superintendent Division of Infirmary.

Report of the Medical Staff of the City Hospital.

MR. W. J. AKERS,

Director Charities and Correction:

DEAR SIR:—We here present to you the Seventh Annual Report of the Medical Staff of the City Hospital. The accompanying tables give numerous data concerning the work performed during the year in this institution.

Among the other figures it will be observed that the number of patients cared for is 1094. This is an increase of 252 patients over the previous year, and yet we feel safe in asserting that they have been better cared for than ever before.

The Department is to be congratulated upon a great improvement in the furnishing and general care of the wards and rooms, also in the nursing.

The work of the House Staff, excepting when inconvenienced by resignations of members before the expiration of their terms, has proceeded smoothly and efficiently. Each year we note improvement in the laboratory work and increased interest in their duties manifested by the resident staff.

The work of the laboratory has far outgrown its present accommodations. No modern hospital is complete without adequate facilities for making the microscopical, chemical and bacteriological examinations and tests which medical science is now able to employ in the detection and cure of disease. Inasmuch as a morgue is also an inevitable necessity in connection with an institution of this kind, we desire to recommend that a structure or structures be erected suitable for the purposes of morgue and laboratory.

The progress made in erecting a building for a children's department meets the approval of the staff; and there can be no

doubt that when completed and properly equipped a great amount of much needed work can be accomplished.

It is earnestly hoped that the department will not stay its hand in the good work, until there are also erected and equipped suitable separate buildings for contagious diseases. If possible these are even more urgently needed than the children's general department; for no hospital in the city accepts contagious cases, which most often occur in homes least suited to care for them properly, or break out in institutions where many other lives are jeopardized by their presence, and in either instance it is so necessary to isolate them. Two small buildings, one for scarlatina and one for diphtheria, at a considerable distance from each other and from those now on the ground, would fulfill the most urgent requirements.

Among the minor and yet important needs of the institution are a fireproof safe in the office, in which the registers should be kept; and a fireproof vault in the basement for the preservation of the records of cases.

There have been but few changes in the membership of the staff during the year. The officers elected at the annual meeting on June 23d were: Dr. C. A. Hamann, president; Dr. G. B. Case, vice president. The secretary was re-elected.

Dr. H. J. Lee resigned his position as obstetrician to the hospital, and Dr. D. S. Hanson was appointed in his stead. Dr. Lee had been also a member of the Examination Committee, and this place was filled by the election of Dr. E. G. Carpenter.

The death of Dr. J. F. Armstrong created another vacancy in the Examination Committee, which was supplied by the election of Dr. G. D. Upson.

We take this opportunity of conveying to you, and placing upon record the unanimous sentiment of this staff that your administration in this institution has exhibited such a knowledge of the functions and the needs of a hospital of this character, and such an interest and energy in promoting its welfare as have won the hearty approbation of the medical staff.

Respectfully yours,

S. W. KELLEY,

Secretary.

Department of Charities and Correction.

CEMETERIES.

Supervisor's Report.

HON. WM. J. AKERS,

Director of Charities and Correction.

DEAR SIR ;—I herewith present to you my annual report of the Department of Cemeteries, for the year ending Dec. 31, 1897. The tabulated statements attached will show that the different Cemeteries have been run economically and on a business basis. The state of funds would not permit us to make any special improvements, although some are absolutely necessary. The conditions of the buildings and fences, both in Woodland and Erie Street Cemeteries, is such that they certainly will have to be repaired and painted in the spring. During the past year exchange was made of the Lorain Heights Cemetery for the West Park Cemetery and an expenditure of Thirty thousand dollars (\$30,000) will be necessary to render the latter in condition for burial purposes.

Thanking you for courtesies in the past, both to myself and my assistants, I am,

Respectfully yours,

C. WAGNER,

Supervisor of Cemetery Department.

Department of Charities and Correction.

HOUSE OF CORRECTION

Superintendent's Report.

HON. WM. J. AKERS,

Director of Charities and Correction,

DEAR SIR:—I have the honor to present herewith the statistical and financial report of the House of Correction for the year ending December 31, 1897, the twenty-seventh in its history

Preliminary to some very brief mention of the year's work, I regard it due you to say that I fully appreciate the characteristic attention which this institution has received from you since assuming the responsible duties of this Department, nor should I omit acknowledgment of the continued courtesies and interest of His Honor, the Mayor, and other officials with whom I have been brought in contact by the varied duties of my position.

The accompanying statistical information and financial showing presents with reasonable clearness and detail the history and results of the operations of the year.

As I have previously endeavored to express, our institution is primarily a House of Correction, and incidentally a manufactory. Our first and most constant duty is to provide a place for the detention, and to endeavor for the moral and physical improvement, of those whose liberty is dangerous or debasing to the community. To this first duty, this nobler purpose, we have sought to make every endeavor of the year loyal; and I feel that considerable has been accomplished, and all without the necessity of any aid from the City; and closing with a comfortable cash balance in the Treasury; practically no indebtedness and satisfactory increase over the previous year in the total of assets carried to the credit of the City.

Early in the year we completed the improved bath system, which supplants the old method in use since the beginning of the institution. The new plan, by separate overhead shower

baths, thoroughly and healthfully cleanses twenty-two inmates as quickly as one by the old way, and absolutely without the possibility of contamination endangered by bathing many prisoners one after another in a large tub. This improvement is of thorough construction in every detail—in foundation floor of portland cement—and in plumbing, drain pipes, and water supply pipes, hot water regulator, etc., a most desirable addition to the facilities of the institution, and a benefaction to its inmates.

In the same period was also accomplished a general reconstruction of the dining room and kitchen and extensive improvements of the cooking apparatus, permitting increased economy in operation. The improvement included the construction of a commodious pantry and much needed additions to the capacity and convenience of rooms overhead.

Since the erection of our buildings twenty-seven years ago, great progress has been made in sanitary construction, and a great deal learned about the planning of prison buildings with reference to sanitation. In the largest measure which the original construction of the buildings permitted, we have endeavored for healthfulness and cleanliness, while cheerfulness of surroundings has been sought to the utmost that whitewash, bright paint and neatly kept grounds can lessen prison gloom.

The conveniences of the factory have been greatly added to by a reconstruction of the stairways and outer entrances and additions and improvements in machinery and manufacturing methods.

The old closets of the factory which were certainly unsanitary even when new, have been supplanted by a new and thoroughly sanitary closet system. The conditions in the rear of the buildings and at the barn have also been materially improved by an extension of the sewerage and closet system upon the rear of our premises.

With increasing age, the buildings of course require increasing expenditures for repairs. Regarding it economy to keep our buildings in thorough repair, we have continued this work whenever needed, the most important items being the renewal of badly worn floors and many supporting joists and heavy timbers,

with some necessary extensions of foundations and interior painting and a somewhat general repair of the roofs, flushings, gutters, down spouts, etc.

An entirely unexpected and heavy item of expense has been occasioned by the break in the sewer, running through the rear of the property. On account of the great depth and difficulty of the necessary excavations, this has already required a large expenditure, and one that will be very greatly increased before completion.

This expenditure of course very materially effects the financial showing of the year just closed and will likewise that of the year to come.

I am constrained to add that I am impressed with the unfairness of compelling our institution to bear the entire burden of this sewer reconstruction. Whether as now constituted, or modified by any future system, or intercepting sewer, it cannot be regarded otherwise than as a section of the trunk or main sewer of the drainage system of an immense territory, the expense of which should be borne by the general fund or by pro rata tax upon all the property benefited. In estimating the share of the House of Correction, I would of course be willing to have all of the circumstances that occasioned this extraordinary expenditure taken into consideration; but to impose the burden in its entirety upon us to the crippling of the working capital, which by three years of hard labor we have acquired and are strenuously seeking to maintain, deeply impresses me as flagrant injustice.

The business of the year in manufacture has made very gratifying increase, notwithstanding the continuance, though in much lessened degree, of the general business depression and our insistence upon prices for our manufactured product, that assure a profit to our institution and prevent unfair competition with concerns producing similar products with non-prison labor. The wisdom of this policy seems to me clearly indicated by the result of the year's work in the department of manufacture and the influence it promises to have upon prices in the revival of trade that is slowly but surely coming.

Comparing our boarding account with the previous year, we have suffered somewhat of a decrease in gross receipts. This has been greatly due to our insisting upon a price for maintain-

ing outside prisoners that would fully reimburse us for making comfortable provision for their every reasonable requirement and pro rata share of incidental expense, which has prompted the management of a similar institution in this part of the state to receive prisoners at a lower rate for maintenance.

The unwisdom of this competition, has I think already impressed our neighbor, and our normal share of boarders from contiguous territory may soon return to us.

The report of the House Physician again indicates a year exceptionally free from epidemic or unusual run of disease, while the readiness with which such disorders, as have occurred, yielded to treatment, certainly indicates a healthfulness of surroundings that is very satisfactory.

I desire to indicate my appreciation of the constant unpaid and highly effective assistance from without that comes to us in behalf of the moral uplifting of our people.

I cannot too highly commend the genuine Christian spirit of the labors of Captain Dennison and his co-workers of the Salvation Army in the Sunday School ; of the non-sectarian services of Messrs. Hales, Daley, Mrs. Armitage and others under the admirable leadership of Captain H. T. Fisher ; and of the unremitting ministrations of Father Storm and assistant workers in the Catholic faith, Messrs. Martin and Crowler, the Misses Cary and Miss Caine. I have faith to believe that while the efforts of these good people may often seem to be "seed sown upon stony ground," some of it may find root and its fruit bless their labors. The gratitude of our City is due them.

I desire in conclusion to repeat my acknowledgment made a year ago of valuable services rendered by faithful and competent officials and employes ; to many of whom we are especially indebted for extra labor in behalf of the institution, given freely and cheerfully.

Respectfully submitted,

PHILIP H. DORN,
Superintendent.

Physician's Report.

HON. WM. J. AKERS,

Director of Charities and Correction,

DEAR SIR :—I have the honor to report as follows concerning the duties performed as physician in the House of Correction for the year ending December 31, 1897.

I have had occasion to give 4,852 prescriptions and attend 32 cases of injury, most of them of course received before entering the institution.

During the year there have been six deaths, five males and one female, from causes as follows : alcoholism three, pneumonia one, uraenic poisoning one, and convulsions one.

The quality of the food, the regimen of the prison and the general sanitary conditions, I regard with the highest satisfaction. The superintendent manifests the keenest interest in everything pertaining to the healthfulness of the prison and under his direction many and very important improvements have been made, helpful to cleanliness and sanitation. Very respectfully,

DR. C. A. STEDMAN,

House Physician.

APPENDIX.

Citizens' Committee on Public Improvements.

On January 22, 1898, a meeting of prominent citizens was held in the Mayor's office to consider the question of public improvements for the city, in response to the following letter sent out by the Mayor:

"DEAR SIR:—At the opening of the present city administration a non-partisan committee of twenty-two prominent business men was appointed to consider the question of public improvements. This committee applied itself diligently to its work, and through sub-committees prepared and adopted valuable reports which have been carefully followed by the administration. Various improvements of commanding importance to our city have been undertaken and either completed or pushed to advanced stages. It will be necessary, as was originally anticipated, to obtain additional legislation for some of these at the present Session of the General Assembly. I have therefore decided to appoint a committee similar to that which gave its services to these enterprises two years ago, and respectfully ask you to serve as a member thereof, believing that your interest in the subjects and your unbiased judgment will render you a valuable counsellor.

"In order that the matter may be properly and expeditiously considered, I have obtained detailed reports from the engineering department and the various directors covering what has been done, and have embodied the facts thus obtained in a comprehensive statement which is now ready for presentation. I would be pleased to have the committee thoroughly investigate the conduct of the improvements before accepting this report, and would suggest that sub-committees be again appointed to consider each enterprise separately as formerly.

"You are earnestly requested to attend the first meeting of the committee to be held in the Mayor's office, at 2 o'clock, standard time, Saturday afternoon, January 22, 1898, when an organization will be effected.

"I am, very truly yours,

"R. E. McKISSON."

In response to the foregoing invitation the following persons were present :

Messrs. Lea McBride, J. W. Conger, H. W. S. Wood, A. T. Van Tassel, A. A. Jackson, C. J. Manix, Milton Morton, Edward Wiebenson, T. W. Hill, M. A. Foran, L. N. Weber, Jacob Steinfeld, W. M. Day, C. W. Chase, Judge F. E. Dellenbaugh, M. G. Watterson, Judge E. J. Blandin and N. A. Gilbert, Esq.

The Mayor, who acted as Chairman, called for the reading of a report prepared by him on public improvements which is given on the following pages.

Mayor's Address.

CLEVELAND, O., January 22, 1898.

Gentlemen :

It has seemed to me wise to call together at this time, as on former occasions, a representative body of our citizens and taxpayers for the purpose of conferring with them relative to legislation needed for the interests of our city at the present biennial session of the General Assembly. As you are aware, numerous public improvements of commanding importance to the city are now under way, and it is to call your attention more particularly to the existing status of these that this meeting has been arranged.

In order to fully understand the scope of the work now in progress it may be proper to review briefly the manner in which it has been undertaken. Plans were laid at the opening of the present city administration in 1895, for the starting of various improvements for which the people had for many years been asking. Arrangements were made for a careful examination by expert sanitary engineers of national reputation, namely, Mr. Rudolph Herring, of New York ; Mr. Desmond Fitzgerald, of Boston, and Mr. George H. Benzenberg, of Milwaukee, relative to the systems of sewerage and drainage and water supply of the city, and their opinions were sought concerning the best methods to pursue in remedying existing defects. The subject of river and harbor improvements was also taken up and plans were considered for carrying them forward on a basis of thoroughness and permanence. The expert commission deliberated until November, 1895, when an elaborate report was made. Steps were forthwith taken by the city to comply with their recommendations. A non-partisan commission of twenty-two well-known

business men was appointed to consider the whole question of public improvements, together with the wisest and most expeditious manner of bringing them about. The men associated in this important work were :

Hon. L. E. Holden, Hon. S. E. Williamson, Samuel Mather, Francis J. Wing, W. M. Day, C. W. Chase, Judge F. E. Dellenbaugh, J. B. Perkins, C. F. Brush, Theodor Kundtz, Hon. W. J. White, W. F. Dietz, M. G. Watterson, S. L. Severance, J. H. McBride, O. M. Stafford, Myron T. Herrick, Julius Feiss, Dr. W. H. Humiston, H. A. Garfield, John Meckes, and F. W. Pelton.

This commission after careful deliberation recommended the procuring of the necessary funds by the issuance of bonds. Bills were drafted and were introduced in the State Legislature and passed in April, 1896, authorizing the city to proceed on this basis. They provided for the issuance of \$500,000 bonds for river and harbor improvements; \$1,500,000 for a new water tunnel; \$750,000 for an intercepting sewer system, and \$100,000 for a garbage plant, and \$250,000 for bridges. The legality of some of the Acts, was, however, questioned and it became necessary to have the matter brought into the Supreme Court where it was held until July, 1896, when the validity of the laws was established.

It is not necessary to go into all the details of the steps taken during the succeeding months. It is sufficient to say that the work has been advanced through progressive stages by the assistance of prominent citizens; ordinances have been drafted and passed; a vast amount of negotiating and conferring with railroad officials and others has been done, and it is with a feeling of satisfaction that the Administration is able to report that substantially all of the improvements authorized under these appropriations are now either under actual construction or entirely completed. The city administration is ready to carry forward the undertakings still under way to expeditious completion with proper co-operation on the part of the citizens, together with that of the Council and the State Legislature.

As was anticipated at the outset it will be necessary to continue some of the improvements, particularly the intercepting sewer system, through a number of years in order to complete them, and as the appropriations made at the last Session were

designed to cover the years 1896 and 1897, it is essential that steps be taken to provide the funds needed for the years 1898 and 1899.

In addition to appropriations desired for continuing improvements now in progress, I believe that steps should be taken at once for building a new City Hall, in order that the present rented quarters may be abandoned.

It is proper that the public should be fully informed of the manner in which the appropriations formerly made have been expended and of the results accomplished, in order that well-advised action may be taken with reference to the future. Hence this statement has been prepared, and is herewith submitted.

RIVER WIDENING.

Alterations of vast importance to the marine and business interests of the City of Cleveland have been made during the last two years in the channel of the Cuyahoga River, and with some additional attention the entire portion of this valuable waterway within the city limits will be placed in condition to meet the requirements for many years to come. As a result of the united effort of the city administration and the River and Lake Front Commission plans for the improvements have been adopted as far up as Seneca Street Bridge, and the river has been substantially widened from its mouth to the Center Street Bridge. With the removal or straightening of various angles and bends beyond the latter point the entire channel will be made available for the easy passage of the largest vessels now plying the Great Lakes. New dock lines have been established for the river within the city limits, and all new docks must now be constructed according to lines and plans which are specifically laid down by ordinance so that hereafter there will be no indiscriminate dock building, but all docks will be uniform in construction and of certain depth. The Commission has furthermore adopted plans to take all center piers out of the river and has strictly adhered to this policy since said action was decided upon to the great satisfaction of commercial interests which have long deprecated the existence of these obstructions to the free use of the channel. If these improvements had been made in the early eighties, we would not

to-day have any such maritime competitors as Ashtabula, Conneaut and Lorain, and now that they are practically assured and in great part completed there should be no hesitancy in applying the finishing touches. In view of the advanced stages which the operations in the river and inner harbor have reached, however, the efforts of the city may be turned more particularly and aggressively now to the improvement of the Lake Front, and this is the intention of the Administration for next year.

DETAILED REPORT OF WORK ACCOMPLISHED.

The River and Lake Front Commission has held frequent sessions from the time of appointment, having primarily divided the river channel into sections beginning at the river's mouth, then proceeding upwards and taking up the discussion in a systematic and orderly manner. Through the efforts of those interested the United States Government was induced to set aside three and one-fourth millions of dollars for the improvement of the outer harbor to be used through a period of years while the State Legislature at its last Session authorized the issuance of \$500,000 bonds for the city's use in improving its portion of the inner harbor and river. The Commission early decided that it would be best to provide one large, adequate mouth to the river than to continue the two smaller outlets, this portion of the channel being thronged and wholly overtaxed during the rush of navigation by large ore and lumber vessels, some of which passed through it on their way to the old river bed docks and others on their way to the lumber and ore docks farther up the river and by the many passenger and merchant vessels, and pleasure boats going in and out on their daily trips, the entire number of vessels, entering and clearing at the port of Cleveland each season being about 8,000. In carrying out this project the Commission was aided by land conveyed to the city by the Lake Shore & Michigan Southern Railway Company in connection with the railway bridge transaction at the old river bed. A great deal of time was consumed and a large amount of money expended in the acquiring of other property at the mouth of the river desired for the government improvements, but all the parcels except that owned by the Pennsylvania Company have been

obtained by the city and all the land north of the Pennsylvania Company's section to the mouth of the river has been transferred to the government which is now ready to proceed through the government engineer, Col. Jared A. Smith, as soon as opportunity will allow to widen the river mouth to twice its present width. So far as the question of property is concerned it might be stated that all of the land desired for river widening purposes from the Valley Railway bridge No. 2 to the old river bed has been obtained with the exception of three small parcels.

During the summer of 1897 the work of removing old docks and dredging the channel between the Main street bridge and the Superior street viaduct was undertaken and completed, making the channel 86 feet wider for a distance of 400 feet and an average of 60 feet wider for a distance of 480 feet. This gives an average width of channel of 276 feet, in comparison with 180 feet in the narrowest place as formerly. This section has been provided with new and improved docks and is now of sufficient width to allow several of the largest vessels to pass to and fro at one time in safety, thus relieving the congested condition in a portion of the channel which has been under public condemnation for years owing to its narrowness and danger of accident and constant delay and annoyance in traffic. The acquiring of property along the line of this improvement was difficult and necessarily called for the expenditure of a large amount of money.

Extensive improvements in the old river bed are also being made by the Lake Shore & Michigan Southern Railway Company under an agreement with the city whereby the company is permitted to build a steel bridge and permanently maintain it instead of building a swing bridge as originally provided in an old ordinance passed by the Council.

These improvements consist of an opening 100 feet wide into Lake Erie, giving the public a sixty-foot water-way and a forty-foot street, the latter to be properly docked and maintained—this being an improvement agitated for perhaps a quarter of a century by residents of the West Side. Furthermore, the company is constructing a winding place for vessels 350 feet long and 150 feet wide with no expense to the city. Altogether these improvements in the old river bed will be of incalculable value in extending the facilities of that overcrowded passageway from

the river channel proper to the large docks to which the most cumbersome vessels on the lakes ply their course. Added to the foregoing improvements which on account of their commanding importance take precedence, other smaller, but nevertheless essential alterations have been made. The troublesome bend in the old river bed about 800 feet west of the Willow street bridge has been straightened and enlarged. In the upper river new docks have been built and the river widened between Seneca and Mahoning streets, making it an average of 142 feet wide instead of an average of 100 feet. The channel was also projected last year to a point farther up than ever before, enabling vessels to reach the docks of the various provision companies—an accomplishment appreciated by all concerned. The entire channel of the river from its mouth to the Jefferson street bridge on the south was dredged a foot deeper and from 30% to 50% wider in 1897 than ever before, greatly increasing its utility for the passage of vessels.

The work contemplated for next year comprises the completion of operations at and near the mouth of the river, land for which is now practically acquired; the widening of the river from Center street under the viaduct to the completed improvement; the straightening of "Collision Bend;" the straightening of the channel at Jefferson street, and other minor improvements in the upper channel. With these accomplished no further improvements in the Cuyahoga river will probably be needed for many years to come.

IMPROVEMENTS ON THE LAKE FRONT.

Every one familiar with maritime affairs in Cleveland knows of the great demand manifest in recent years for landing places on the lake front both east and west of the Cuyahoga river. In order to meet this demand and at the same time utilize what is considered the greatest natural advantage possessed by this city, the River and Lake Front Commission early completed plans for the elaborate improvement of the eastern portion referred to. These plans comprised the building of a northern approach to the bridge across the railroad tracks at Erie street and the extension of a double pier out into the lake for a distance of about

1300 feet; the building of a bridge across the railroad tracks at the foot of Seneca street fully half a mile west of Erie street, and the construction of a pier also at this point; the connecting of the ends of these piers by a pile and timber protection built parallel to the shore line, thus making a vast enclosure to be filled in with dirt and other refuse material hauled from various parts of the city in wagons across the bridges and dumped at the water's edge,—the ultimate design being to some day have land which will be owned by the city extending from the present shore line northward to where will stand docks with slips between them sufficient for large vessels to lie alongside.

The work of building the pier at Erie street has been pushed until it has reached the distance of 1140 feet. A pile and timber protection has been built parallel with the shore, 234 feet therefrom, for a distance of 731 feet toward the west. Within the inclosure made by this piling, the pier and the shore, a large quantity of dirt has been dumped during the last two years and it is now practically filled. The hope and intention of the city is to fill in the entire space extending from Seneca to Erie streets to a line connecting the ends of the piers at such points. The made land between the future docks and the present shore line will approximate $64\frac{1}{4}$ acres, and may eventually be made into a magnificent park. It is the desire to continue the improvements at this point as rapidly as possible, and to this end special attention will be given to them during the coming season, when an effort will be made to complete the extension of the pile protection to Seneca street and build two docks for the landing of pleasure boats and other craft. Necessarily the advancement of this great undertaking will call for a considerable outlay of money, but the investment will more than pay the city in the great value of the land thus acquired for dockage purposes, to say nothing about the vast acreage which can be utilized for a lake front park.

Another enterprise which we desire to take up during the coming year is the building of docks at Willson avenue, the center of a large and important manufacturing district. The natural facilities at this point for both freight and passenger traffic are apparent at a glance, and no more popular move could be made than to supply the already pressing demand.

FUNDS NEEDED.

Taking into consideration all of the needs above referred to and the existing status of affairs for the improvement of the lake front as well as the completion of those now under way in the river, based on a recent report of the Chief Engineer, I would recommend that authority be granted the city to issue \$1,000,000 additional bonds for these purposes, believing that no investment of any character can add so much to the general advancement and commercial development of our city.

INTERCEPTING SEWER SYSTEM.

Marked progress has been made during the last year and a half in advancing work on the comprehensive intercepting sewer system recommended for this city by the expert commission in 1895. This system, as all are aware, is to consist of a large trunk sewer, extending along the entire lake front from the western limits of the city, and a central trunk sewer bisecting the city and connecting with the lake front interceptor, the outlet for the system being located east of the city limits and far removed from the course of the water supply. A portion of this great conduit known as the West End Interceptor was undertaken early last summer and completed from Alger street to Lake avenue, a distance of about a mile. This section of the sewer is 7½ feet in diameter.

It is proposed to complete the construction of the intercepting sewer on the West Side next season by continuing an additional section east from Alger street to Waverly avenue with a temporary outlet at Waverly avenue to Lake Erie. We are now ready to let the contract for the construction of the western terminus of the interceptor from the intersection of the Lake Shore & Michigan Southern Railway and Lake avenue, west on Lake avenue to the city limits. This interceptor will receive the output of a large number of lateral main sewers and will afford relief to the overcrowded and inadequate sewer facilities for the entire section of the city west of Waverly avenue, as well as relieving a considerable section east of said street, in fact all of that territory west of Pearl street and north of Lorain street, giving

it permanent and adequate sewer privileges. In addition to the work contemplated on the West Side for the year 1898, the construction of a portion of the intercepting sewer east of the river will also be undertaken and completed.

Land for the terminal works several miles east of the city was acquired last winter, and the construction of the terminal facilities will be effected next season. The building of the interceptor from the city terminal point to Doan street will be pushed as rapidly as possible, and a lateral main interceptor will be constructed in Doan street from St. Clair street south, giving permanent relief to the entire eastern and southeastern sections of the city. Another section of the east interceptor which it is intended to build next season is that between Muirson and Water streets. This portion of the business section of the city has long been in need of relief, nearly all of the down-town sewers being wholly inadequate to the demands made upon them. By the construction of this portion of the interceptor this entire section will be greatly benefited. By pushing to completion the sections of the intercepting sewer thus referred to a long stride toward ultimate realization of the plans now under way will have been taken, and at the same time relief will be afforded, through the construction of lateral sewers, to those portions of the city which are now in greatest need of it.

THE WALWORTH SEWER.

While a portion of the money obtained from the bond issue authorized two years ago has been expended on the western interceptor, by far the greatest part has been devoted to the building of the Walworth street interceptor, which is a part of the great central sewer comprising the intercepting system under construction. The Walworth street sewer is to be three miles in length, and for purposes of convenience in building, it has been divided into four sections, three of these sections are now under contract and partially completed. The diameter of the sewer will range from 8 to 16½ feet, the sewer being classed among the greatest in the world. It will last for many generations, and will take care of the sewage of the larger part of the West and South Sides, or an area of over 3,000 acres—nearly one-sixth of the entire city. The foundation and a portion of the side walls

are of concrete, and the remaining parts of the sewer of brick. It would be interesting to our citizens generally to inspect this sewer and gain a correct idea of the benefit it will be to this thickly populated section of the city. The commencement of work on the sewer early in 1897 was made the signal for a grand demonstration, arranged jointly by citizens of the West and South Sides. The three sections will unquestionably be finished by the fall of 1898. The cost of the entire improvement was originally estimated at nearly \$900,000, but the bids have been much lower than expected, and it is now evident that the work will be done for \$700,000. The construction of this sewer will incidentally prove of great value as a health measure, and a rough and almost useless gully will at the same time be transformed into a modern and useful street.

FUNDS NEEDED FOR SEWERS.

In order that the work under contemplation for intercepting sewers may be wisely and satisfactorily advanced during the next two years, I would advise that authority be given the city by the State Legislature to issue \$1,000,000 additional bonds for this purpose. This will permanently establish the system proposed by the expert commission, giving to Cleveland the relief now demanded, and when completed, will rid the entire Lake Front of the almost innumerable small sewers which now infest it.

DIVERSION OF GIDDINGS BROOK.

For a long time residents of the eastern portion of the city have been petitioning for the abandonment of Giddings Brook, which is a constant menace to the public health in that section of the municipality. This stream should be diverted without delay into Doan Brook. Besides greatly improving the health conditions in that locality, this alteration will afford needed relief to the Cedar avenue, Woodland avenue, Euclid avenue, Superior street and St. Clair street sewers, which are now taxed beyond their capacity, thus giving the citizens through this entire belt of territory adequate sewer privileges.

I would therefore recommend that a bond issue of \$50,000. be allowed the city by the Legislature for this important work,

so that it may be undertaken and completed during the coming season.

THE EXTENSION OF WATER WORKS.

Authority was granted by the last Legislature to the city to build a new water tunnel. This was in accordance with the recommendation of the expert sanitary commission for providing increased facilities, as well as a purer supply and insurance against water famine to the city. A site of seven acres of land for a new pumping station was obtained at the foot of Coe street and bids were received for the tunnel to extend five miles into the lake from this point. Work was commenced on the tunnel on October 10th, 1896, when a shaft over 100 feet deep was sunk near the water's edge, and the tunneling out of an aqueduct nine feet in diameter under the lake was begun. About a mile of the tunnel is now constructed. It is estimated by the contractor that a year and a half or two years at the farthest will be required for the completion of the undertaking. Two temporary cribs have been constructed and lodged in the lake on the line of the tunnel in order to facilitate its progress, and a modern steel inlet crib is nearing completion for use when the tunnel is finished. A portion of the expense of this improvement is being supplied from earnings of the Water Works Department. It will not be necessary to ask for any additional legislation in the interest of the improvement.

The building of this tunnel is of great importance to the health of our citizens, and they would be well repaid for a visit of inspection to it, the experience of traveling far out under the lake, at the same time being novel and interesting.

BRIDGES.

Few cities in the United States are compelled to expend as much money annually for bridges and their maintenance as is the City of Cleveland. Owing to the fact that the city is divided by the Cuyahoga river, and that its surface is otherwise broken by smaller streams and consequent hills and valleys, the outlay in this respect is large.

At the last session of the Legislature authority was granted the city to issue bonds to the amount of \$250,000 for bridges. The most important structure built under this appropriation was the Willow street bridge, crossing the old river bed, a short distance from its opening into the Cuyahoga river, and connecting what is known as Whisky Island with the main land. The new bridge replaced a temporary wooden structure built in 1889 and intended for a few years use. The old bridge rested on a center pier near the middle of the channel, and its underside was only 6½ feet above the surface of the water. The new bridge rests on a pier located on the north side of the channel, leaving a clear opening of 138 feet for the passage of vessels. It has a swing span of 295 feet and is operated by two thirty-five horse power motors. Its cost was \$67,000, with \$26,100 added for the purchase of land.

Through this legislative appropriation the city was also enabled to enter into an arrangement for the construction of a viaduct over the Nickle Plate tracks at Willson avenue. This viaduct, which is to be a steel and iron structure of modern design, is now under construction. It is to be 1,100 feet long, extending from Francis to Julia street, and spanning a valley formerly traversed by thousands of pedestrians and teams each day. The Nickle Plate Railroad Company was induced to construct the greater portion of this bridge, at a cost of \$90,000. The Cleveland Electric Railroad Company also contributed \$10,000 towards the project, this company desiring to cross the bridge with its tracks.

Under the same legislative appropriation the Seneca street wooden bridge giving access to the Lake Front was built at a cost of \$7,800. The proposed new Center street bridge, which is to replace the present structure of twenty-five years' standing, obviating the center pier, has also called for an expenditure thus far of \$17,000 for land.

FUNDS NEEDED FOR BRIDGES.

According to a statement made by Chief Engineer Rawson the city will need \$250,000 to properly care for the construction, re-construction and maintenance of bridges for the next two

years. This will provide for the Willett street viaduct, the Martin-Praha street bridge, the Main street bridge, the Center street bridge, the Warner Road arch and culvert, and the reconstruction and repair of other bridges. I would therefore recommend that authority be obtained to issue the amount of bonds named in Mr. Rawson's report.

GARBAGE DISPOSAL.

A great deal of attention has been given in recent years to the provision of a sanitary means of disposing of the garbage and refuse of Cleveland. The consideration of this problem has been in the hands of a commission of citizens, consisting of Mr. J.G.W. Cowles, Mr. Samuel Mather, Dr. W. H. Humiston, Mr. Kaufman Hays, Mr. Henry W. S. Wood, and Councilmen Palmer, Thompson, Steuer and McKenney. A tour of investigation was made early in 1897 by a special committee, which presented an exhaustive report on the results of its observations. Bonds were issued under authority granted by the last Legislature to the amount of \$100,000 and bids were three times received. On the first and second occasions all bids were rejected, but on the third it was decided that the bid of The Buckeye Refuse Destruction Company was as near satisfactory as could be obtained, and this company will undertake to carry out a five year contract with the city. Although the matter was handled very carefully, some members of the commission, namely Mr. Cowles and the Mayor, were not entirely satisfied to permit the letting under the last bid, but it will doubtless work out all right, as the city has the option of owning the plant at the expiration of the contract in 1902.

A CONDUIT SYSTEM.

The recognized wisdom of establishing a comprehensive and complete underground conduit system for police, fire, alarm, telegraph and telephone wires leads me to advise that steps be taken at once for the construction of such system by the city, to be owned by it and space therein to be leased at fixed rentals to the Companies desiring to share its use. It is necessary that this matter should receive attention without delay if it is to be properly

handled. Practically all the wires in the down town district are now underground, and as the city grows and expands the need of an adequate conduit system becomes more and more apparent. In addition, I believe the city can and should receive a return from this class of corporations for use of the streets, as from the surface railroads.

I would therefore recommend that legislation be obtained at Columbus properly covering this subject, enabling the city to equitably obtain exclusive control of its streets and establish a municipal conduit system.

NEW CITY HALL.

The pressing demand for better and more adequate quarters than are now provided for the municipal offices is apparent to all. If there is one thing above another which the general public desires in Cleveland, I believe it is the erection of a new City Hall. Two years ago the people decided by vote to locate a building on the north-east section of the Public Square, but the matter was almost immediately taken into Court by injunction suits, and finally the repeal of all legislation on the subject was obtained by the opponents of this site. Since that time negotiations have been in progress for the securing of another suitable location, and there is reason to believe that such site will be obtained within the near future. It is therefore recommended that action be taken during the present session of the Legislature, giving the city authority to issue bonds for the proposed building. Already the arrangements are made under existing contracts by which these bonds may be cared for by applying the receipts from the Gas Companies of the city to this purpose. The amount of money from this source in the hands of the Sinking Fund Commission to the credit of the City Hall Fund is now \$230,569.50. Assuming that the receipts will increase \$1,000 annually, (which is very considerably less than has been the case to date) this fund will amount to in

1902.....	\$ 627,000.00
1907.....	\$ 877,000 00
1912.....	\$1,352,000.00
1917.....	\$1,753,000.00
1922.....	\$2,177,000.00
1927.....	\$2,627,000.00

Thus thirty year bonds issued in 1898 to the amount of \$2,500,000 could be taken care of so far as principal is concerned, without adding any tax to the present levy. However, I think it is perfectly safe to say that this fund will take care of thirty-year bonds, both principal and interest, to the amount of \$1,500,000 without additional tax to the people. I would therefore recommend that authority be granted by the Legislature to issue the latter amount, which may be sufficient for this purpose, and that the present site be selected and that a suitable structure be erected thereon.

For reasons stated above the entire principal and interest being provided for outside of the tax levy, I would recommend such legislation as will provide for the exclusion of these bonds from the net city debt as provided in Section 2701 of the Revised Statutes.

RECAPITULATION.

In order to properly separate the amounts of desired issues referred to in this statement, and formulate definite recommendations, I would consider the following a safe estimate upon which to base legislative action:

For River and Harbor Improvements.....	\$1,000,000
For Bridges.....	250,000
For Intercepting Sewers	1,000,000
For Diverting Giddings Brook	50,000
	<hr/>
Total	\$2,300,000
For New City Hall, as provided above.....	\$1,500,000

CITY DEBT AND TAX RATE.

When the movement for needed public improvements in this city was started in 1895, a cry of opposition went up in certain quarters that the tax rate would be greatly increased through the proposed undertakings. At that time it was declared by the city administration that such results were not likely to follow, and the facts now apparent in this direction clearly prove the accuracy of such statement. The tax rate for municipal purposes re-

mained the same in 1896 and 1897 as for the preceding two years, namely \$13.70 on each \$1,000 of valuation. I am glad to announce the levy for municipal purposes has been cut down even less than this for 1898, being \$13.60, or lower than it has been since 1886 with one exception. There is, therefore, no cause for alarm in this connection, at least for the present. It must be remembered that the tax rate of a city may be nominally high and yet not excessive upon the real value of property. A 3 per cent. rate where property is valued at thirty-three cents of its actual value amounts to the same thing as a 1 per cent. rate where valuation closely approximates the actual value of property.

Taking the reports made by the city authorities of the percentage which the tax valuation bears to real value in the following cities, the latest statistics available give very interesting results, which I have tabulated as follows:

CITY.	Nominal Tax Rate.	Actual Tax Rate
Cleveland.....	2.93	1.02
Cincinnati.....	2.64	1.56
Pittsburgh.....	1.30	1.30
Detroit.....	1.76	1.32
Baltimore.....	2.00	1.60
Boston.....	1.30	1.30
Buffalo.....	1.41	1.03 $\frac{3}{4}$
Brooklyn.....	2.83	2.83
Louisville.....	1.85	1.48
Milwaukee.....	2.31	1.15 $\frac{1}{2}$
New Orleans.....	2.00	1.42
New York.....	2.10	1.28
Philadelphia.....	1.85	1.38 $\frac{3}{4}$
St. Paul.....	2.14	1.39

It will be seen from the above that the actual tax rate of Cleveland is far below the average of other large cities, being, in fact, more favorable than any other city of its size or relative importance.

The finances of Cleveland are in excellent condition and it is desired that they shall be kept so. According to figures prepared in the offices of the Director of Account, the net city debt on January 1st, 1898, was \$6,991,732.43. The following estimates show what the margins would be between the city debt and the present debt limit at the close of 1898, 1899 and 1900 respectively:

1898.

Net Debt, January 1, 1898	\$ 6,991,732.43	
Pay Bonds, in 1898.....	\$1,036,070.00	
Pay Notes, in 1898.....	305,242.00	
	<u>\$1,341,312.00</u>	
Less Viaduct Bonds, (from Sk. Fd.)		
	\$452,000	
Less Funded Debt Bonds,		
Renew, 218,000	670,000.00	
	<u>671,312.00</u>	
		\$ 6,320,000.00
Increase in 1898, Sewer Dist. B'ds,	\$250,000.00	
St. Imp. Notes,	350,000.00	600,000.00
	<u>6,920,000.00</u>	
Probable accretion of sinking funds	60,000.00	
Probable net debt. January 1, 1898.....	\$ 6,860,000.00	
Debt limit January 1, 1899, estimated.....	10,000,000.00	
	<u>\$ 3,140,000.00</u>	

1899.

Net Debt January 1, 1899	\$ 6,860,000.00	
Pay bonds in 1899.....	\$460,060.00	
Pay notes in 1899	319,940.00	
	<u>\$780,000.00</u>	
Less funded debt bonds, (renew).....	200,000.00	580,000.00
	<u>\$ 6,280,000.00</u>	
Issue in 1899, Sewer dist. bonds.....	\$250,000.00	
St. Imp. Notes	350,000.00	600,000.00
	<u>\$ 6,880,000.00</u>	
Probable accretion of sinking funds	60,000.00	
Probable net debt January 1, 1900.....	\$ 6,820,000.00	
Debt Limit January 1, 1900, estimated.....	10,100,000.00	
	<u>\$ 3,280,000.00</u>	

1900.

Debt, January 1, 1900.....	\$ 6,820,000.00	
Pay bonds in 1900.....	\$404,830.00	
Pay notes	320,170.00	
	<u>\$735,000.00</u>	
Less Bridge Bonds, (renew)	100,000.00	635,000.00
		<u>\$ 6,185,000.00</u>
Issue in 1900, Sewer dist. bonds.....	\$225,000.00	
St. Imp. Notes	350,000.00	575,000.00
		<u>\$6,760,000.00</u>
Probable accretion of Sinking Funds.....		60,000.00
		<u>\$ 6,700,000.00</u>
Probable net debt January 1, 1901.....	\$ 6,700,000.00	
Debt Limit January 1, 1901, estimated	10,200,000.00	
		<u>\$ 3,500,000.00</u>
Reserve.....	\$ 3,500,000.00	

By a conservative and judicious management of the funds of the city, the margins shown above will surely be sufficient to allow of the issuing of bonds from time to time in sufficient amounts to provide for the continuance of the work now under way, which is all that is contemplated, and which was originally mapped out with this end in view by the Citizens' Commission.

The relative position of the city of Cleveland so far as bonded indebtedness and tax rate is concerned with other large cities of the country, also argues well for our own municipality and seems to me to clearly justify the expenditure necessary to provide the city with a complete sewerage system, with better harbor facilities, with safe and modern bridges, with a purer water supply and with a new municipal building. While it is folly to presume that these improvements can be made without any increase of the bonded indebtedness of the city, it is, nevertheless, essential that there shall be no unwarranted extravagance in the public funds, nor on the other hand should the city be forced to occupy an inferior position for a lack of enterprise and public spiritedness on the part of its citizens. When we analyze the condition of other large cities and compare their indebtedness with that of Cleveland, we are easily convinced

that these other cities have assumed burdens which as yet we have never known and probably never will.

In deciding the question of what is best in Cleveland, we must be guided in a part by what other cities have done. If Cleveland is in a better position relatively than cities of the same class, so far as taxation and indebtedness go, then she can safely compete with them in attracting capital even if her indebtedness and tax rate should be somewhat increased. The following figures are the result of inquiries made within the last month from the Mayors or City Auditors of the cities named, and are therefore considered reliable. With one or two exceptions, no American city of 200,000 population or over has as small a debt as Cleveland. The average valuation of personal and real property in Cleveland is about 35 per cent. of its actual value, and the tax rate for all purposes, 2.93 per cent. Were property assessed for taxation at its real value in the city, as is contemplated by the State constitution, it would exceed \$400,000,000.

The same limit exists upon *Pittsburgh's* indebtedness as upon Cleveland's. It must be kept within 7 per cent. of the valuation. At the present time it is 4.6 per cent. of the valuation, while Cleveland's to-day is 5 per cent. Were the valuation of property for taxation in Cleveland its actual value, or 100 per cent., as is the case in Pittsburgh, we could carry a debt of over \$27,000,000 and still be within the 7 per cent. limit.

In other words, our present debt would be 1.8 per cent. of the real value instead of 5 per cent. Relative to the actual value of property in the two cities, Pittsburgh's indebtedness is a little over $2\frac{1}{2}$ times that of Cleveland.

What is true of Pittsburgh applies to every other great city in America. Cleveland's debt is smaller relatively than that of any other American city of the same size or larger. *Baltimore* has an indebtedness of nearly \$16,000,000 or 4.01 per cent. of the tax valuation. Her city officials report that the tax valuation of property is 80 per cent. of the real value; this being true, the indebtedness of Baltimore is 3.2 per cent. upon the real valuation of her property, or nearly double that of Cleveland.

The valuation of property for taxation in the city of *Boston* is \$1,012,557,256. Her officials report that this is 100 per cent. of the real value. In other words, property is assessed at ap-

proximately its actual value for taxation. Her indebtedness is \$50,340,115.37 or 4.97 per cent. of the valuation. In other words, in proportion to the valuation of property, it is almost three times as great as the indebtedness of Cleveland. Cleveland could carry \$17,000,000 of indebtedness and still have no greater debt in proportion than Boston.

The valuation of property for taxation in *Cincinnati* is \$198,536,580. Her indebtedness is \$25,951,348.65, or more than 13 per cent. A large part of this, however, is provided for by bonds of the Cincinnati Southern Railway Company, and the money was expended for the construction of that road. The tax valuation is reported by her city officials to be 59 per cent. of the actual value. On the same basis as Cincinnati, Cleveland could carry \$25,000,000 of indebtedness, or four times as much as at present.

Brooklyn, N. Y., has an indebtedness of nearly \$57,000,000 upon a tax valuation of \$603,796,463, or 9.43 per cent. of the tax valuation. Property is valued at 100 per cent. of its actual value, so that the indebtedness of the city amounts to 9.43 per cent. of the real value of the property in the city. This is an indebtedness in proportion to actual property valuation, $5\frac{1}{2}$ times as great as that of Cleveland. In other words, Cleveland on the basis of Brooklyn's debt, could carry \$38,000,000 of indebtedness.

The city of *Philadelphia* has \$35,479,579.93 of indebtedness, and the taxable valuation of property is \$840,000,000. The debt is 4.2 per cent. on the duplicate and the taxable valuation of property is about 75 per cent. of its actual value. In other words, the indebtedness of Philadelphia is 3.15 per cent. upon the real value of the property or 44 per cent. greater than Cleveland. Cleveland could carry nearly \$10,000,000 of indebtedness and still be no more heavily burdened, proportionately than is the City of Brotherly Love.

The city of *New York*, the national metropolis, has an indebtedness of nearly \$130,000,000. The debt is 5.9 per cent. of the tax duplicate. The duplicate is estimated to represent about 60 per cent. of the actual value of property. In other words the indebtedness is 3.6 per cent. of the real value of property, or twice as great as that of Cleveland. The City of Cleveland could

incur an indebtedness of \$12,000,000 and still be no more heavily burdened in proportion than is the City of New York.

On the basis of *New Orleans'* indebtedness, Cleveland could incur a debt of \$28,000,000, and on the basis of *St. Paul's* indebtedness \$17,000,000.

The following table gives in detail comparisons between fourteen of the leading cities of the United States in a form convenient for ready reference, and its perusal cannot fail to convince the reader that Cleveland is in a better position in pushing great public improvements than possibly any of the cities mentioned. The only city with which Cleveland does not compare favorably in the amount of indebtedness is Detroit, and had the City of the Straits been compelled to build bridges as Cleveland has, her debt would exceed ours. Her small debt is not due to better financial management, but to the fact that fewer and less costly public improvements have been made:

CITY.	TAX RATE.	Estimated Population.	NET DEBT.	VALUATION.	Per cent. of Valua- tion to Actual.
Baltimore.....	\$2.00	625,270	\$15,833,875.87	\$ 394,111,798	80%
Boston.....	1.30	550,000	50,340,115.37	1,012,557,256	100%
Buffalo.....	1.41	340,000	12,007,094.79	247,385,295	70%
Brooklyn.....	2.83	1,180,000	56,948,097.00	603,796,463	100%
Cincinnati.....	2.64	25,951,248.65	198,536,580	59%
Cleveland	2.93	360,000	6,995,582.43	138,000,000	35%
Detroit.....	1.76	326,800	3,489,722.50	241,115,706	75%
Louisville	1.85	215,000	8,616,000.00	118,000,000	80%
Milwaukee	2.31	275,000	6,588,000.00	144,684,425	50%
New Orleans...	2.00	300,000	14,543,790.00	140,823,481	71%
New York.....	2.10	2,003,000	129,781,903.14	2,168,635,856	60%
Philadelphia..	1.85	1,350,000	35,479,579.93	840,000,000	75%
Pittsburgh	1.30	287,500	12,134,555.29	258,828,334	100%
St. Paul.....	2.14	160,000	8,332,100.00	92,690,510	65%

CONCLUSION.

In advocating the expenditures referred to in the foregoing statement, my desire is to simply provide for the demands of our rapidly growing city, which demands have been seriously neglected to the city's detriment, I believe, in the past. There is nothing in the way of improvement that can make this city better than the people are not entitled to and do not want. The

Cleveland public is not niggardly nor parsimonious, but realizes, I am convinced, that a metropolitan city cannot be confined in village lines. A city is like an individual,—it must either go forward or backward. Growth is an element of progress; stagnation is an element of death.

The Cleveland of today, so far as extent and population is concerned, is a far different city from the Cleveland of fifteen or twenty years ago; nevertheless, little has been done to meet the requirements of its added greatness. While this city in the last thirty years has outclassed and surpassed in industrial standing the cities of Washington, Detroit, San Francisco, New Orleans, Buffalo, Louisville, Pittsburgh and Cincinnati, the time has come when attention must be given to needed improvements, if our proud station is to be maintained. The freight in this port is nearly 6,000,000 tons each year. At the present time, more than 5,000,000 tons are loaded and unloaded up the river. From that I draw the conclusion that the river is of the greatest importance, and we are doing everything to improve it. The fulfillment of plans in this connection is only blocked by the attitude of the Pennsylvania Company, in claiming the ownership of a piece of land which is directly in the way of our improvements. The company refused to arbitrate or do anything else. There is but one course open, and that is for the government to take the bull by the horns and compel the Pennsylvania Company to give up the land. The lake tonnage in Cleveland represents more than \$20,000,000, surpassing every American city except New York. The distributing equipment in the iron ore industry represents an actual investment of over \$80,000,000, this being naturally the greatest ore port in the world. Cleveland is the largest ship builder, save Liverpool. Her manufacturing establishments are unequalled and unexcelled in diversity and capacity. She is the economic center for the manufacture of iron and steel and other products. For the years 1894, 1895 and 1896 over \$15,000,000 was expended for buildings within the municipality.

The recital of such facts as the foregoing emphasizes the point that the contemplated expenditures for public improvements are small when compared with the vast interests which are benefited. For the expenditures already made, are not the results apparent? Our river and lake front improvements are

rapidly bringing our inner and outer harbor to the forefront among maritime cities. Our intercepting sewer system will give the city the best of drainage and sanitation. The new water tunnel will afford the best water supply of any American city. Our garbage disposal system will be modelled after the best modern methods. Our bridges and viaducts are far-famed, and should be kept so. Then our park system—this, too, as now contemplated and being constructed will give to our citizens and visiting guests the finest pleasure resorts of any American city. In addition to all these there should be no hesitancy in advancing every needed enterprise which will tend to upbuild and benefit this great municipality.

Speaking from a financial and business standpoint the credit of Cleveland is of the highest. Her bonds find a market as ready as those of any other city in America, in fact, a market far above that of most cities. The bonds issued in 1896 were sold on a $3\frac{5}{8}$ basis—that is, the premiums paid reduced the required interest from the city to this amount, while in 1897 the average sales were on a $3\frac{1}{2}$ basis; the latest sales to be made even reaching a $3\frac{1}{4}$ basis.

If in the approaching season of activity the era of progress upon which the city has entered shall be still further advanced, if all the citizens co-operate in the advancement of the common good of the municipality and join in those undertakings which will be of mutual benefit to all, the City of Cleveland will reach a position yet higher among the first cities of the land and will be in a good condition for the opening of the new century.

ROBERT E. MCKISSON,
Mayor of Cleveland.

STATEMENT.

The matters contained in the foregoing address were fully considered at meetings of sub-committees to which they were referred. Reports were drafted and were presented to the General Citizens' Committee, at a meeting held on February 14, 1898, in the Mayor's Office. There were present at this meeting the following citizens:

J. W. Conger, W. M. Day, C. J. Manix, Col. A. T. Van-Tassel, E. M. Folsom, T. W. Hill, A. G. Carpenter, H. W. S. Wood, Julius Feiss, Judge F. E. Dellenbaugh, John Meckes, Louis N. Weber, Milton Morton, and the Mayor, City Engineer Rawson, Assistant Engineer Force, and Deputy Auditor Crosby.

After carefully reviewing the deductions made by the sub-committees as well as their recommendations, the General Committee unanimously approved and adopted the reports which are found in full on the following pages.

REPORT

—OF—

CITIZENS' COMMITTEE ON RIVER AND LAKE FRONT IMPROVEMENTS.

Presented to General Citizens' Committee on Public Improvements and Unanimously Approved and Adopted

February 14, 1898.

TO THE CITIZENS' COMMITTEE ON PUBLIC IMPROVEMENTS :

GENTLEMEN :

The undersigned members of your sub-committee appointed by the Mayor to consider the question of River and Lake Front Improvements; to examine more especially the manner in which the funds formerly obtained have been expended; and to submit recommendations relative to proposed additional expenditures for carrying on work now under way, beg leave to report as follows :

While some of the members of your committee were already familiar with the status of the improvements, having served on the advisory commission which co-operated with the city administration in planning and executing them, and other members were well informed as to their progress, yet a careful and systematic review of the situation has been made and such conclusions as have been reached are based thereon. The work of the committee has been expedited and simplified by access to detailed reports submitted by Deputy Auditor Crosby and City Engineer Rawson, the former dealing with the financial aspect of the question in hand and the latter with plans and maps showing what has been accomplished and what yet remains to be done.

From our study and observation of the improvements in the channel of the Cuyahoga river, we are convinced that the money expended in this connection has been wisely and economically

administered by the city officers and the River and Lake Front Commission. Two years ago practically no improvements of a permanent character had been made, the narrowness of the river being a subject of general condemnation by marine and shipping interests of our city. By applying a portion of the funds secured through authority of the last Legislature, to widening and straightening this stream, a passage-way for vessels hitherto unrealized has been made. The results accomplished were clearly and concisely set forth in the Mayor's Address to the Citizens' Committee on January 28, which results, your sub-committee is convinced, are abundant proof that none of the money has been used ill-advisedly. We believe that if the plans now adopted are carried out, this important highway for inter-urban commerce will be placed in excellent condition to meet the demands to be made upon it by the rapidly increasing traffic to and from this city, for many years to come.

As for the money expended on improvements at the foot of Erie street, on the Lake Front, we are satisfied that it must be regarded as an investment which will bring the city great return in after years, the creation of landing places for vessels at this point being an enterprise to be generally commended from a business and financial standpoint. The older Cleveland is gradually but rapidly developing into a great metropolis, and the energies of municipal administrations may, in our judgment, well be turned to the extending of its capabilities and the enhancing of its attractions to commerce. We heartily approve the operations now in progress on the Lake Front and coincide with the Mayor in his recommendation that these improvements should receive special consideration from this time forth. When finally completed the Lake Front improvement now under way will give to the city, according to Engineer Rawson's estimate, sixty five acres of land admirably located for park or exposition purposes, or any other use to which the city may decide to put it, this land being worth many millions of dollars.

Your sub-committee, as the result of its deliberations, would therefore report briefly its conclusions and recommendations for your consideration as follows :

FIRST. That we approve the plans adopted by the Citizens' River and Lake Front Commission, as constituted heretofore, or the improvement of the Cuyahoga river and the Lake Front, believing these plans to have been wisely and properly laid.

SECOND. That we approve the expenditures made under the former legislative appropriation, and account the results accomplished fully commensurate with the outlay of funds.

THIRD. That we concur in the recommendation of the Mayor for continuing the improvements now under way unto as speedy completion as possible, realizing their importance to the commercial interests of our city.

FOURTH. That in order to provide funds necessary to carry forward this work, we recommend to the Cuyahoga delegation in the General Assembly that they use their best efforts to obtain for the city authority to issue \$1,000,000 additional bonds.

FIFTH. That in pursuance of the foregoing recommendations a bill similar to that passed at the last previous session of the General Assembly be drafted and introduced at as early a date as may be deemed advisable.

By way of conclusion your sub-committee desires to say that in its opinion the prosecution of the improvements referred to in this report will redound to our city's continued prosperity and militate toward its still greater growth and development. Plans are now under way for extensive improvements by the general government in the outer harbor, the sum of \$300,000 having been recommended for this work, in 1898, and it will be well for the federal and municipal enterprises to go hand in hand for the betterment of existing conditions. During the past year the lake traffic was by far the largest in the history of the trade. The present tonnage of the Great Lakes (i. e. the carrying capacity of vessels) is 1,410,000 or nearly one-third of the entire American merchant marine. The total tonnage handled at the port of Cleveland during 1896 was 5,332,656 tons, while the total tonnage for 1897 was 6,116,878 tons. The total value of freight, coastwise and foreign, handled at this port was \$650,084,589. When the immense interests at stake are considered, the appropriation recommended by your committee is small, we think, in comparison with the great advantages to be gained by making the improvements.

Your sub-committee, however, realizing the importance of the work on the Lake Front and the river bed below the Center street bridge, recommend that the improvement of the river above the Center street bridge be confined to such improvements as may be actually necessary, and that the treatment of the river

from the point named to the Lake, and the Old River Bed and the Lake Front, receive first attention at the hands of the city authorities.

REPORT

—OF—

CITIZENS' COMMITTEE ON INTERCEPTING SEWERS, AND THE DIVERSION OF GIDDINGS BROOK.

Presented to General Citizens' Committee on Public Improve-
ments, and Unanimously Approved and Adopted
February 14, 1898.

TO THE CITIZENS' COMMITTEE ON PUBLIC IMPROVEMENTS:

GENTLEMEN:

Your sub-committee appointed to examine into the advisability of obtaining authority from the General Assembly to issue \$1,000,000 additional bonds to provide for the continuance of work on the intercepting sewer system now under way in this city, beg leave to report as follows:

Believing this matter to be of vital importance to the welfare of the citizens, and the future growth and development of our city, the members of your committee have applied themselves to a very careful study of the plans which have been adopted for the relief of the present inadequate sewerage system, and to a review of the work already accomplished in order to arrive at conclusions upon which to base this report. At the first meeting of the committee a detailed statement was presented showing the amounts expended to date in sewer improvements, and outlining various amounts desired for the next two years, and for what purposes. The plans of the city engineers were fully explained with the aid of maps exhibited by Assistant Engineer Force, and the different features of the enterprises were thoroughly discussed at this and subsequent meetings. In our deliberations we have striven to eliminate all sectional prejudices, and rather to consider what is

best for the interests of the entire city and its inhabitants. It has been our purpose not so much to deal with preliminaries, these have been already ably cared for by our predecessors on former commissions, as to pass judgment upon the conduct of the improvements up to date, and to express our opinions touching the wisdom of advancing them along the lines now established. In other words, our duties were regarded by us as judiciary in so far as past actions were concerned, and as advisory with reference to the future.

In harmony with the first Citizens' Commission, appointed by the Mayor to consider public improvements, and with the expert sanitary commission selected in connection therewith, we fully endorse and approve the project for building a main intercepting sewer along the lake front, as now in progress, believing such sewer to be necessary for taking up the output of the many small sewers now running directly to the lake, befouling the entire water frontage, polluting the water supply of the city, and menacing public health. We consider the funds thus far expended on this improvement to have been well directed, and concur with the city administration in starting and pushing the West End interceptor before commencing portions elsewhere, this being in keeping with the contract entered into by the city when the village of West Cleveland was annexed. We agree with the city engineers in their proposal to undertake the extension of this section of the interceptor, this season, east from Algier street to Waverly avenue, and to build the Lake avenue section from the intersection of the L. S. & M. S. Railway to Lake avenue, west on Lake avenue to the city limits, thus laying the foundation for adequate sewer facilities for the rapidly growing district west of Pearl street and north of Lorain street. We are satisfied that work should also be undertaken upon the terminal facilities east of the city, and upon the eastern portion of this great sewer, and consider the proposed section from the city terminal point to Doan street, with a lateral main sewer in Doan street, from St. Clair street south, and another section between Murison street and Water street as of first importance.

As to the wisdom of building the Walworth sewer there has never been any doubt, the public having long demanded it as a relief and sanitary measure. While the cost of this sewer was estimated at \$800,000 it is now apparent from bids received that it will call for a little more than \$700,000. It is the opinion of your committee that this sewer, when completed, will be regarded

as a good investment not only for the vast extent of territory directly benefitted, but for the city at large. We find this improvement in a healthy state of progress, and believe that it is being well and satisfactorily managed.

A matter to which your committee has also directed its attention is the proposed diversion of Giddings Brook into Doan Brook. After examining this question from various standpoints we have concluded that this alteration is necessary as a health measure, and in order that relief may be afforded to the Cedar avenue, Woodland avenue, Euclid avenue, Superior street, and St. Clair street sewers, which are now taxed beyond their capacity.

Without burdening this report with detailed recitals of facts heretofore covered by previous committees, we would summarize our recommendations briefly as follows :

1. We approve the plans formerly adopted by the Citizens' Commission and the Council for the construction of the intercepting sewer system, believing that notwithstanding its considerable cost, the city will be fully compensated by the increased facilities afforded and the sanitary benefits to be derived, and that the wisdom of the authors will become more and more apparent as time goes on. We also approve the construction of the Walworth sewer according to the plans which are now being followed.

2. We believe, from our examinations, that the money obtained from bond issues to date in behalf of these improvements has been economically expended, and that the results are such as to meet the expectations of the tax-payers and general public.

3. We agree with the city administration in the proposed advancement of these improvements during the coming season, and assert our belief that the work laid out for 1898-99 is well chosen.

4. Knowing that great improvements of this character cannot be made without funds, and believing it to have been the intention of the original commission that authority to issue additional bonds should be asked as the progress of work might demand, we would recommend in accordance with estimates presented, that authority to issue \$1,000,000 additional bonds for sewer improvements be obtained from the State Legislature and that a bill similar to the one presented two years ago be introduced and passed.

5. In order to provide for the diversion of Giddings Brook we would further recommend that a bond issue of \$50,000 be allowed the city for this purpose, and that this important work may be undertaken and completed during the coming season.

While to some persons the issuance of bonds in accordance with these recommendations may seem somewhat extravagant, yet it must be remembered that other cities are making rapid strides and that Cleveland must not retain its village lines. The time has arrived for considering these questions on the proper plane of civic needs and civic patriotism. Although much has been done during the past two years in the way of public improvements much yet remains to be done, and all citizens, we believe, should work to a common end neither allowing personal interests nor personal animosities to interfere. What it is desired to do is to make Cleveland a better city in which to live. In this effort the various improvements now under way are interlinked and interdependent. If we would have a clean harbor we must have an intercepting sewer; and if we would have a pure water supply we must have a clean harbor. When all of the improvements now under way are completed we are sure that there will be cause for congratulation on the part of all citizens, and that whatever burden there may be it would not be comparable with the advantages gained.

Respectfully submitted,

February 14, 1898.

A NEW CITY HALL.

The Citizens of Cleveland Demand it as Shown in the
Following Report by a Representative
Committee.

CITY HALL COMMISSION.

A meeting of a commission of citizens appointed to consider the question of building a new City Hall was held in the Mayor's office Tuesday afternoon, February 22d, in response to the following letter :

"The question of building a new City Hall commensurate with the needs of this municipality has been under discussion for a number of years. At a meeting of citizens held in the Mayor's office recently a plan by which such building may be realized was outlined, and action was taken looking to the further consideration of the matter by a special committee. I have selected you to serve upon this special committee, and hope that you will be able to accept. It has been suggested that Tuesday afternoon, February 22d, at 2 o'clock, will be a good time for the organization of the committee, and I therefore issue this call for that hour.

"I trust that you will make a special effort to be present at this conference, which will take place in the Mayor's office, and give us the benefit of your counsel and advice.

"ROBERT E. MCKISSON."

The following persons were present :

Julius Feiss, Wilson M. Day, V. C. Taylor, Jacob B. Perkins, Major W. J. Gleason, A. H. Weed, Esq., J. W. Conger, Henry W. S. Wood.

Two members were absent : T. W. Hill and James G. Fletcher.

The subject before the meeting was informally discussed for upwards of an hour by the various gentlemen, the unanimous opinion being that the city was in need of a new and adequate municipal building. This feeling was voiced in the following resolution which was adopted :

WHEREAS, There seems to be a general sentiment that the city of Cleveland should own its own municipal building, therefore be it

RESOLVED, That a sub-committee of five be appointed to make such investigations as they may deem advisable relative to the needs of the city in this direction and to suggest ways and means for meeting the same, this sub-committee to report to the general committee on City Hall at a meeting to be called by the Chairman.

After the Session the Mayor appointed as members of the sub-committee Messrs. Conger, Taylor, Perkins, Day and Feiss. These gentlemen fully considered the questions before them and presented the following report which was unanimously adopted by the general committee on February 28. 1898:

REPORT OF COMMITTEE ON CITY HALL.

FEBRUARY 28, 1898.

TO THE COMMITTEE ON CITY HALL.

GENTLEMEN:

Your sub-committee, to which was referred the resolution adopted one week ago calling for an investigation of the needs for a new municipal building and suggestions as to ways and means for obtaining the same, beg leave to report as follows:

First. The present rented quarters are utterly inadequate to meet the needs of today,—our city having outgrown in this respect, as it has in all others, the conditions of twenty-four years ago at which time the present building was constructed and Cleveland was a city of less than 100,000 inhabitants.

Second. The unprotected condition of the public records in the various city departments demands that immediate steps be taken to secure them against loss by fire or other causes, as no one can estimate from a monetary standpoint the enormous loss to the city should these records be destroyed, a danger which is constant under present conditions, and which, far more than any other reason, induces us not only to request, but emphatically urge, as an ordinary business precaution, that immediate steps be taken to render them secure. The only feasible and permanent remedy in our judgment is the erection of a municipal building which shall be fire proof and amply provided with safety vaults.

Third. The city has paid out for rents, taxes and repairs from 1874 to the present time over \$1,050,000.00 The question

as to the amount of money which would have to be annually expended in the future cannot be accurately computed, but we are confident that it would be largely in excess of that expended in past years. We believe, however, that the main question which confronts us and which in our judgment should far outweigh financial considerations is the adequate and absolute protection of public records and documents against loss or destruction.

After a careful personal inspection of the quarters of the various city departments, we have no hesitancy in saying that they are not only undesirable, but a disgrace to a city like Cleveland, emerging as it is from a rural into a metropolitan career.

In regard to the ways and means for procuring a City Hall, we are satisfied that the receipts from the gas companies, provided equally as good a contract as the existing one can be made with them at the time the present contract expires in 1902, will be amply sufficient to pay interest and principal on a bonded indebtedness of a million and a half dollars and leave a surplus in the fund, if we should at the present time issue bonds to the amount of a million and a half dollars drawing 4 per cent. interest, payable in twenty years. (As to the details of which, see appended statement submitted by the city auditor to your committee.)

We are satisfied that a personal inspection of the present city quarters by any citizen will convince him of the necessity for a new municipal building. After carefully looking into the cost of new municipal buildings in a number of other leading cities we are confident that a building and land amply adequate in every respect can be secured for one and a half million dollars. We therefore recommend that immediate steps be taken to secure the erection of a City Hall, the cost of which, including land, shall not exceed that amount, and that bonds bearing 4 per cent. interest be issued for this purpose

JULIUS FEISS.

STATEMENT OF CITY AUDITOR.

FEBRUARY 25, 1898.

MR. J. W. CONGER, Chairman.

DEAR SIR :—I herewith hand you a statement, First, of the condition of the City Hall Sinking Fund at the present time and the probable accretions to same in the future. The city has received from the gas companies up to the present time

Received in 1893.....	\$ 42,113 00
“ “ 1894.....	45,044 48
“ “ 1895.....	50,445 96
“ “ 1896.....	55 462 07
“ “ 1897.....	58,310 97
“ first payment of 1898.....	30 177 16
Earning on same.....	20,251 12
	<hr/>
	\$301,804 76

Should the city this year issue \$1,500,000.00 of four per cent. twenty year bonds, we would in all probability receive on same a premium of \$164 550 00; assuming that they would be sold on a basis of 3¼ per cent. (the last three sales of city bonds have been on this basis or better). Adding to this the amount already in the sinking fund and \$30,000.00 estimated receipts from the gas companies during the balance of the year 1898, and accretion from funds in hands of commissioners, would make an approximate total value of the sinking fund at the end of 1898 of \$502,000.00.

The following tables show you the probable amount which will be received from the gas companies; the interest earned by the City Hall Sinking Fund, estimating the interest at 4 per cent. (whereas in reality it is earning at the present time 5 per cent.); the amount of interest which would be paid out yearly on a million and a half of bonds; the net increase in the value of the City Hall Sinking Fund, and the total value of the same at the end of each year:

	Receipts from Gas Companies.	Interest on Sinking Fund.	Interest on Bonds.	Net Increase in Sinking Fund.	Total Value of Sinking Fund.
1898					\$ 502 000
1899	\$62,000	\$20.080	\$60,000	\$ 22.080	524 000
1900	64,000	20.960	60,000	24,960	548,000
1901	66,000	21.920	60,000	28,920	576,900
1902	68,000	23.076	60,000	31,076	607,900
1903	70,000	24,316	60,000	34,316	642,200
1904	72 000	25 688	60,000	37,688	680,000
1905	74 000	27,200	60,000	41,200	721,200
1906	76,000	28.848	60,000	44,848	766,000
1907	78,000	30,640	60 000	48,640	814,600
1908	80 000	32,584	60,000	52,584	867,200
1909	82 000	34,688	60,000	56,688	923,900
1910	84,000	36,956	60,000	60,956	984,800
1911	86 000	39,392	60,000	65,392	1,050,200
1912	88 000	42 008	60,000	70,000	1,120,200
1913	90,000	44,808	60 000	74,808	1,194,800
1914	92 000	47,792	60,000	79,792	1,274,600
1915	94,000	50,984	60,000	84 984	1,359,600
1916	96 000	54,384	60 000	90,384	1,450,000
1917	98 000	58,000	60,000	96 000	1,546,000
1918	100,000	61,840	60 000	101 840	1,647,840

The estimate of the receipts from the gas companies is based upon the supposition that at the expiration of the present contract in 1902, the city will be able to make a contract with the companies equally as good as the present one, and that the receipts will increase each year \$2,000—while in fact the yearly increase has been in the past nearly \$5,000. From the above table it will be seen that twenty years from the present time the value of the City Hall Sinking Fund will be \$1,647,840, after having taken care of the interest on the bonds issued for City Hall purposes, or in other words, the amount received for the gas companies will have been sufficient to have paid the interest on the bonds issued, pay the bonds at maturity, and leave a surplus of \$147,840 in the fund. So that land could be acquired and a new City Hall built immediately without taxing the people either directly or indirectly for the payment of interest or principal of bonded indebtedness, inasmuch as the fund derived from the gas companies will more than meet all obligations and cannot be used for other purposes.

Second. Of the amount of money paid out by the city for the present City Hall, including rent, taxes and repairs. The

figures for the years 1892, 1893, 1894, 1895 and 1896, 1897 and 1874 are correct. Those for the other years are estimates and cannot be given accurately for the reason that the city records previous to the year 1892 were kept in such shape that it is impossible to give correct figures on these items previous to that time. The amount, however, paid out for rent has been the same for the whole period from 1874 to the present, viz : \$36,000 00 per year.

COST OF CITY HALL.

Year.	Rent and Taxes.	Repairs.	Total.
1897	\$42,210 33	\$2,499 86	\$44,710 19
1896	42,077 97	1,774 68	43,852 65
1895	42,363 92	2,771 93	45,135 85
1894	42,809 92	2,311 92	45,121 84
1893	42,159 21	4,591 85	46,751 06
1892	44,557 18	6,779 60	51,336 78

From 1874 to 1892 I estimate there was paid out annually an average amount of \$40,000; in 1874, according to the Mayor's annual message for that year, there was paid out for rent, \$30,000; and for putting building in suitable condition to be occupied, \$45,061.22. Making a total amount paid out \$1,031,969.59.

We receive for rents at the present time about \$7,000 annually, estimating the receipts for rent during the entire period at \$8,000 annually, would make a total receipt for rent, \$192,000. Deducting this from the amount paid out would leave us a net expenditure of \$840,000 for twenty-four years or an average net annual expenditure of \$35,000.

Respectfully submitted,

H. L. ROSSITER,

City Auditor.

STATEMENT

Showing Value of City Hall Sinking Fund in 1928, after
Having Taken Care of Interest on \$1,500,000
4 Per Cent. 30 Year Bonds.

	Receipts from Gas Companies	Interest on Sinking Fund.	Interest on Bonds.	Net Increase in Sinking Fund.	Total Value of Sinking Fund.
1898	\$ 502,000
1899	\$ 62,000	\$ 20,080	\$60,000	\$ 22,080	524,000
1900	64,000	20,960	60,000	24,960	548,000
1901	66,000	21,968	60,000	27,968	576,900
